

eGuitar

GROUP 7

BRANDON BERK – COMPUTER ENGINEER

WILLIAM REMINGTON – ELECTRICAL ENGINEER

ERIC SOROKOWSKY – COMPUTER ENGINEER

Administrative Introduction

- eGuitar improves the way a user learns or further develops their guitar skills
- Through onboard visual indicators, users can learn finger placements in a tactile way
- Experienced guitar players can record their music into guitar tablature (tabs)
- A PC-side standalone application offers tablature modification and transfer to onboard storage

Goals

- Fully additive system— no permanent or damaging modifications to guitar
- Visual finger placement instructions on guitar fretboard
- Untethered tab playback mode
- Tethered (PC-side) DSP for real-time:
 - Tuning
 - Chord detection
 - Tablature creation
 - Performance feedback
- Intuitive PC user interface

Specifications – Fretboard PCB

| Component | Parameter | Specification |
|-------------------------|-----------|---------------|
| Under-string Components | Height | < 1mm |
| Under-string Components | Width | < 3mm |
| PCB | Material | Flex board |
| PCB | Layers | 1 |

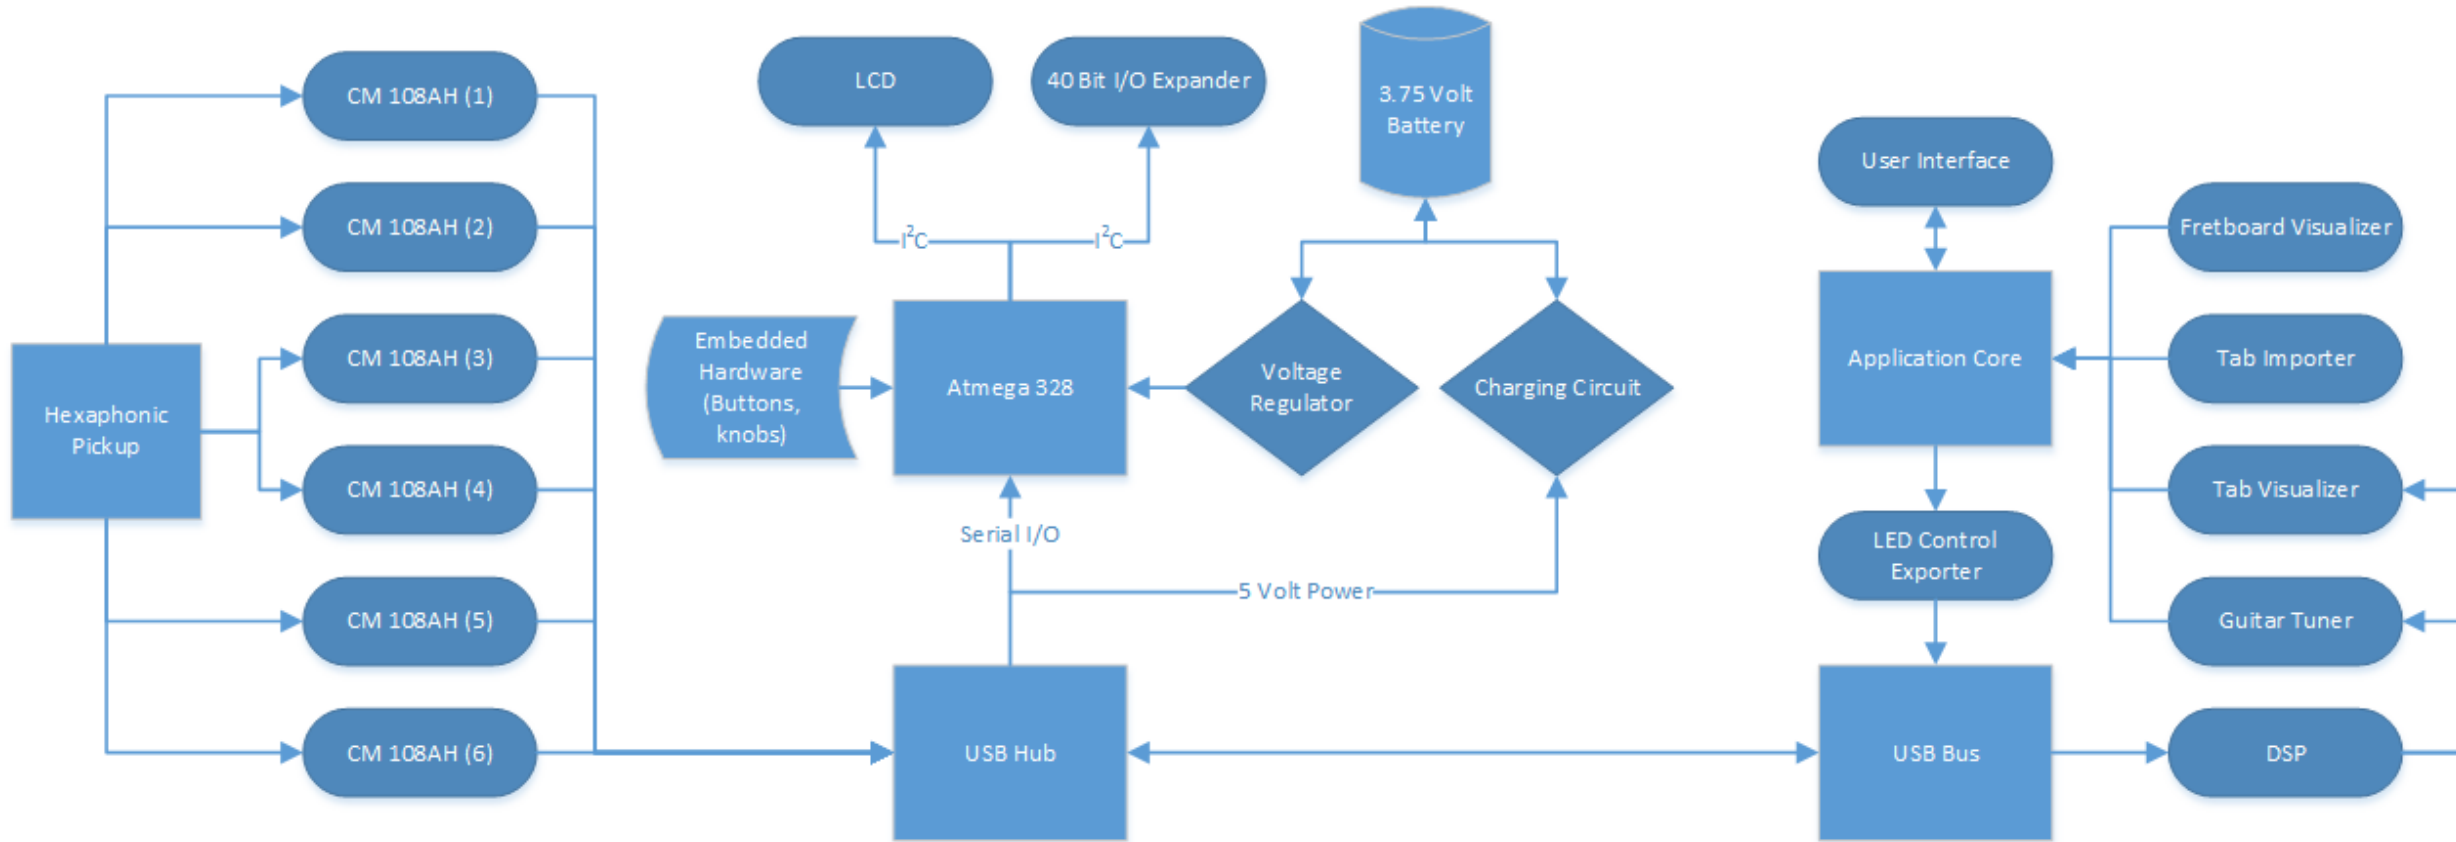

Specifications – Control PCB

| Component | Parameter | Specification |
|------------------------|-------------------------|--------------------------------|
| Primary Microprocessor | Model | ATmega 328 |
| Primary Microprocessor | Clock speed | 16 MHz |
| Primary Microprocessor | Communications Standard | I ² C, RS232 serial |
| PCB | Layers | 2 |
| I/O Control | Outputs | 40 (36 in use) |
| Power | Source | 3.7v Li-ion Battery |
| Power | Voltage | 5v |

