MOTIVATION

An integrated solution that could save lives

FIRE FIGHTER DEATHS BY TYPE OF DUTY FOR 2017 PUBLISHED IN 2018 BY THE NFPA

*Not endorsed by any organization.

GOALS AND OBJECTIVES

- Establish a localized location using GPS
- Send localized location to helmet user's screen and communication module
- Transmit and receive voice using Communications module
- Navigate in the dark and display high near infrared (NIR) sources
- Run all operations with as little power as possible

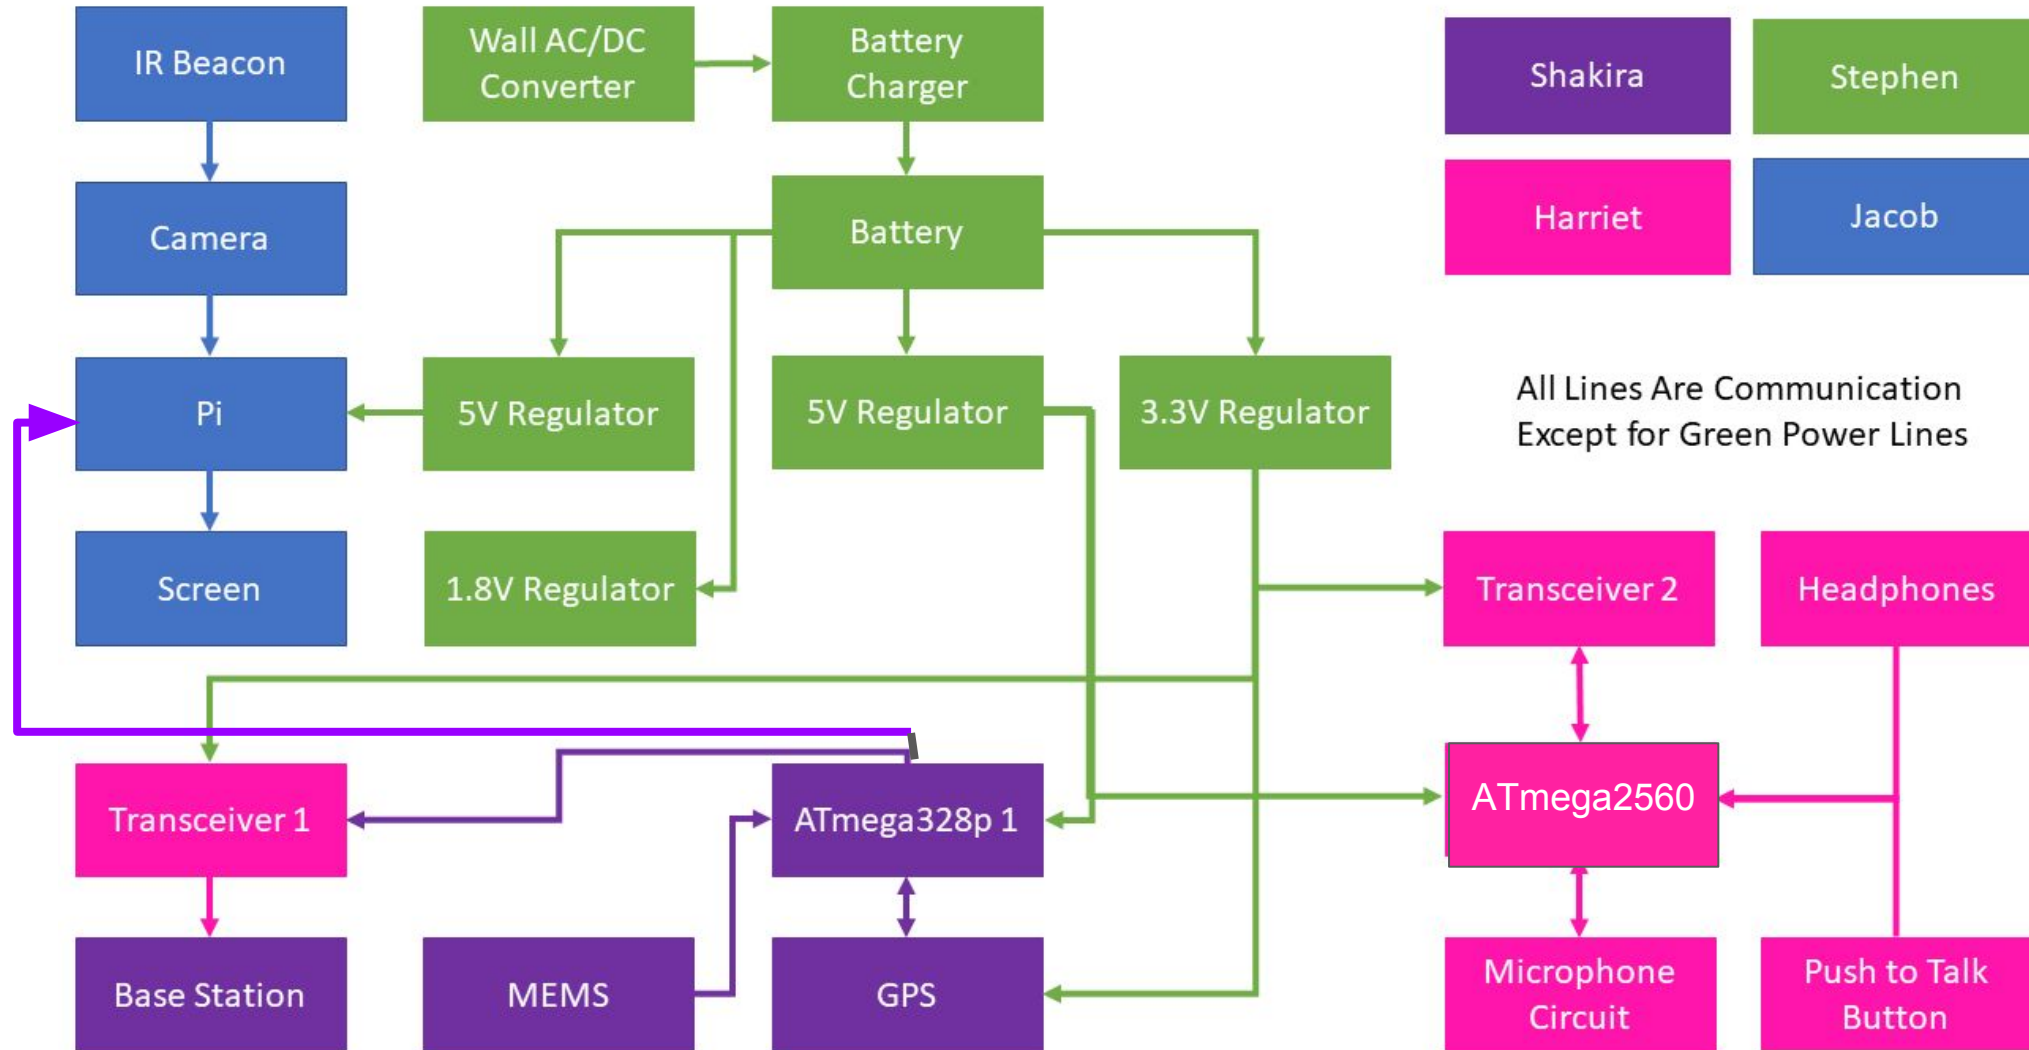

SPECIFICATIONS

| Component | Parameters | Design Specification | Units |
|------------------------|--------------------------|----------------------|--------|
| GPS | Accurate within | 3 | meters |
| Transceiver, RFM69HCW | Minimum Range | 3 | meters |
| Transceiver, nRF24L01+ | Minimum Range | 2 | meters |
| NIR Camera | Minimum Range (NIR band) | 5 | meters |
| NIR Beacon detection | Minimum Range | 10 | meters |
| Batteries | Charge Time | 4 | hours |
| Batteries | Run Time | 3.85 | hours |

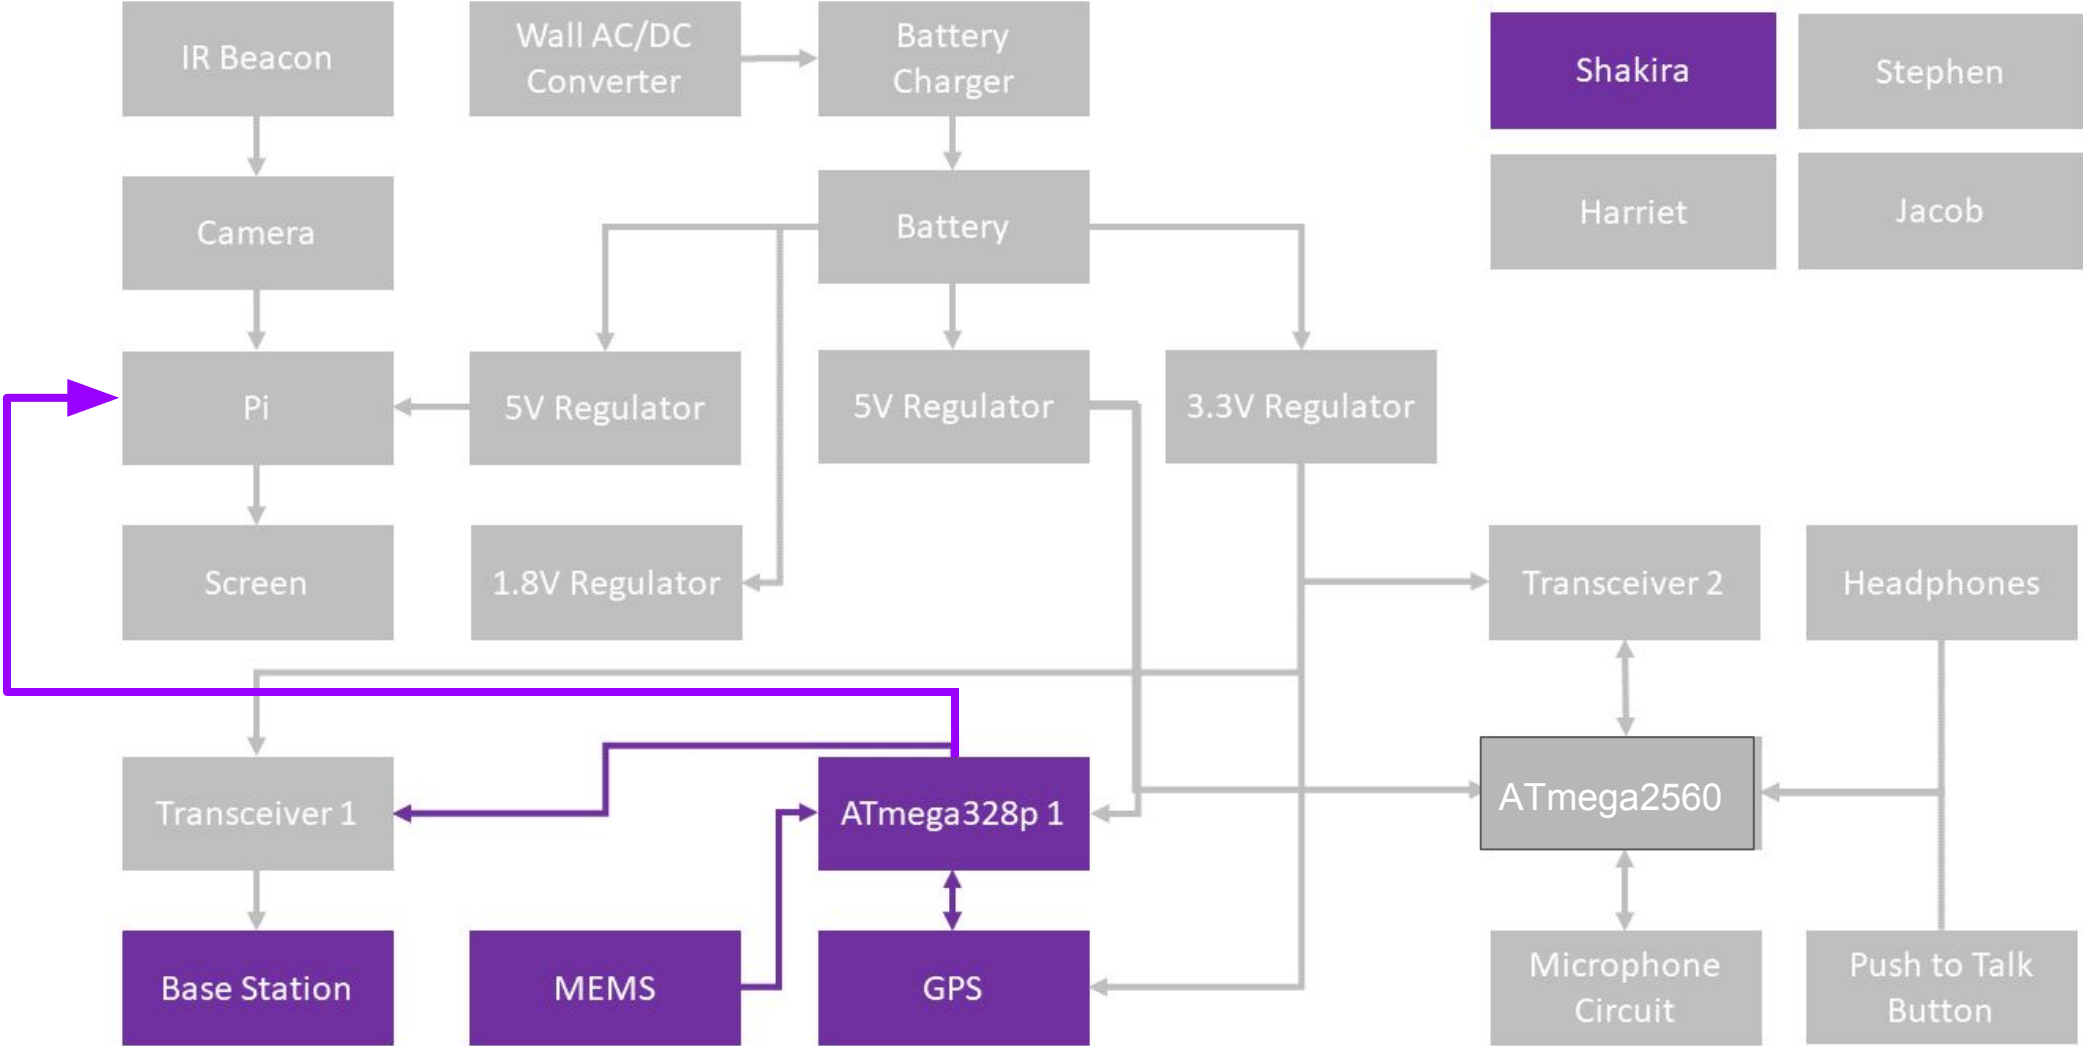

REALISTIC DESIGN CONSTRAINTS

- GPS needs time to warm up
- Signal attenuation caused by noise, environmental settings, and distance
- Operation of device between 32 to 113 °F
- Radio waves can interfere with RF circuit
- NIR can be reflected on many surfaces

OVERALL BLOCK DIAGRAM

LOCATION MODULE

Purpose: to track the helmet user using the Global Positioning System (GPS).

DIMENSIONS:
25 x 25 mm

PACKAGE:
surface mount device (SMD)

<https://www.u-blox.com/en/product/neo-6-series>

DIMENSIONS:
4.57 x 34.8 mm

PACKAGE:
Throw hole

<https://www.quora.com/What-is-the-pin-names-mapping-from-Arduino-to-the-actual-AVR-pin-mapping-I-need-to-use-the-board-for-pure-AVR-programming-The-Arduino-board-uses-an-ATmega328P-PU-chip>

LOCATION

LOCATION TECHNOLOGIES

| Technology | What it does | Range | Pros | Cons |
|------------|--|-----------|--|--|
| GPS | Calculates position by finding distance from 30 satellites orbiting earth using trilateration. | unlimited | not expensive. Accessible. Unlimited range. Used in many applications: tracking cars, tracking sports players. low powered. | operates on large scale, which is better use for micro-level tracking. Need a good view of the sky. |
| BEACON | Short-range wireless technology. Transmitters that send out unique identifiers. | 1m-100m | reduced power consumption. Good data speeds. Used in retail, bus stop information, smart houses | effective range can be compromised by physical objects and reflections blocking signal. Too many beacons = signal noise and reduced accuracy. |