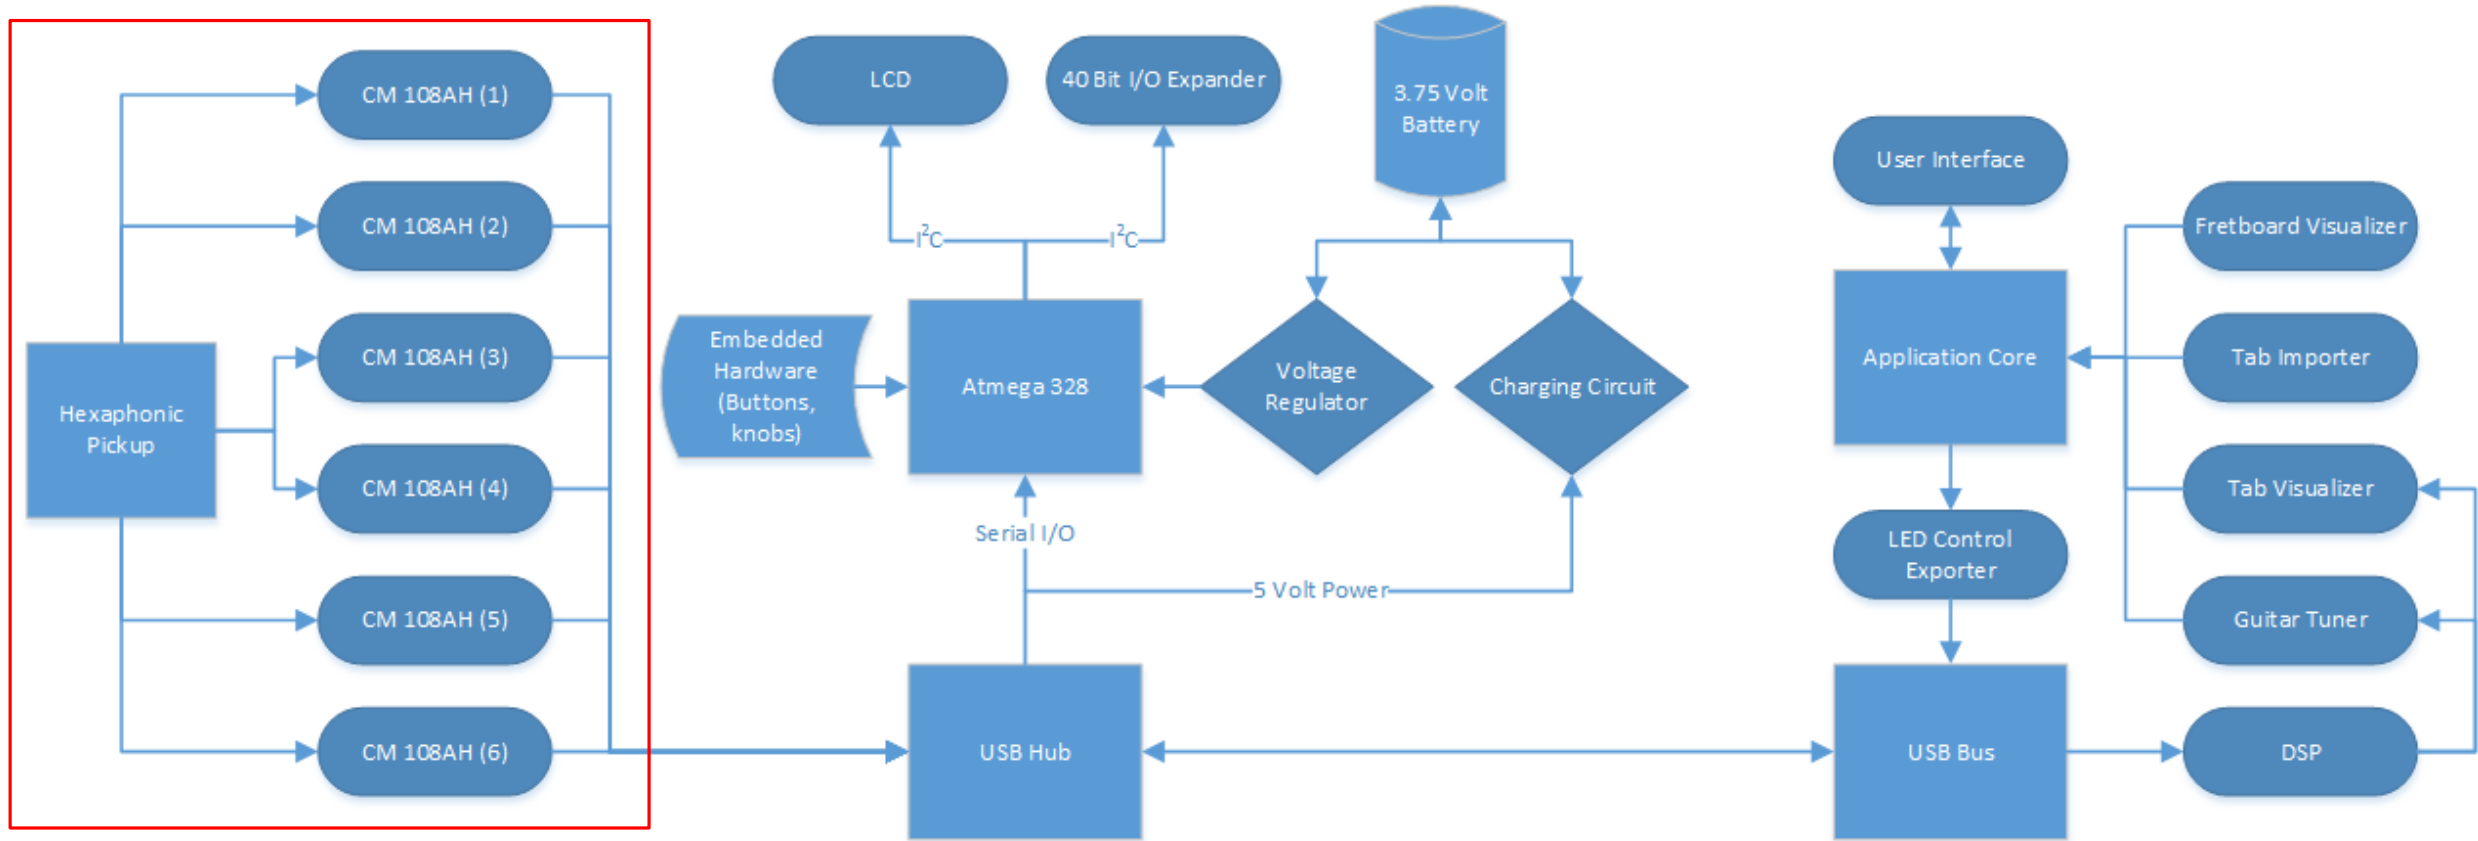

Specifications – DSP

| Component | Parameter | Specification |
|------------|---------------------------|-----------------------------------|
| Processing | Host | Windows PC |
| Processing | Speed | 100ms audio processed in <10ms |
| Notes | Supported frequency range | 50 - 1500 Hz (approx. A1 to E6) |
| Notes | Polyphony | 6 Notes on 6 independent channels |
| Audio | Input Format | 16-bit, 44.1 kHz sampling |
| Audio | Output Format | Midi notes and raw frequency |

PC Software Architecture Overview

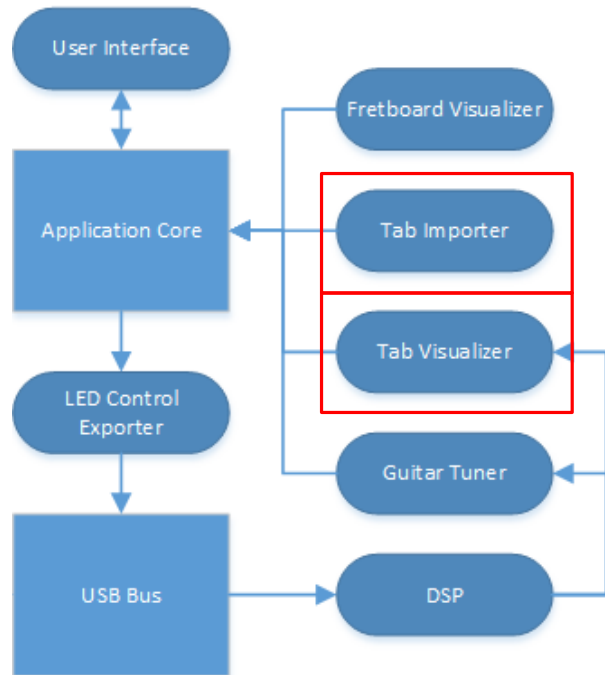

Fretboard Visualizer

- Playback with finger placement
- Fretboard visualizer is the software equivalent of the LED matrix
- Sine wave audio feedback
 - Should be MIDI instead