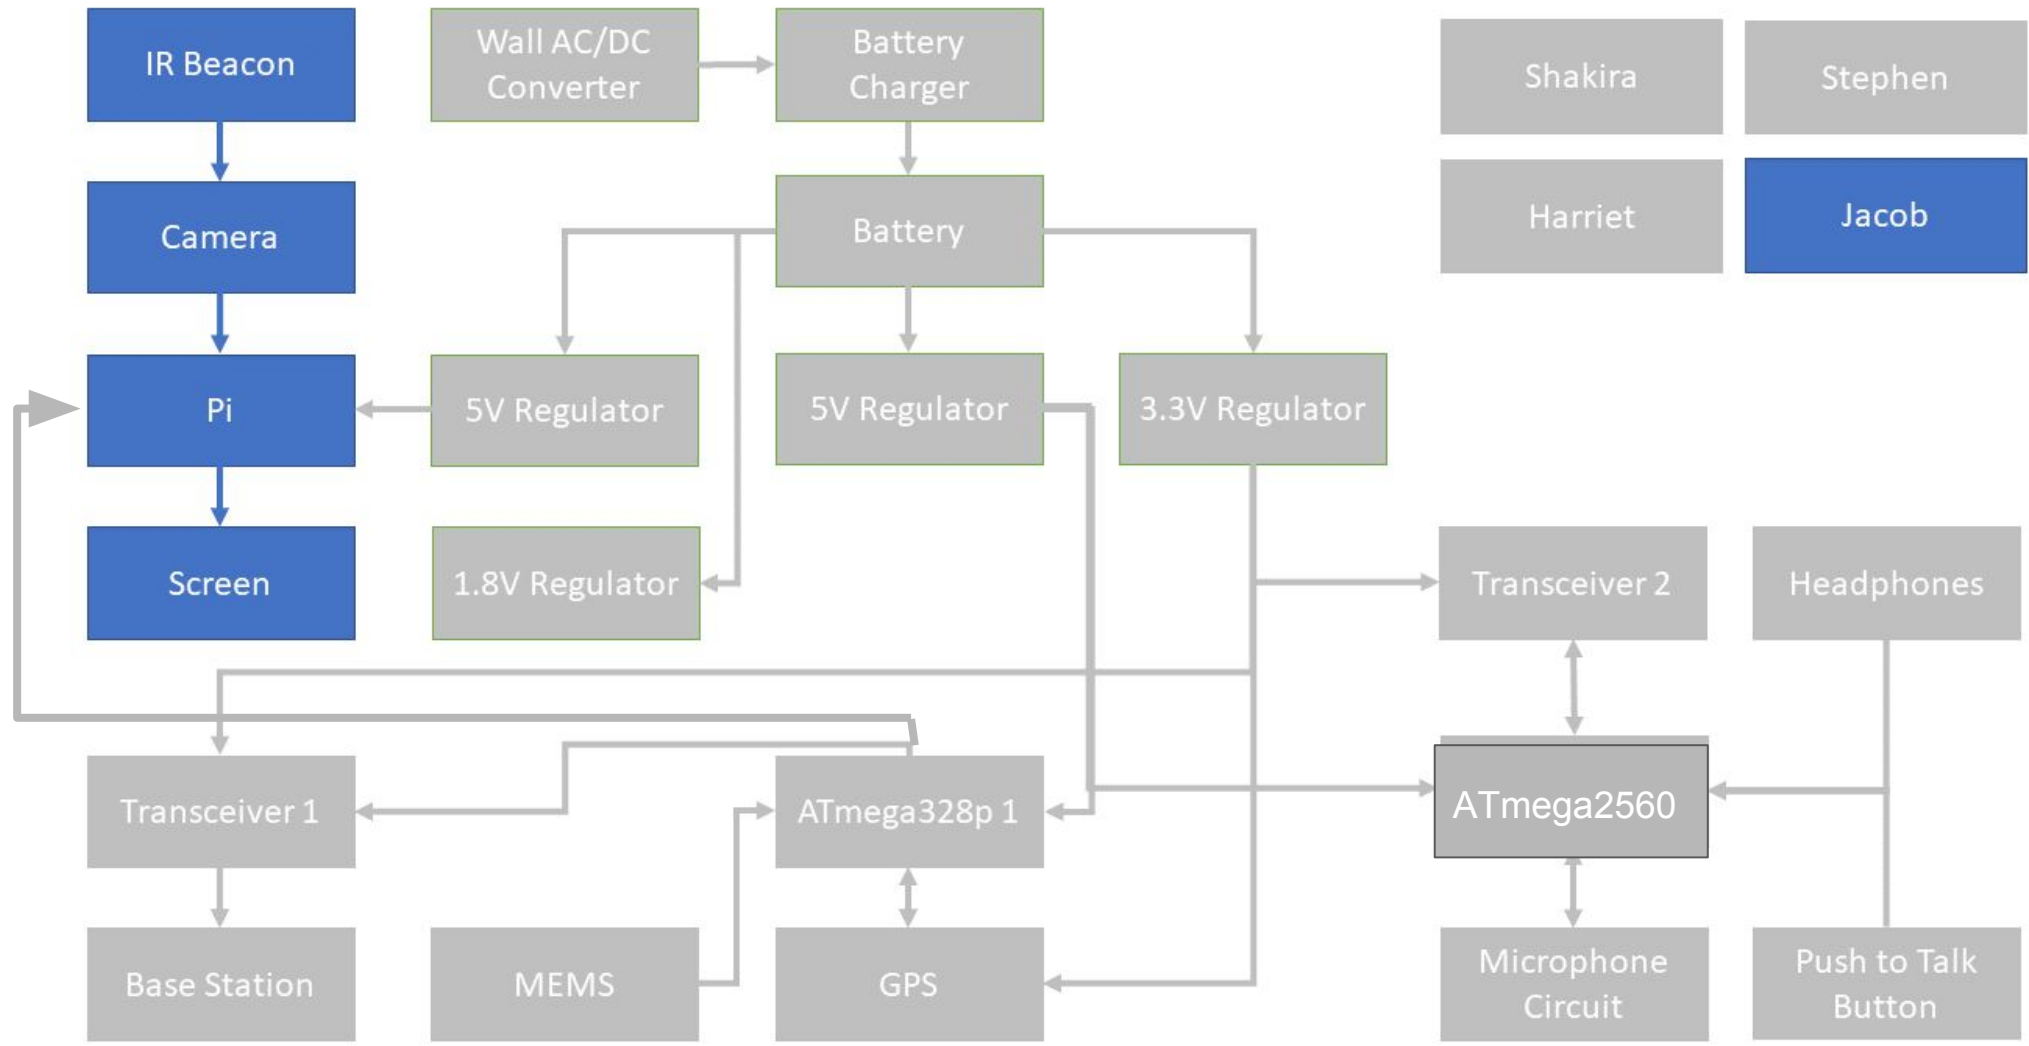

LOCATION TECHNOLOGIES

| Technology | What it does | Range | Pros | Cons |
|------------|--|--------------|--|---|
| RFID | Radio-frequency identifiers send out a signal that can be transmitted or read. | 1cm-100m | Passive RFID good for inventory management, contactless payments, access control | Expensive, because of readers, not useful for hands-off operations for responders. |
| Wi-Fi | location-based tracking. Makes use of radio waves to transmit information across a network. Wireless adaptors create hotspots for access | 20m-100m | to deliver personalized content to customers | Not secure. Not as accurate as RFID and beacons. Need to be in a remote location to access hotspot. |
| NFC | Near Field Communication. Close proximity communications chip technology. Tagging, key cards | 10cm or less | Not very expensive. Secure. accurate, low powered | near range only for accuracy. Need distance for location module. |

GPS

| Properties | EM-506 | GPS Module-Neo-6M | LS20031 5HZ |
|-------------------------|-------------------------|-------------------|--|
| dimensions | 30x30x10.7mm | 25x25x4mm | N/A |
| cost | \$39.95 | \$49.00 | \$69.95 |
| hot start | 1s | 1s | less than 1s |
| cold start | 35s with CGEE | 27s | 32 w/out AGPS less than 15 w/ AGPS |
| max amps consumption | 44-55mA at 4.5V-6.5V | 39mA at 3.0V | 41mA at 3.1V |
| Tracking sensitivity | -163dbM | -161dbM | not on datasheet |

VISION MODULE

Purpose: to show the location of the user, to show a video feed in NIR instead of regular visible light.

VISION

CAMERA TECHNOLOGIES

| Technology | How it works | Pros | Cons |
|---------------------------------------|--|---|---|
| Low Light | Amplifies incoming visible light | Works very well outside | Dependent on external lighting, often needs extended exposure |
| Near IR cameras often called Infrared | Detects infrared waves, just outside visible light | Cheaper than Thermal cameras and is not ITAR controlled | Often has to self illuminate with a Near IR light |
| Thermal also often called Infrared | Detects thermal radiation | Does not use any illumination | ITAR controlled and very expensive with limited resolution |

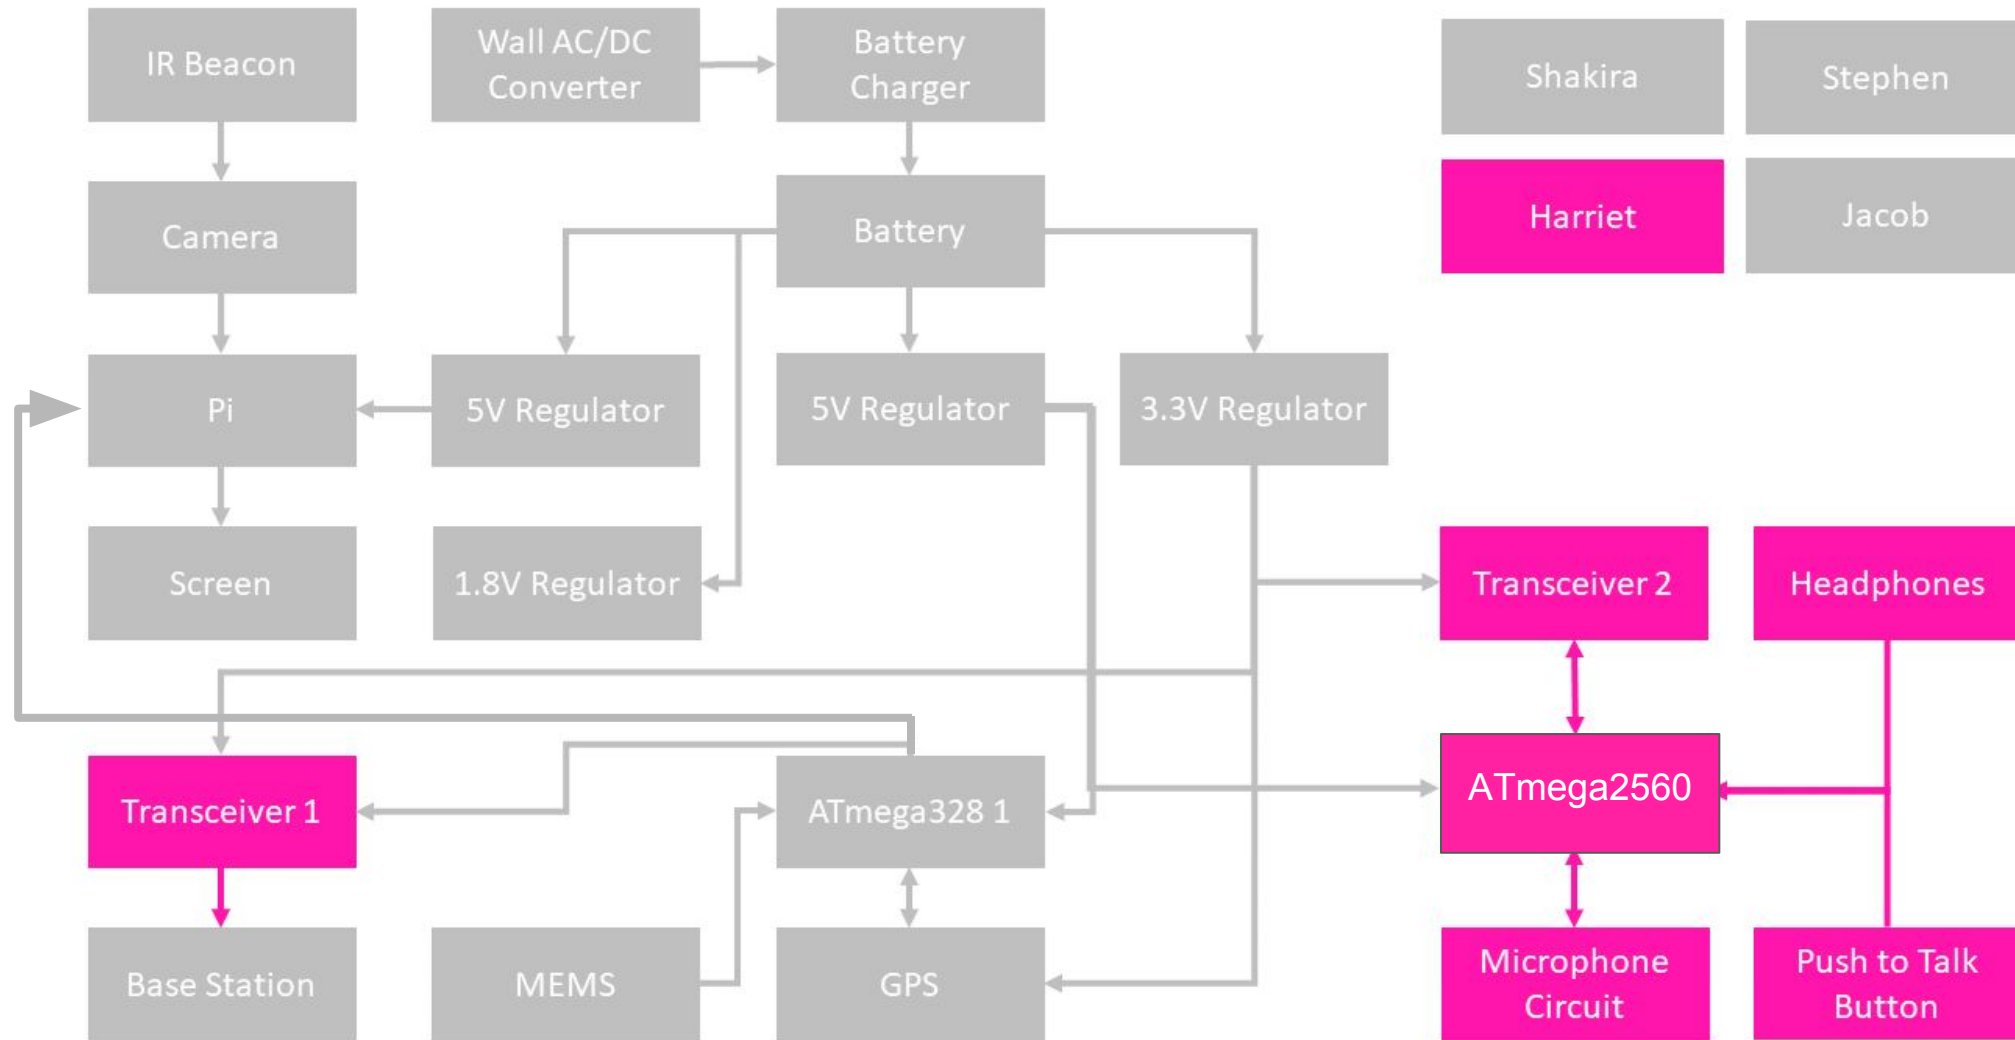

CAMERA

| Camera | Company | Technology | Frame Rate | Resolution | Cost |
|---------------|---------|------------|------------|--------------------|--------|
| Boson | FLIR | Thermal | 30 or 60 | 640x512 or 320x256 | \$1800 |
| Lepton | FLIR | Thermal | 8.7 | 160x120 | \$200 |
| USB IR Camera | ELP | NIR | 10-30 | 160x120 - 1280x720 | \$40 |

PROCESSOR

| PROCESSOR | PACKAGE | COST |
|--------------|----------------|---------------|
| STMf469 | LQFP / BGA | \$12.64-17.21 |
| PIC32MZ | BGA | \$11.48-21.15 |
| TI Davinci | NFBGA | \$54.08 |
| Raspberry Pi | Complete Board | \$35 |

COMMUNICATIONS MODULE

Purpose: provide clear, reliable voice and GPS data communications between users.

WALKIE-TALKIE WITH LOCATION CAPABILITIES

3 Types of Channels for Voice Transmission

a Simplex system

b Half-duplex system

c Full-duplex system

COMMUNICATIONS

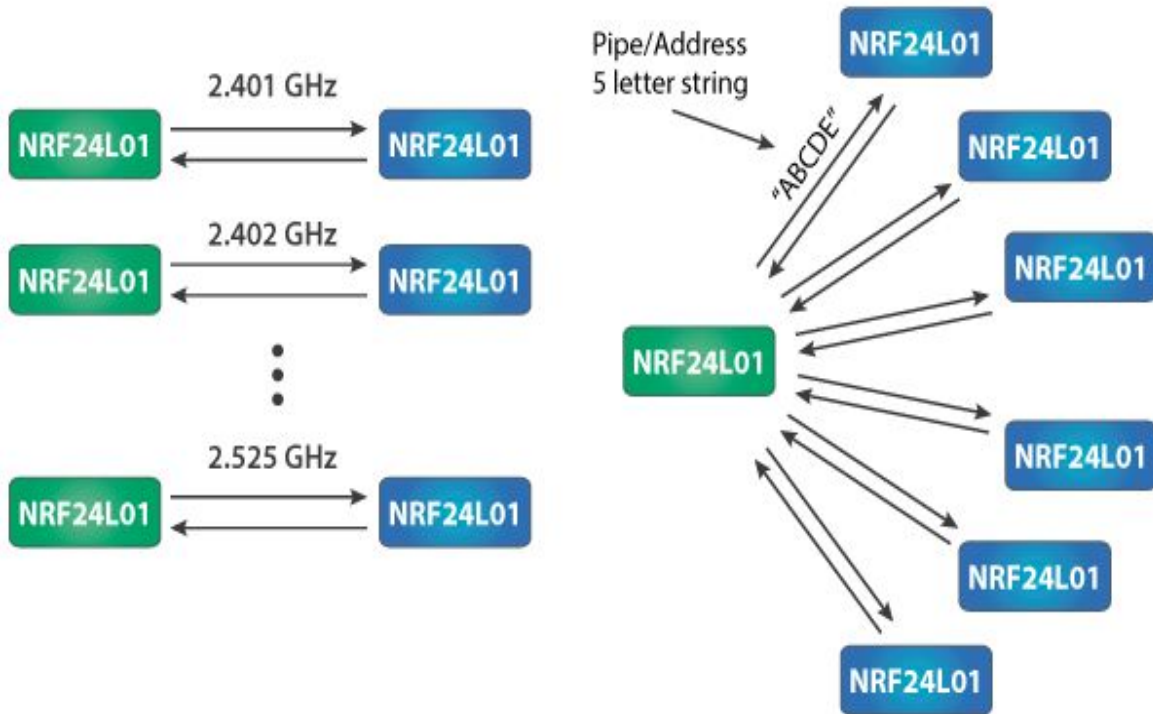

TRANSCEIVERS

| PART NAME | OPERATING FREQUENCY | OPERATING VOLTAGE | MAX OUTPUT POWER | POWER CONSUMPTION | RECEIVER SENSITIVITY | DATA RATE |
|-----------|---------------------|-------------------|--|---|----------------------|--------------------|
| CC1352P | sub-1 GHz, 2.4 GHz | 1.8V-3.8V | +20 dBm for 863-930 MHz, +5 dBm for 2.4GHz | sub-1 Rx - 5.8mA sub-1 Tx - 14.3mA 2.4 Tx - 8.2mA | -122 dBm | 4Mbps |
| nRF24L01 | 2.4 GHz | 1.9V-3.6V | +4 dBm | Rx- 12.3mA Tx-11.3mA | -85 dBm | 250 kbps- 2Mbps |
| RFM69HCW | sub-1 GHz | 1.8V-3.6V | +20 dBm | Rx- 16mA Tx- 20mA | -120 dBm | 300 kbps |

Why Two Transceivers?

- FCC REGULATION: 2.4 GHz available for short range voice communications
- FCC REGULATION: Sub-1 GHz good for passive data transmission
- MISSION CRITICAL SYSTEM: dedicated channels to prevent system crippling and signal mixing

Purpose: transmit and receive voice at 2.4 GHz

DIMENSIONS:
4 x 4mm

- Price - \$3.50 each
- 16 channel, 10-bit ADC
- Low power consumption
- Gaussian Frequency Shift Key modulation

nRF24L01+

Purpose: transmit and receive data at sub-1 GHz (915 MHz)

- Price - \$5.95 each
- Excellent receiver sensitivity
- Low power consumption
- Frequency Shift Key modulation