Tab Visualizer

Selected Fret: none Send Song

Original Tab

```

F: 7 S: 4
```

- Displays original tab
- PowerTab ascii exports are parsed into friendly data seen on right
- Send Song button passes data to software fretboard visualizer

Pitch Detection (DSP)

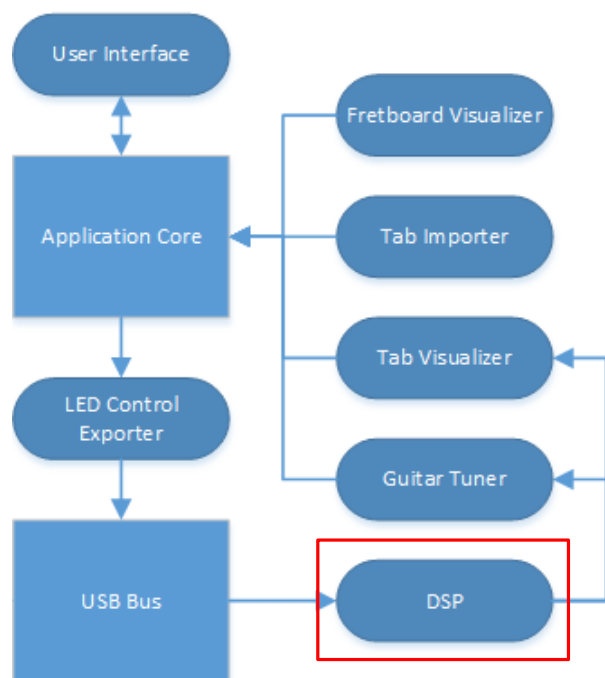

- Utilizes Fast Fourier transforms – Converts time domain signal to frequency domain
- Most prominent frequency is chosen
- Tolerant of noisy signals
- Compared against frequency table to determine MIDI note