DIMENSIONS:
16 x 16 mm

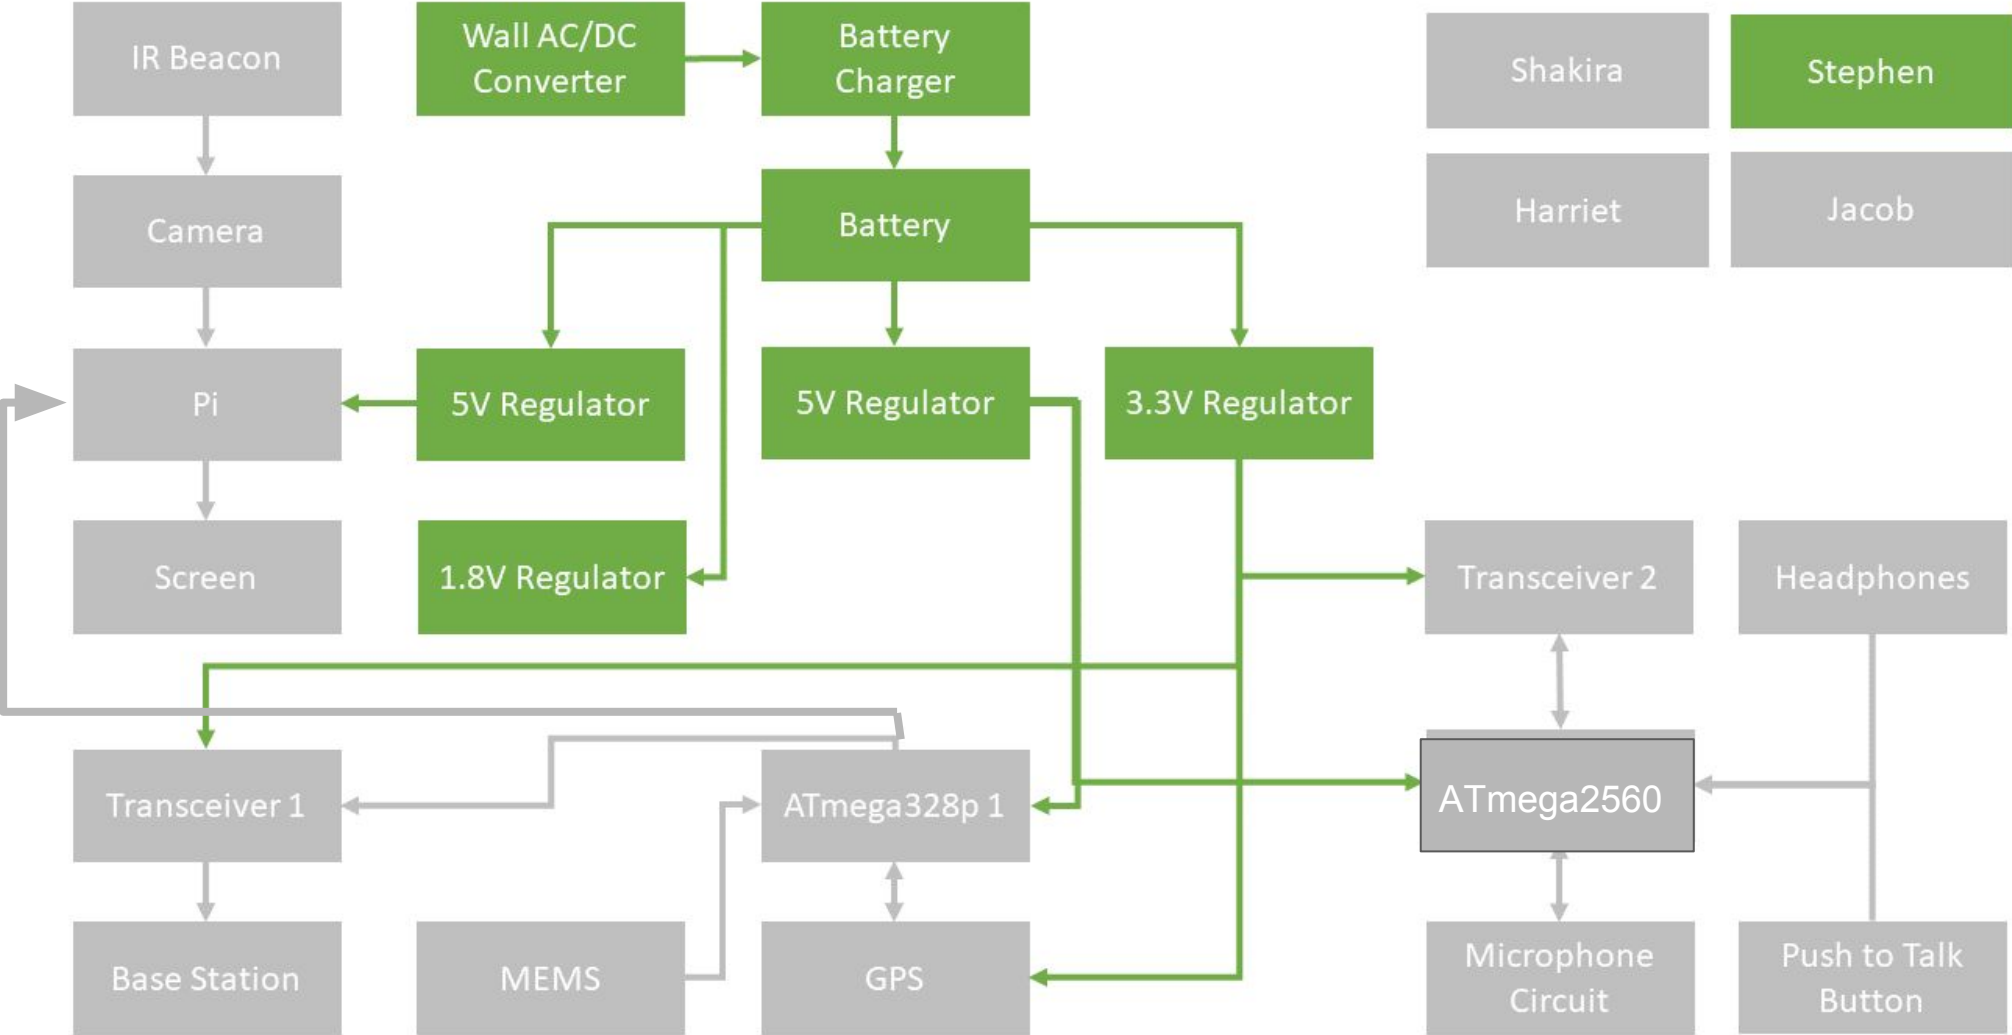

PACKAGE: surface mount device (SMD)