Acoustic Guitar D3

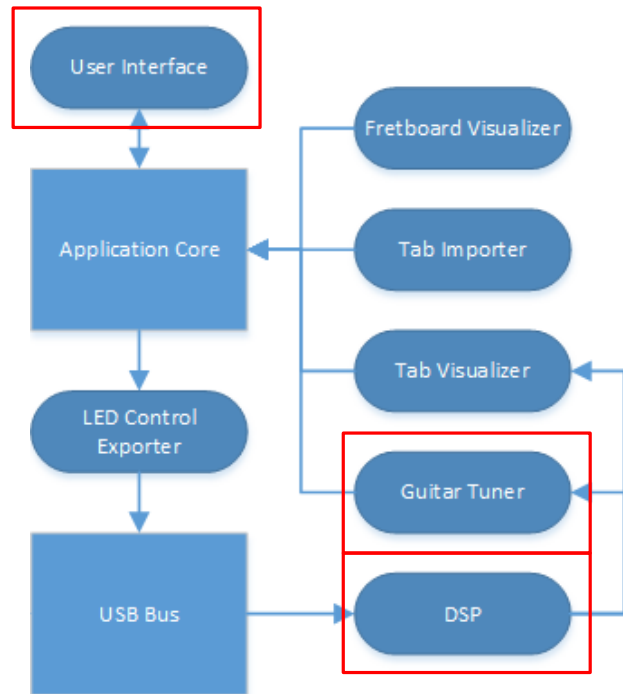

Pitch Detection – Frequency Table

- Correlates frequency to MIDI note

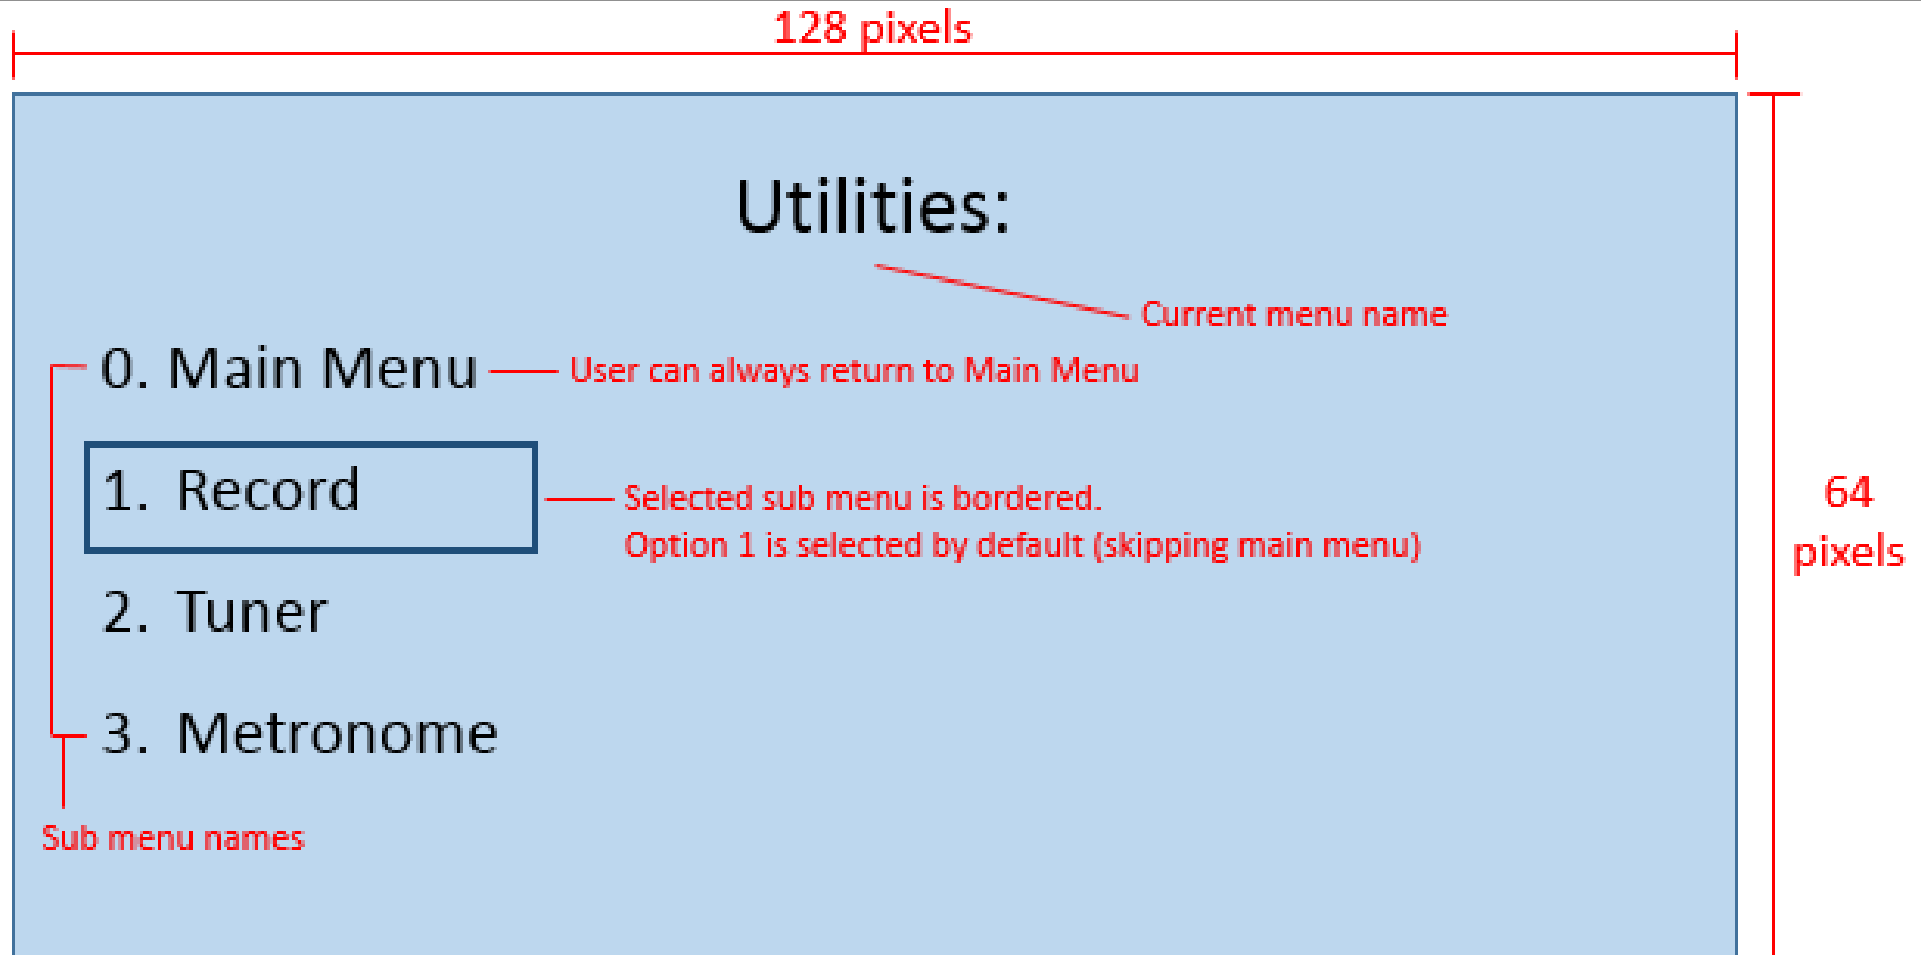

| String (Pitch) | Frequency (Hz) |
|----------------|----------------|
| 1 (E4) | 329.63 |
| 2 (B3) | 246.94 |
| 3 (G3) | 196.00 |
| 4 (D3) | 146.83 |
| 5 (A2) | 110.00 |
| 6 (E2) | 82.41 |

To be completed – Software

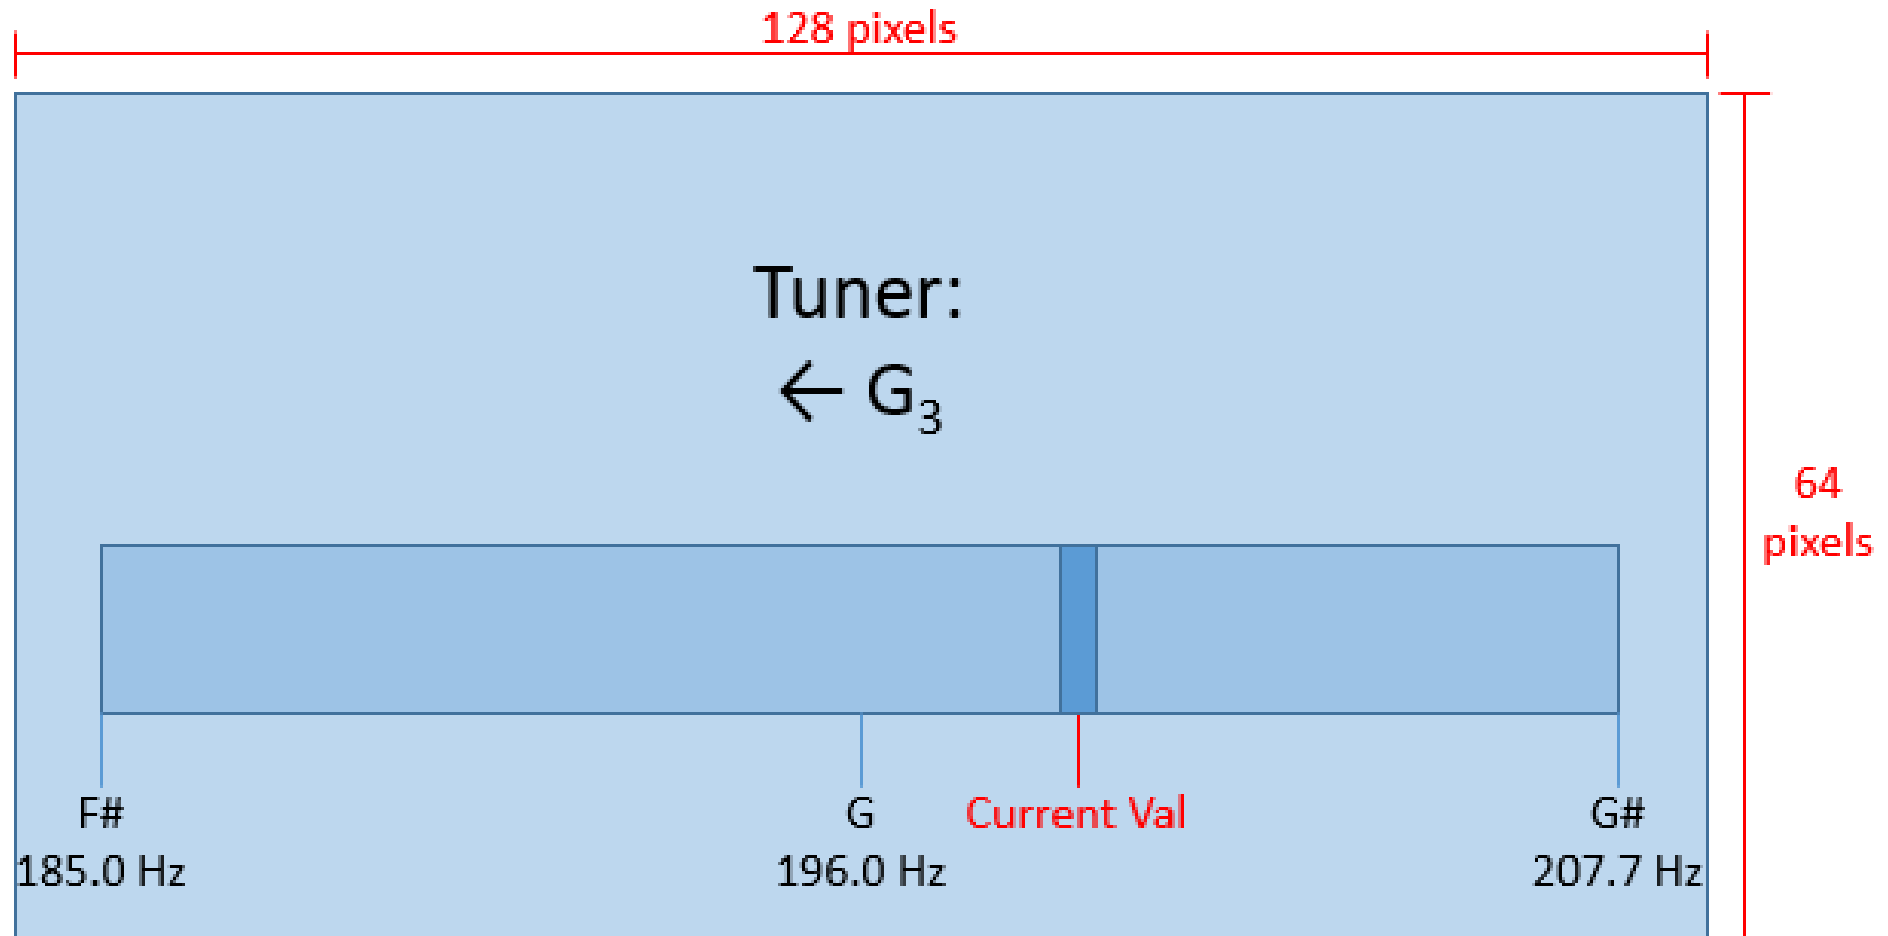

- Embedded User interface mock-ups coming up
- Guitar Tuner (Embedded or PC side?)
- DSP needs to be refined, and perhaps develop into tablature creation