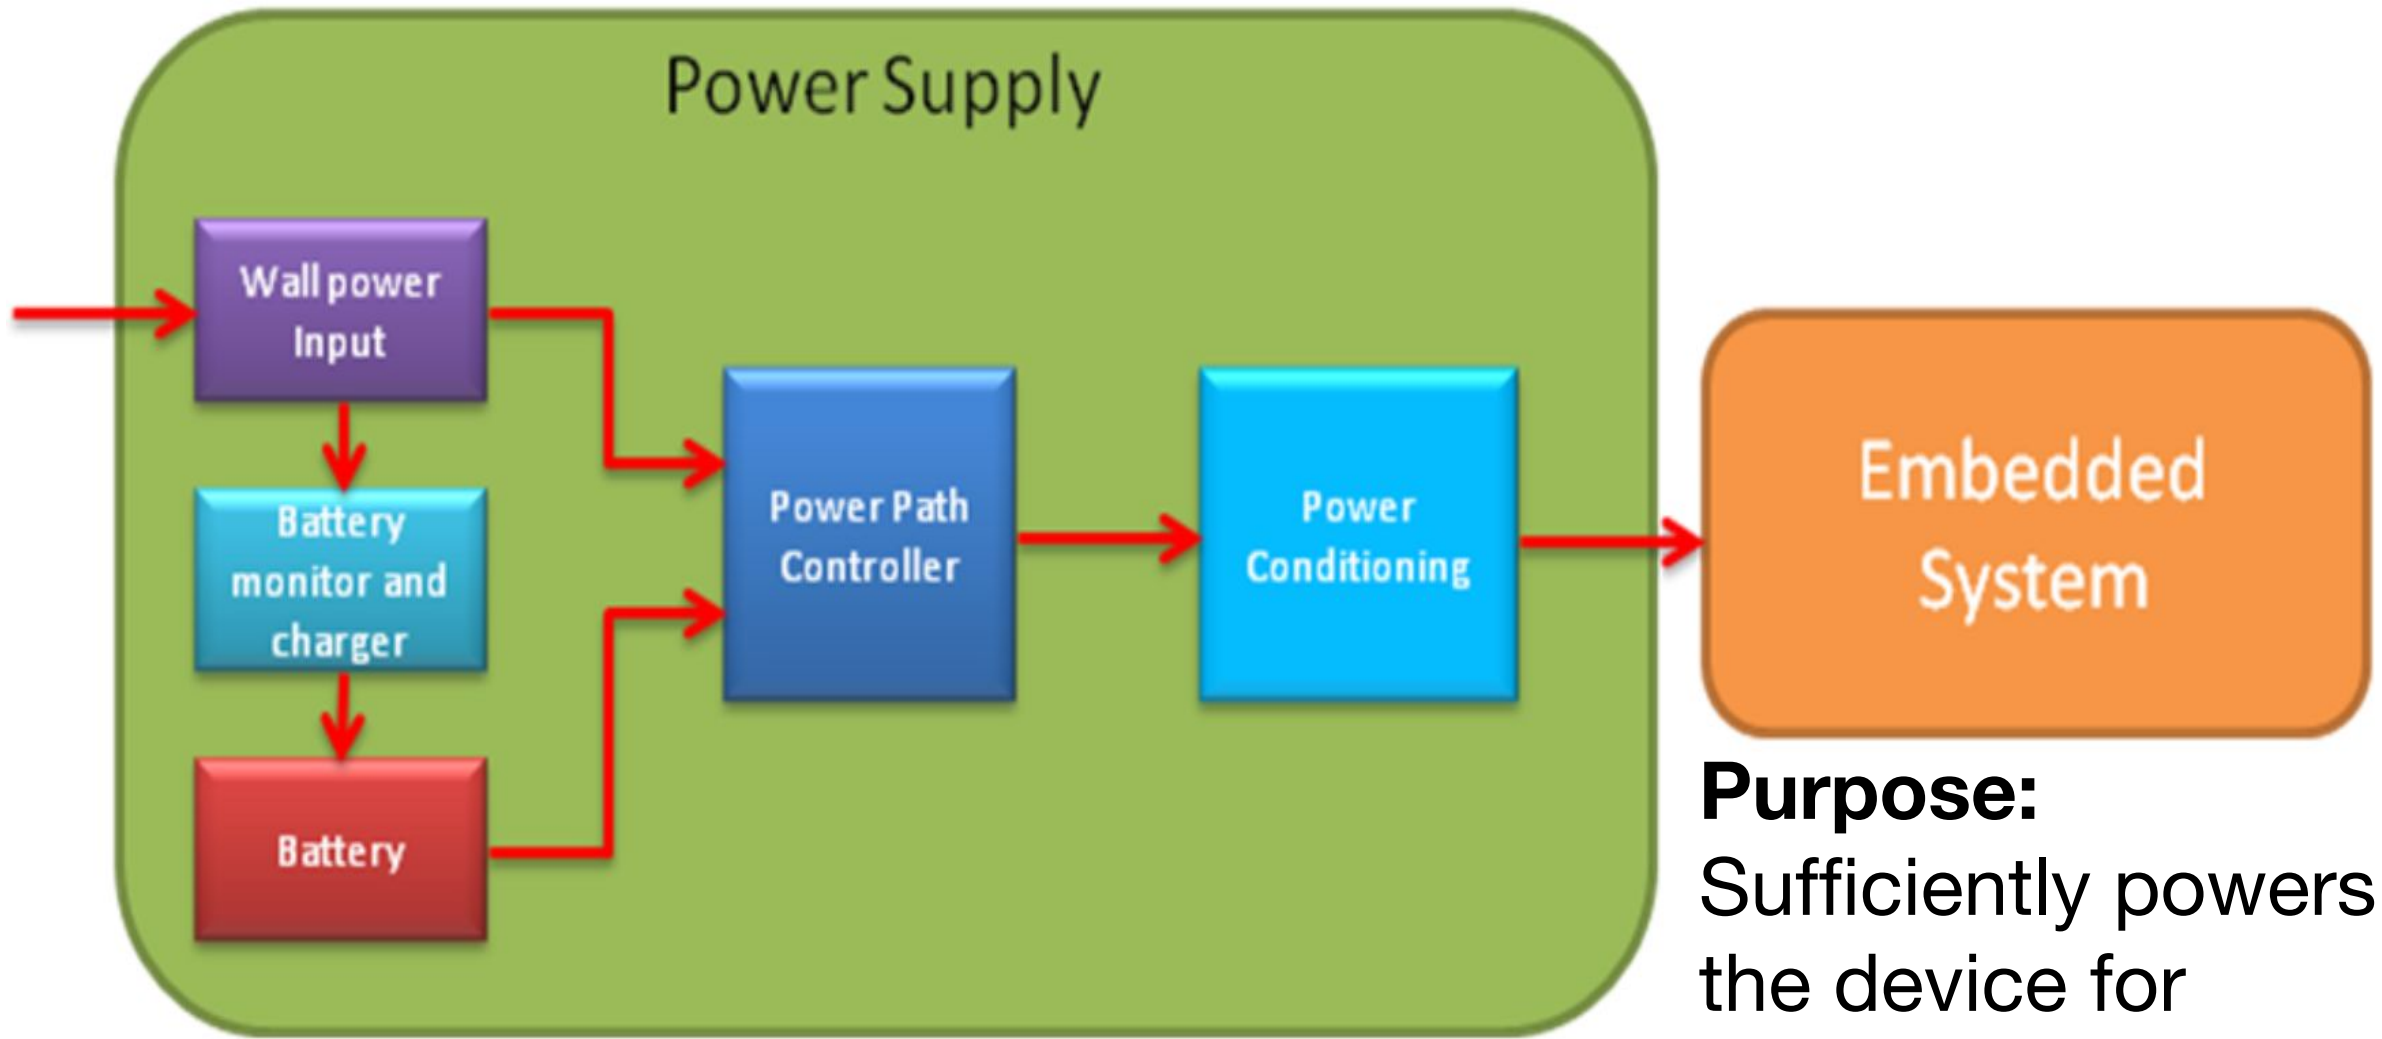

RFM69HCW

PROCESSOR FOR COMMUNICATIONS AND LOCATION MODULES

| PART NAME | POWER CONSUMPTION | THROUGHPUT | MEMORY SIZE | SUPPORTED PROTOCOL | SRAM | CLOCK SPEED |
|--------------------|-------------------|---|-------------------------|--|---|-------------|
| ARM CORTEX M4F, M0 | 2.82 mA at 48 MHz | 1.25 DMIPS per MHz, at 48 MHz operation | 323-KB Flash, 80-KB RAM | (2) UART, (2) SSI, (1) I2C, (1) I2S | (5) 16-KB blocks, 8-KB cache, 4-KB SRAM for sensor control engineer | 48 MHz |
| ATmega328P | 0.3 mA at 1 MHz | 20 MIPS at 20 MHz | 32-KB Flash, 2-KB RAM | (1) UART, (2) SPI, (1) I2C | 1-KB EEPROM, 2-KB | 20 MHz |
| ATmega2560 | 0.5 mA at 1 MHz | 16 MIPS at 16 MHz | 16/32/64KB Flash | (4) USART (1) SPI | 4-KB EEPROM 8-KB SRAM | 16 MHz |

POWER MODULE

Type:
Switch mode power supply

Purpose:
Sufficiently powers the device for sustained periods of time.

POWER

BATTERY MANAGERS

| PART NAME | INPUT SUPPLY VOLTAGE RANGE | PROGRAMMABLE CHARGE CURRENT RANGE | CHARGE VOLTAGE ACCURACY | TRICKLE CHARGE CURRENT | EXTERNAL COMPONENTS | ANALOG PROGRAMMABLE |
|----------------|----------------------------|-----------------------------------|-------------------------|------------------------|---------------------|---------------------|
| <i>TP4056</i> | 4-8V | 130-1000mA | 1.5% | 120-140mA | 10 | Yes |
| <i>LT1512</i> | 2.7-25V | 1000mA | 1% | - | 13 | No ** |
| <i>BQ25606</i> | 3.9-13.5V | 1000-2500mA | 0.5% | - | 14 | Yes |

- Input supply voltage: **5V**
- Desired charging current range: **1000-2600mA**
- Acceptable charge voltage accuracy: **0.5-1.5%**

**programmed with a PWM signal from a processor

Battery Charger: BQ25606

| MANUFACTURER | NANJING TOP POWER ASIC CORP. |
|------------------------|------------------------------|
| Part No. | BQ25606REGR |
| Price | \$2.68 |
| Current Required | 3mA |
| Program Charge Current | 1000mA |
| accuracy within | 0.5% |

DIMENSIONS:
4 x 4 mm

Lithium Ion or Nickel-Metal Hydride?

LITHIUM ION

- Higher energy density
- Rechargeable cycle is 4 times faster than NiMH
- Higher self discharge rate
- Smaller and lighter
- More resistant to varying temperatures

NICKEL METAL HYDRIDE

- Found anywhere

Lithium Ion 18650 3.7 Volt

REGULATORS

| PART NAME | OPERATING SUPPLY CURRENT | SUPPLY VOLTAGE RANGE | OUTPUT VOLTAGE | IOUT RANGE | EXTERNAL COMPONENTS | SWITCHING FREQUENCY |
|-----------|--------------------------|----------------------|----------------|------------|---------------------|---------------------|
| LT1108 | .11mA | 2-12V | Adjustable | .8A | 5 | 19kHz |
| LT1371 | 4mA | 2.7-25V | Adjustable | 3A | 8 | 500 kHz |
| TCR2EF | 22mA | 1.5-5.5V | Not Adjustable | 35uA | 2 | ** |
| LT1111 | .3mA | 2-12V | Adjustable | .8A | 4 | 72kHz |
| MIC4685 | 5mA | 4-30V | Adjustable | 3A | 7 | 200kHz |

- Needed low input voltage
- Needed high output current

Regulator: LT 1371

DIMENSIONS:
16 x 10 mm

PACKAGE: 7-DD

| | |
|------------------|-----------------------------------|
| Manufacturer | Analog Devices/ Linear Technology |
| Part No. | LT1371CR#PBF |
| Price | \$10.14 |
| Voltage supplied | 5V |

Regulator: LT 1108

DIMENSIONS:
4 x 5 mm

PACKAGE:
8-SOIC

| | |
|------------------|-----------------------------------|
| Manufacturer | Analog Devices/ Linear Technology |
| Part No. | LT1108CS8#PBF |
| Price | \$5.26 |
| Voltage supplied | 1.8V & 3.3V |

Power Draw per Component

| Device | Current in |
|----------------------|------------------|
| RFM69HCW Transceiver | 130mA |
| nRM24I01 Transceiver | 12.3mA |
| Neo-6M | 39mA |
| ATmega328p x 2 | 0.6mA |
| Raspberry Pi | 2500mA* |
| MEMS GPS | 3.11mA |
| TOTAL CURRENT | 2684.71mA |