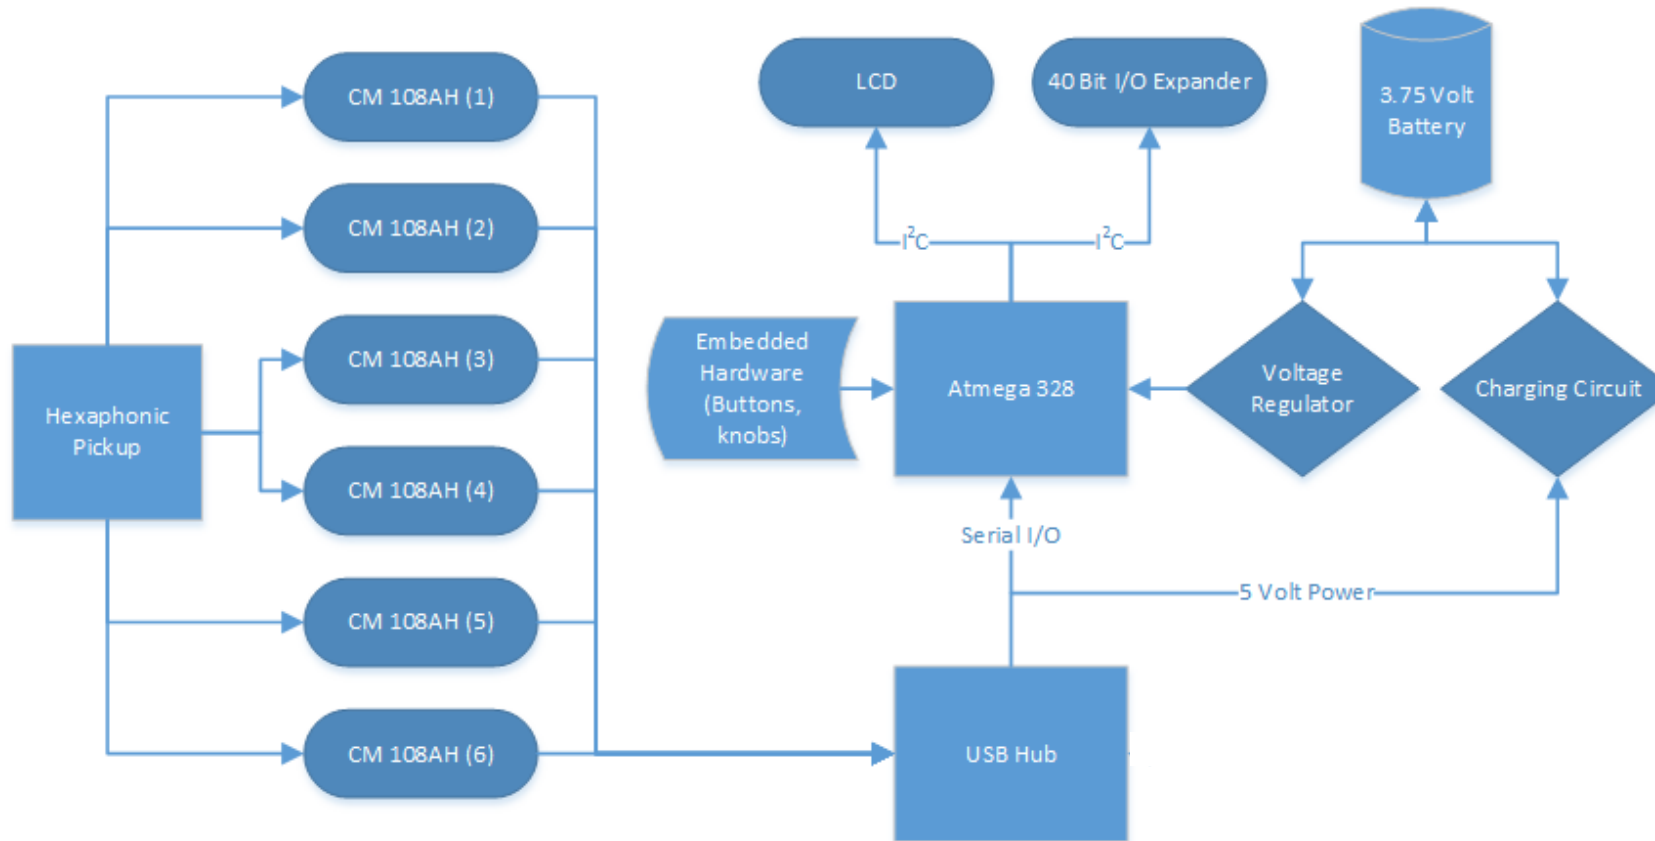

Embedded UI – Menu/File Tree

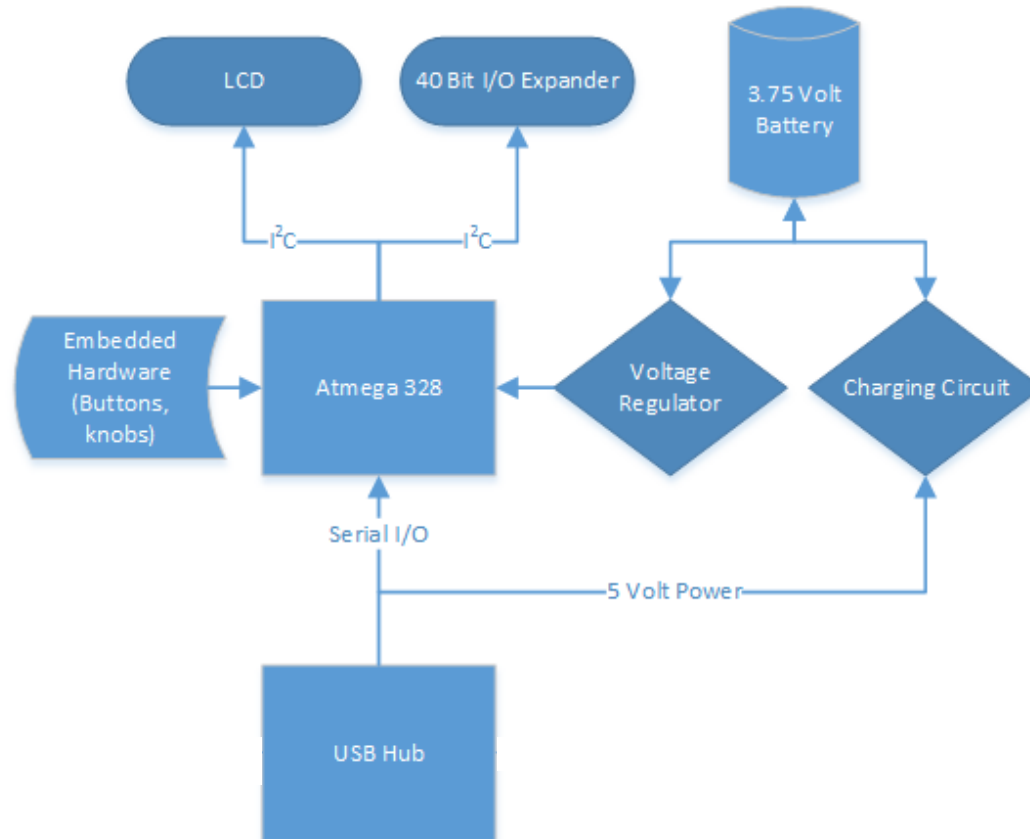

Embedded UI - Tuner

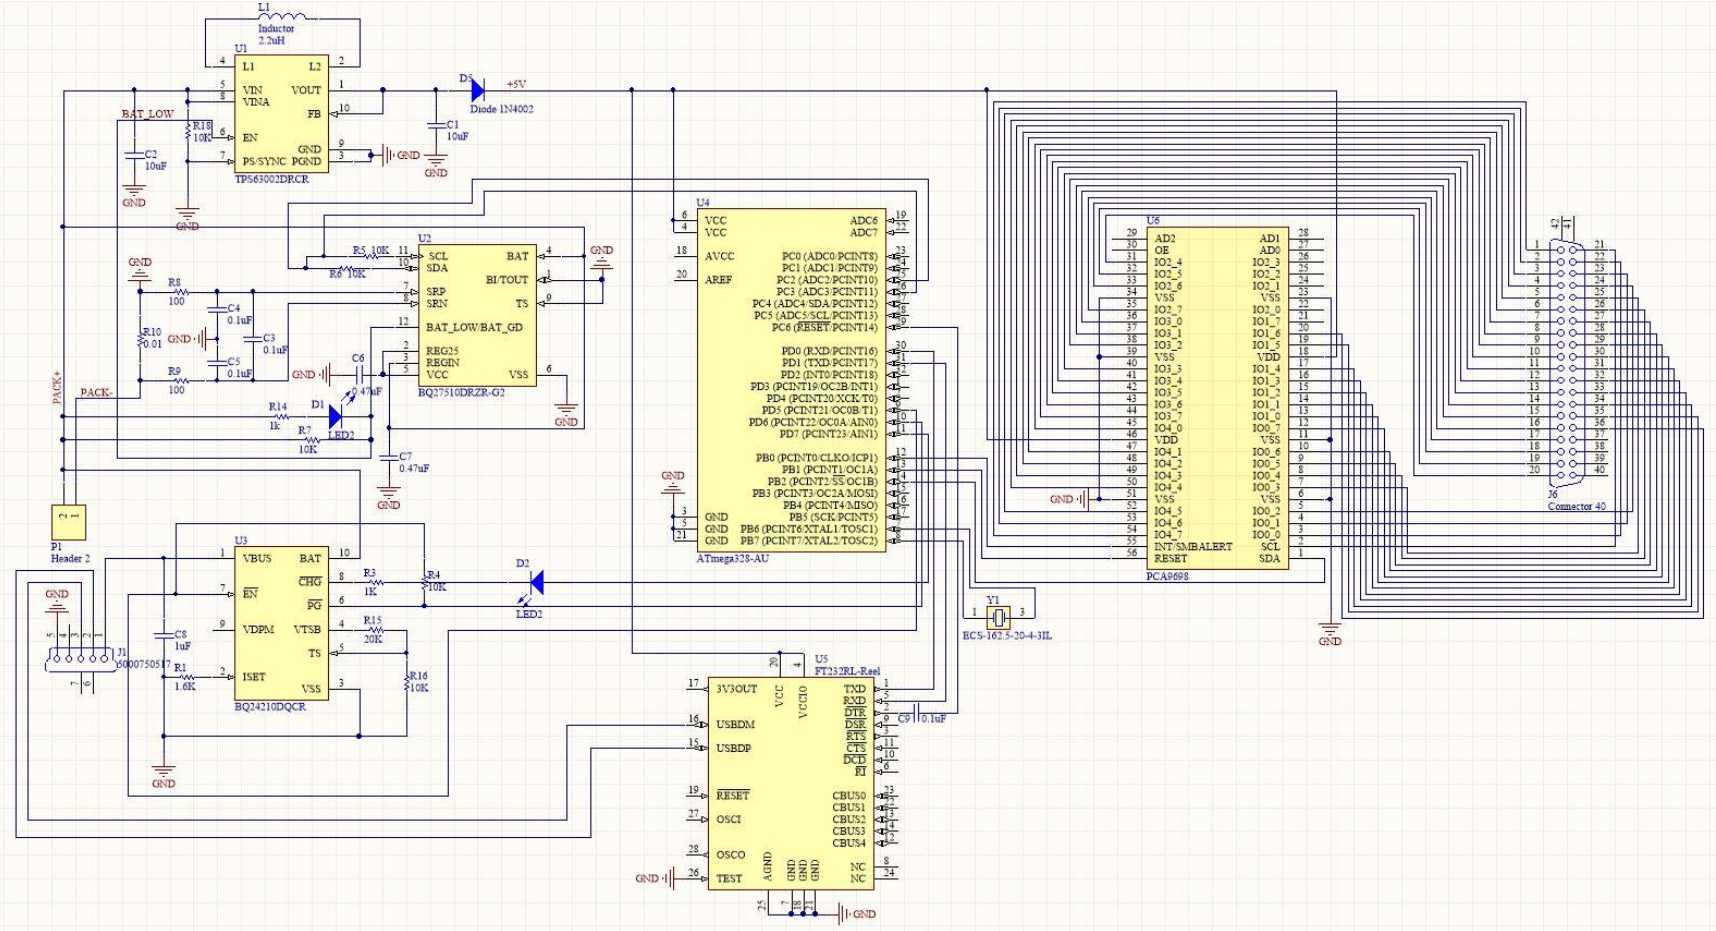

Guitar Hardware Architecture Overview

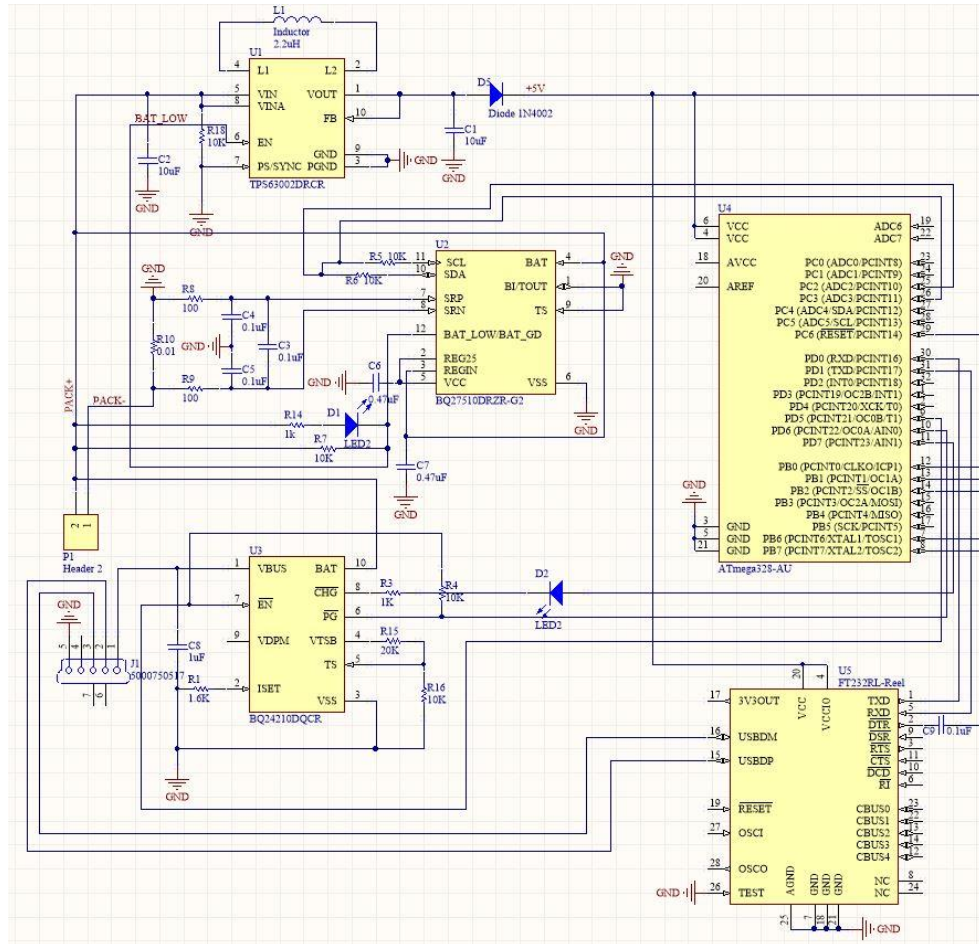

Guitar Hardware – Onboard PCB

Overall Control Board Schematic

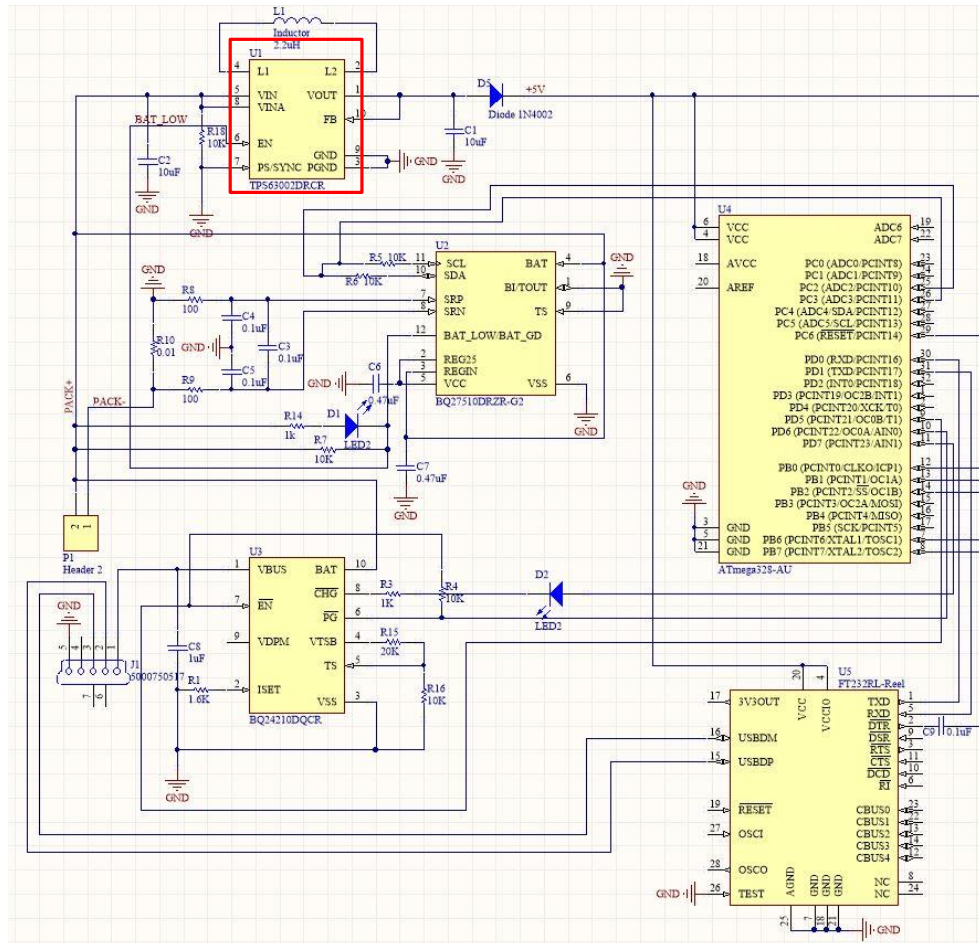

Charging System Schematic

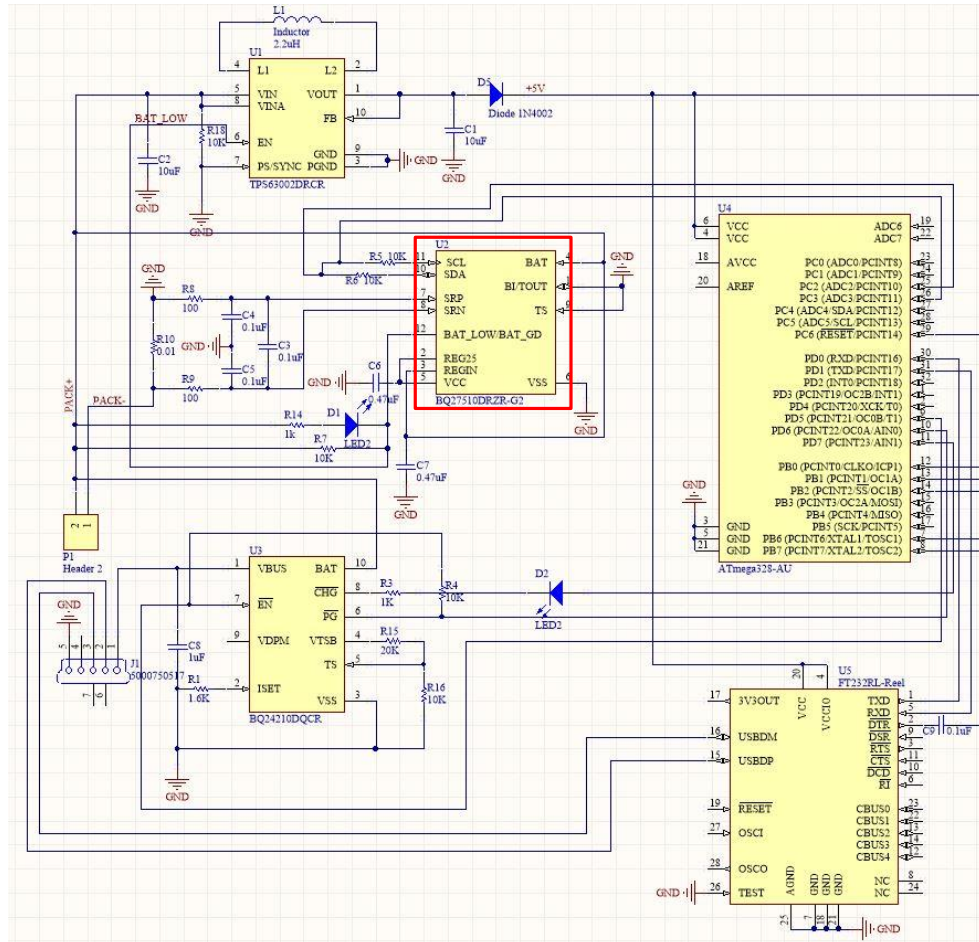

- TPS6300 – Buck/Boost Regulator
- BQ27510 – Fuel Gauge Detector
- BQ24210 – Battery Charger

TPS6300 – Buck/Boost Regulator

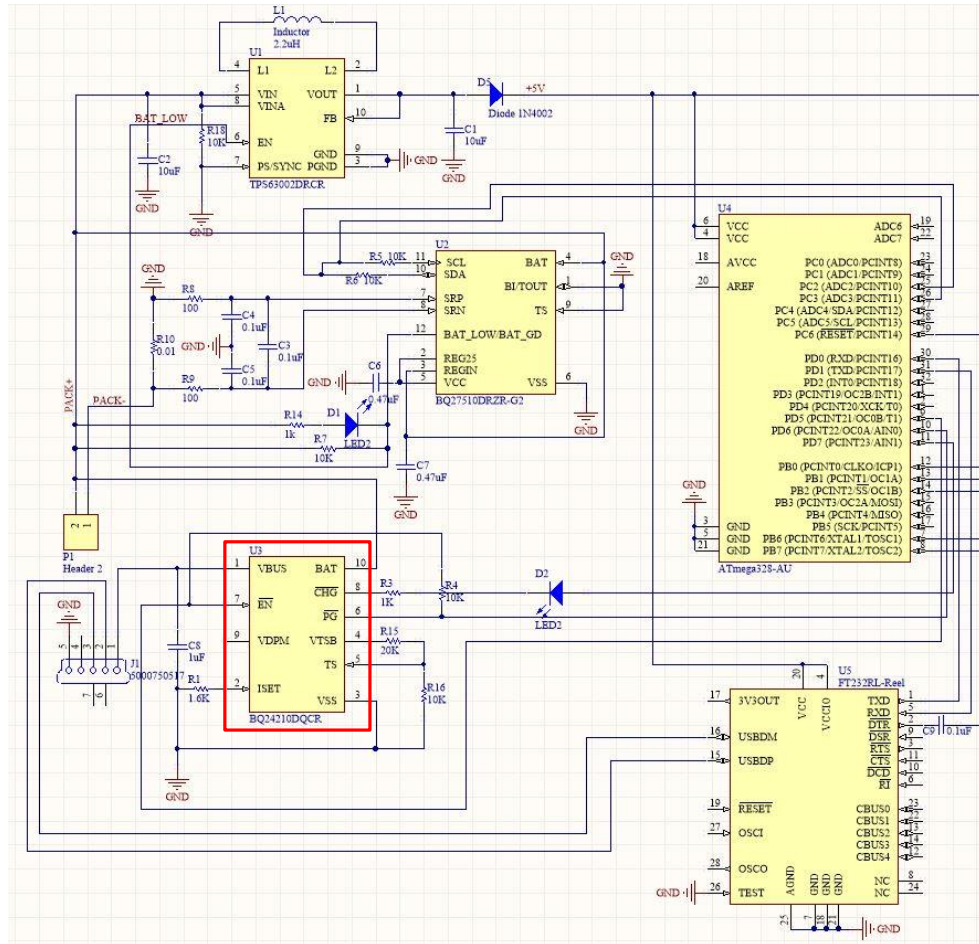

- Acts similar to a voltage regulator
- Has the ability to increase or decrease the input voltage
- Outputs 5V
- EN line is the enable input
 - 1 for enable, 0 for disabled
 - Gets signal from BAT_LOW line from Fuel Gauge Detector

BQ27510 – Fuel Gauge Detector

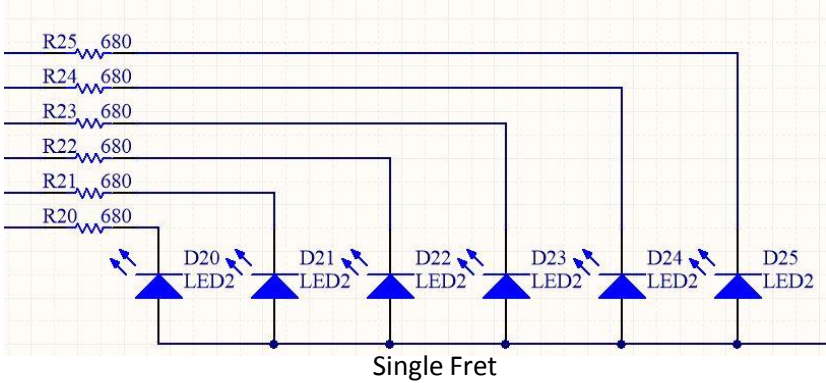

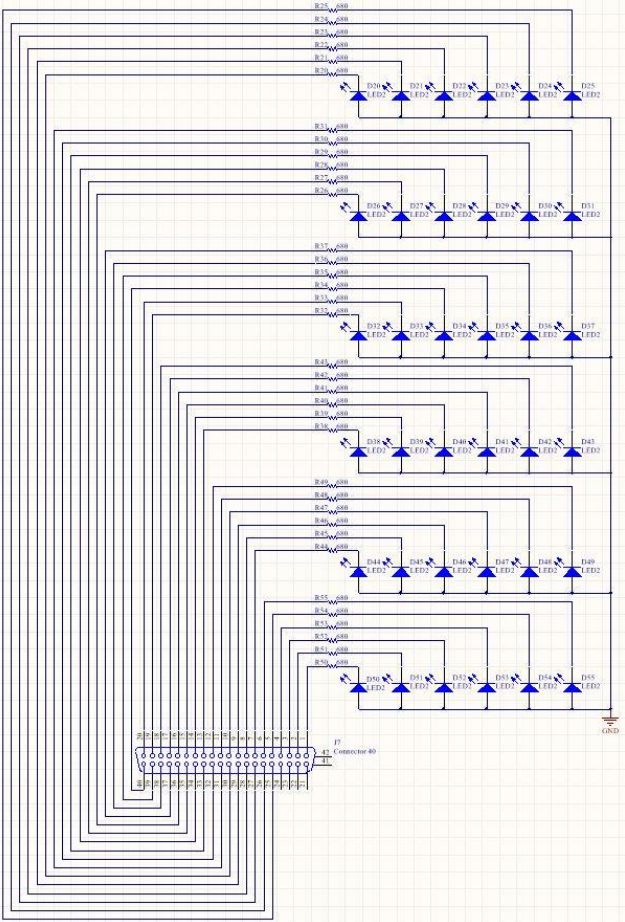

- The fuel gauge measures the cell voltage, temperature, and current
- When battery is low, an LED indicator is lit
- Also monitors charge and discharge activity by sensing the voltage across a resistor (R10)

BQ24210 – Battery Charger

- Charges Lithium Ion battery from USB power cable
- The battery is charged in three phases:
 - Conditioning – Readies discharged battery
 - Package constant current – Fast charges
 - Constant voltage – Safely reaches max charge
- Internal control loop monitors the IC junction temperature and reduces the charge current if an internal temperature threshold is exceeded

Fretboard LED Schematic

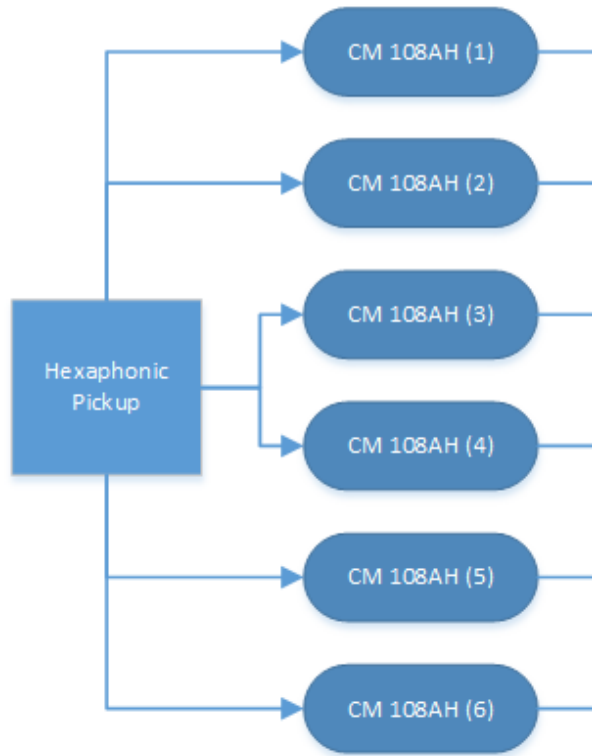

PCB Design (In Progress)

PCB Design – 3D Model (In Progress)

Pitch Detection Hardware

- 6 independent channel (hexaphonic) output
- To be placed in the sound hole of an acoustic guitar for prototyping
- Using the CM108AH chip (on right), we feed each line into the Windows PC

Hexaphonic Pickup

USB Sound Card (CM108AH)

Embedded Hardware Mockup

Embedded Hardware Mockup

Prototyping

- Elegant* first electric prototype shown on right
- Polyphonic pitch detection.
- Drop C tuning pictured in console output below
 - Out of order because windows arbitrarily orders audio devices

```

Prototyping (cont'd)

- First acoustic prototype shown on right
- Custom 3D-printed clamping mechanism shown below

Project Roadblocks

- Latency issues with audio pass-through
- Form factor / hardware minimization
 - Placing hexaphonic pickup under guitar strings and independent right/left height adjustment
 - Fitting fretboard LEDs under strings
 - 1 USB sound card per channel, can't find cheap ones with input only
- Advanced tablature feature parsing
 - Attempting to parse PowerTab ASCII exports makes some assumptions and is thus not 100% accurate
- Embedded pitch detection
 - Issues working with TI ezDSP boards, lots of time wasted.
 - Embedded solutions are expensive and underpowered
- Primary embedded Microprocessor
 - Usability and program memory size issues with TI MSP430

Project Successes

- Software-only subsystems have been successful and reliable
- Basic polyphonic pitch detection. Only needs minor improvements.
 - Initial DSP prototyping has shown feasibility
- Time management:
 - Staying ahead of things
 - Overall progress
- Morale is high and Hilton reservations have not been made

Expenses to date

| Item | Quantity | Cost per Unit | Total Cost |
|-----------------------------------|----------|---------------|-----------------|
| TMDX5535EZDSP (TI ezDSP chip) | 1 | \$115.53 | \$115.53 |
| TSSOP-56 to DIP Adapter | 2 | 14.99 | \$29.98 |
| TSSOP-20 Breakout / Male headers | 1 | \$28.58 | \$28.58 |
| I/O Expander / MSP430G2553 / LEDs | 1 | \$48.00 | \$48.00 |
| Radxa Rock Light | 1 | \$69.99 | \$69.99 |
| USB sound card | 8 | \$8.26 | \$66.10 |
| 568-1455-5-ND Analog Mux | 3 | \$2.18 | \$6.53 |
| USB 2.0 slim hub | 2 | \$5.99 | \$11.98 |
| Edimax EW-7811Un | 1 | \$8.99 | \$8.99 |
| 5V 2A micro USB wall charger | 1 | \$7.99 | \$7.99 |
| 8GB micro SDHC card Class 10 | 2 | \$6.99 | \$13.98 |
| ODROID-C1 | 1 | \$36.95 | \$36.95 |
| | | Total: | \$444.60 |

Budget – Current Iteration Build Materials

| Item | Quantity | Cost per Unit | Total Cost |
|-----------------------------------|----------|--------------------|-----------------|
| Hex Pickup | 1 | \$60.00 (Salvaged) | \$60.00 |
| Charging Circuit ICs | 3 | \$4.00 | \$12.00 |
| I/O Expander / MSP430G2553 / LEDs | 1 | \$48.00 | \$48.00 |
| USB sound card | 6 | \$8.26 | \$49.58 |
| USB 2.0 slim hub | 2 | \$5.99 | \$11.98 |
| Printed Circuit Board | 1 | \$100.00 | \$100.00 |
| Ribbon Cabling | 1 | \$45.00 | \$45.00 |
| Lithium Ion Battery | 1 | \$4.95 | \$4.95 |
| Surface Mount LEDs | 36 | \$0.56 | \$20.16 |
| | | Total: | \$351.67 |

Progress

Completion

Going Forward

- Untethered Mode
 - SD Card support on PCB
 - Battery/charging prototyping
- Software Improvements
 - Tab complexity support
 - DSP cleanup -- noise reduction and signal isolation
 - Usability and interface tweaks
- PCB Development
 - Get initial Altium designs printed and tested
 - Iterate as necessary