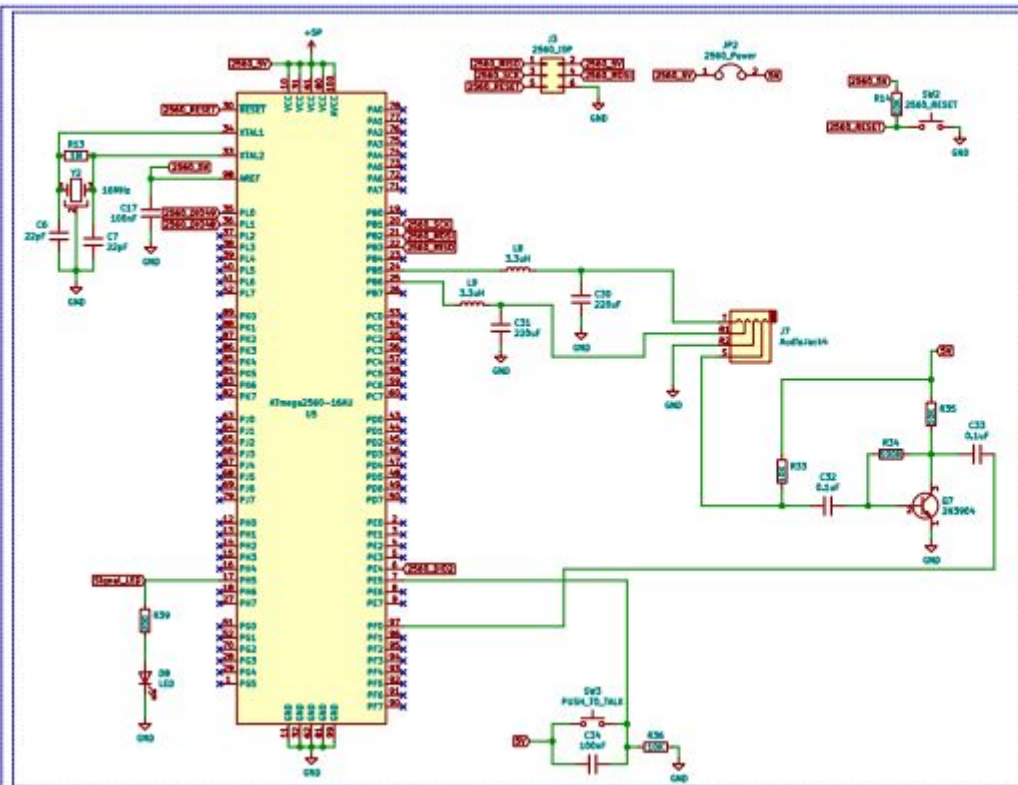

$$\frac{10400}{2684.71} = 3866 \approx 3.8 \text{ hours of runtime}$$

*Anticipated current draw is from 1000-10000mA

MAIN PCB SCHEMATIC

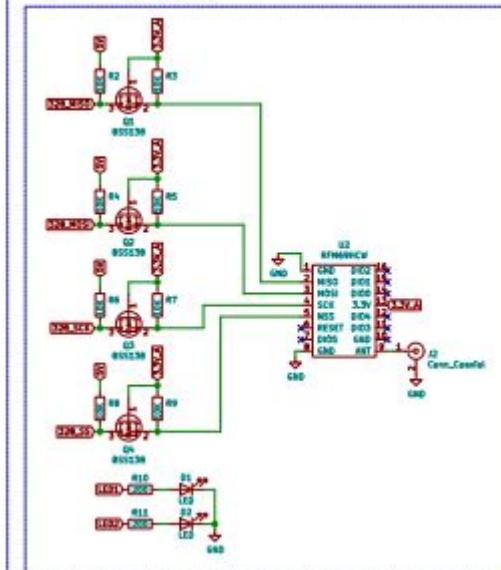

2560 CIRCUITS

NRF CIRCUIT

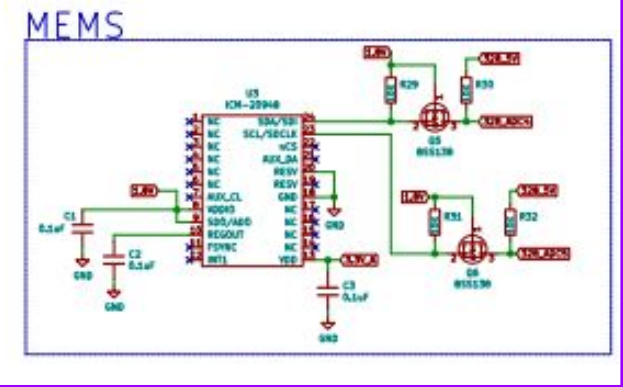

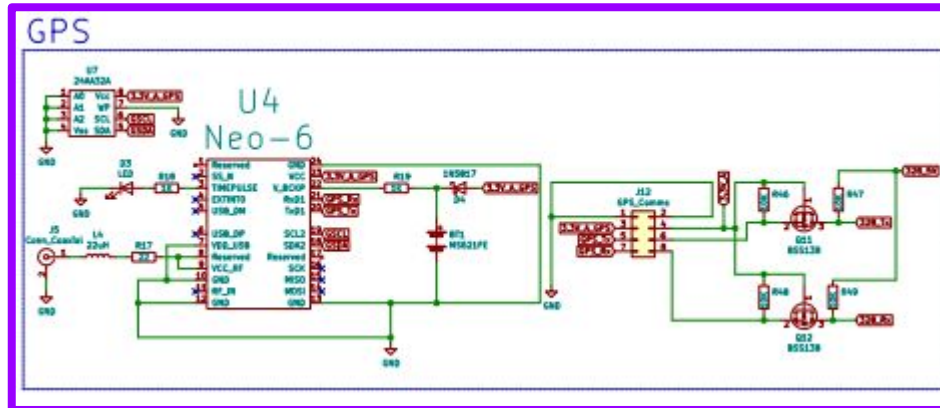

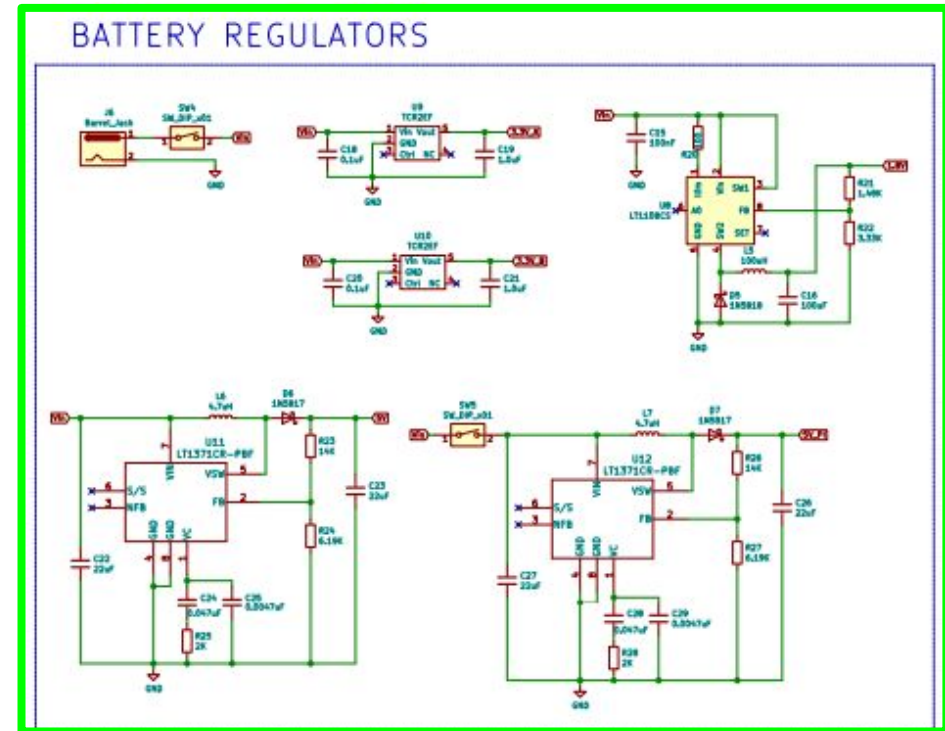

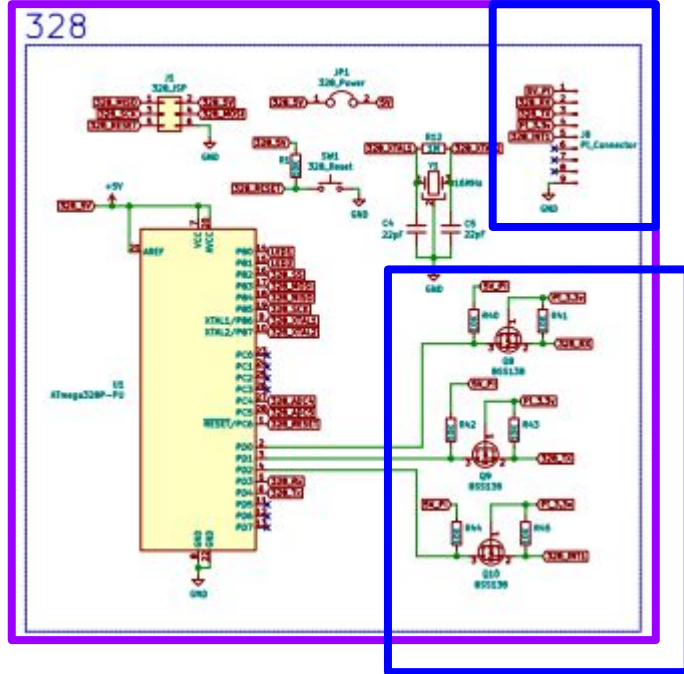

328 RFM69

Major Components and circuits:

- Location Module
- Vision Module
- Communications Module
- Power Module

MAIN PCB SCHEMATIC CONTINUED

MAIN PCB LAYOUT

MAIN BOARD CONSIDERATIONS

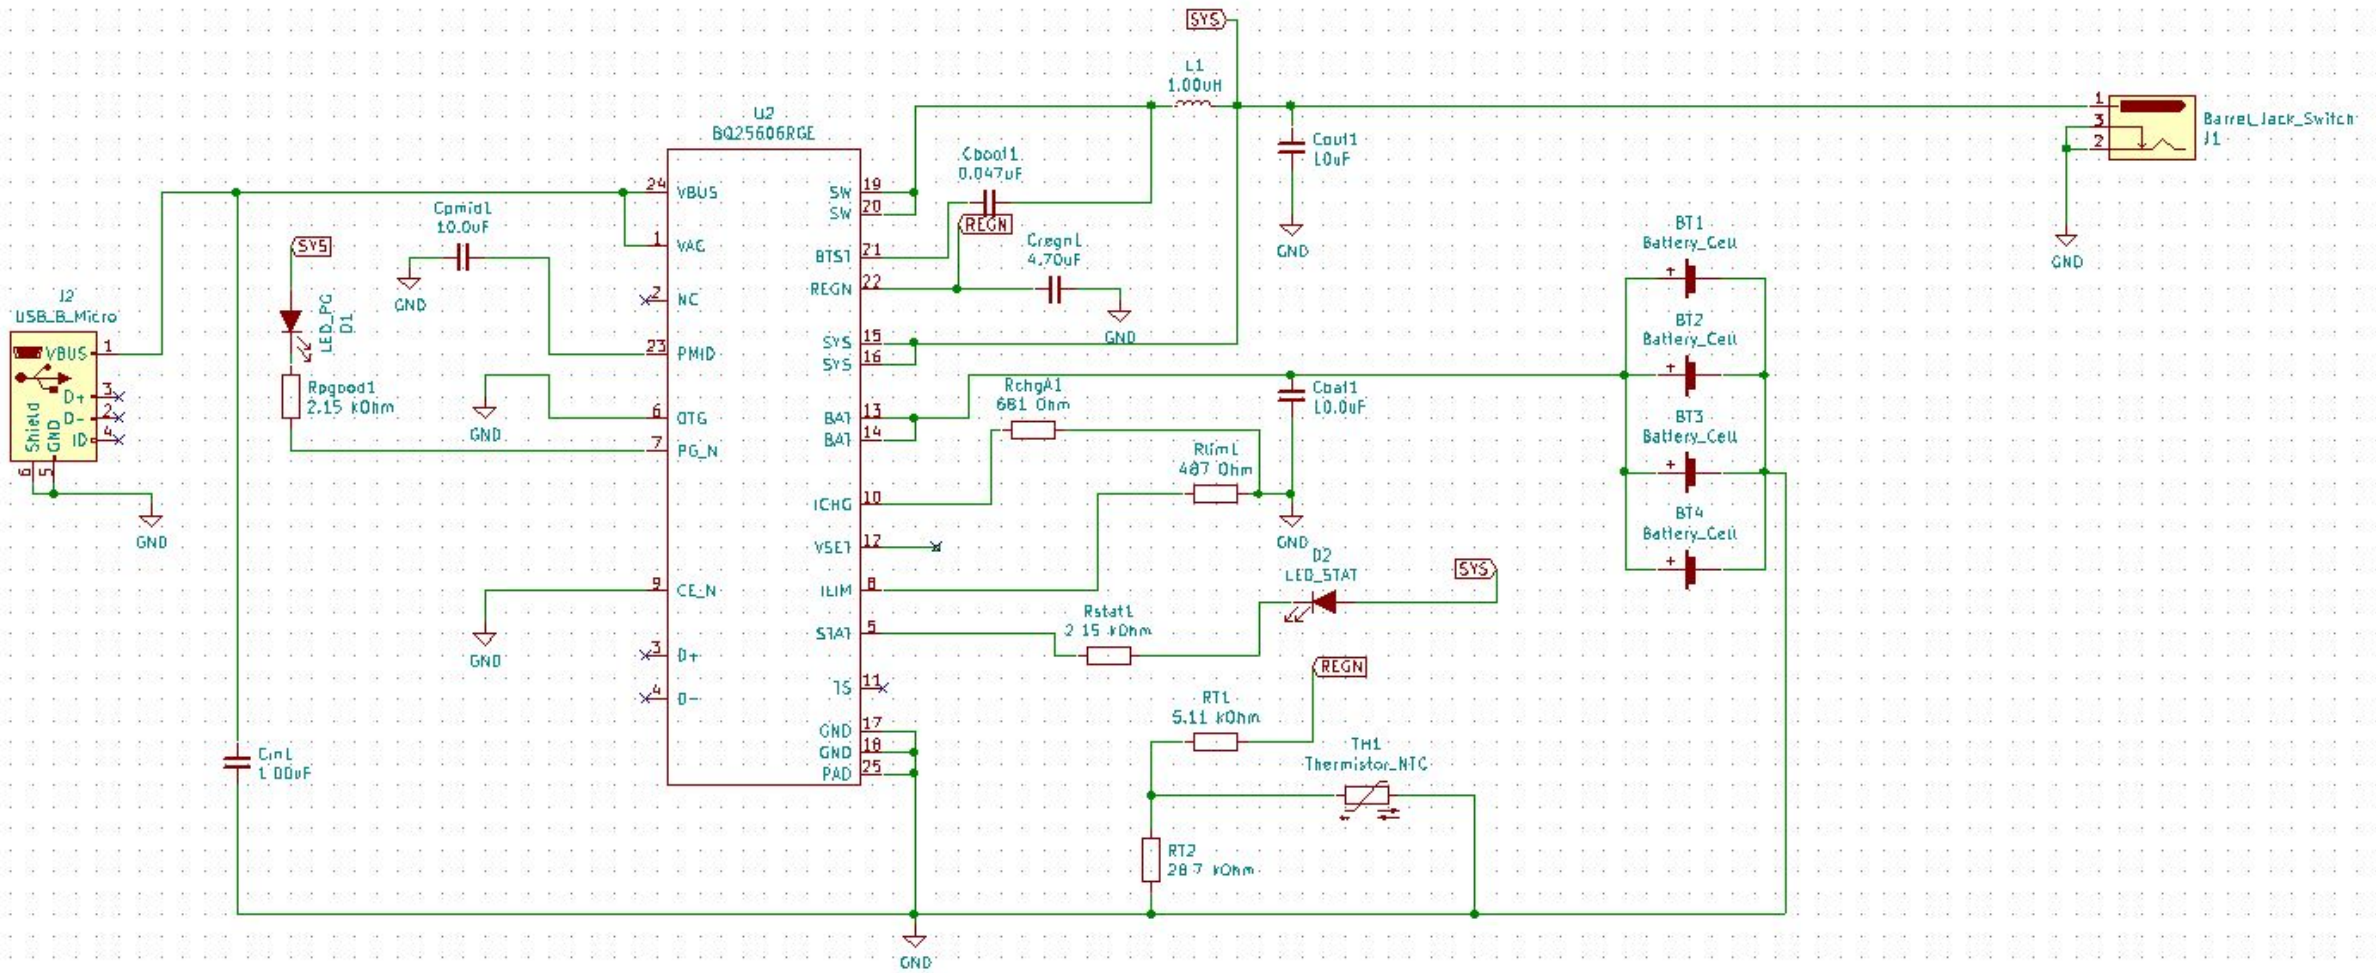

COMMUNICATIONS MODULE

- Insulative Ground Plane
- 50Ω transmission line to antenna for max power transfer
- Separate radio placement
- Short Trace distance

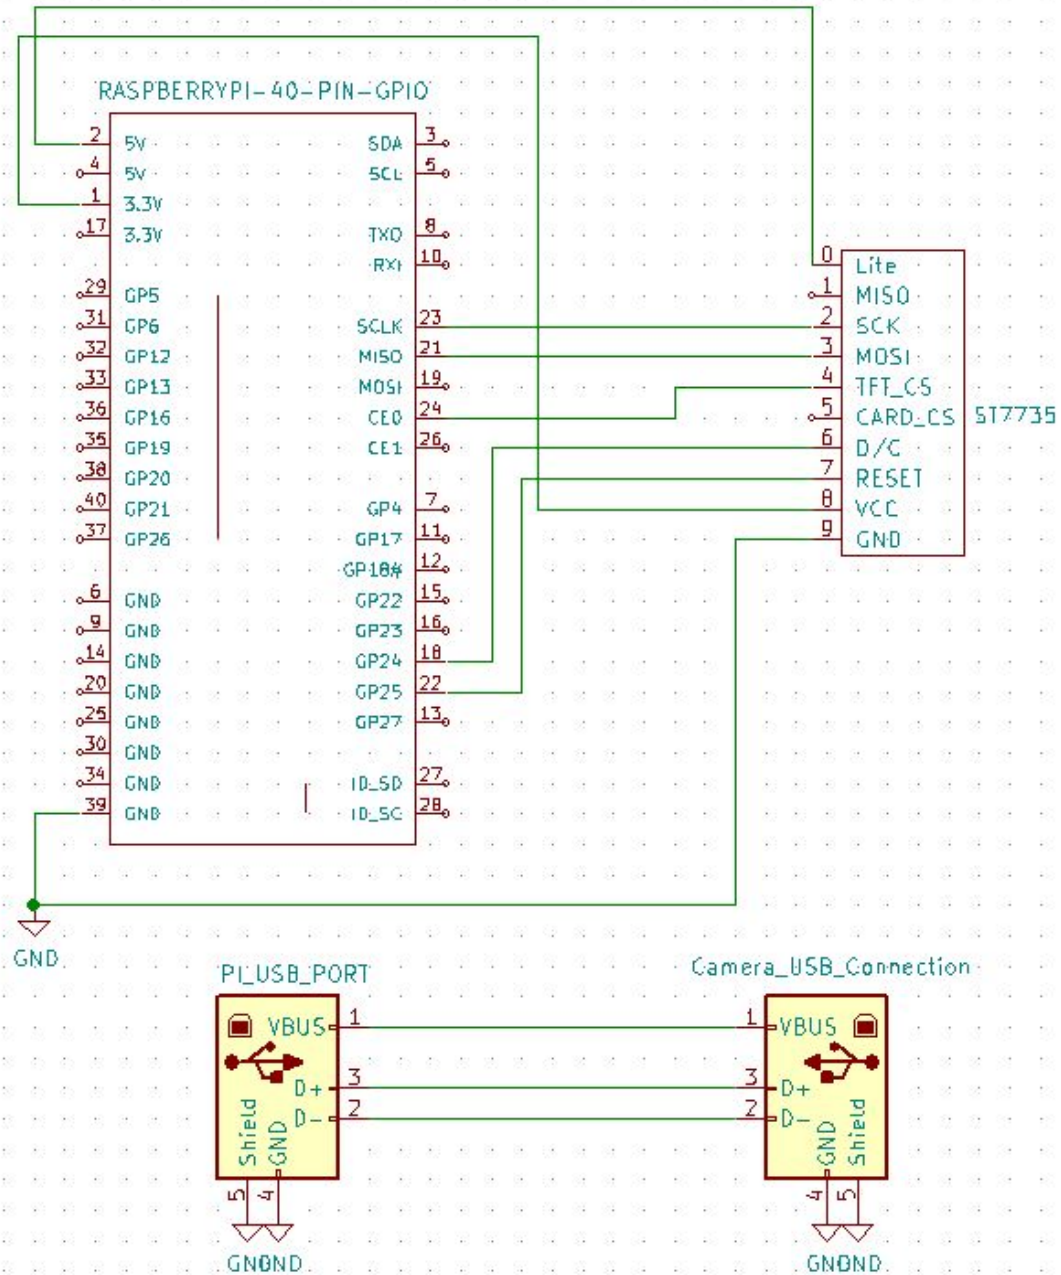

POWER PCB SCHEMATIC

POWER PCB LAYOUT

VISION SCHEMATIC

SOFTWARE TOOLS FOR ATmega CHIPS

- ATmega chips run on C++
- Arduino IDE is native. There are other IDE's but they are modified versions of the Arduino IDE
- Open Source Arduino Libraries are readily available
- National Marine Electronics Association(NMEA) Regulates GPS communications and GPS data formats

OPERATING SYSTEMS

| OS | PROS | CONS |
|------------|-----------------------------------|------------------------------|
| Raspbian | Native OS for Raspberry Pi | Bloated with extra software |
| Arch Linux | Less extra programs than Raspbian | Not as optimized as Raspbian |
| Windows | Easiest to use | Slowest and least optimized |

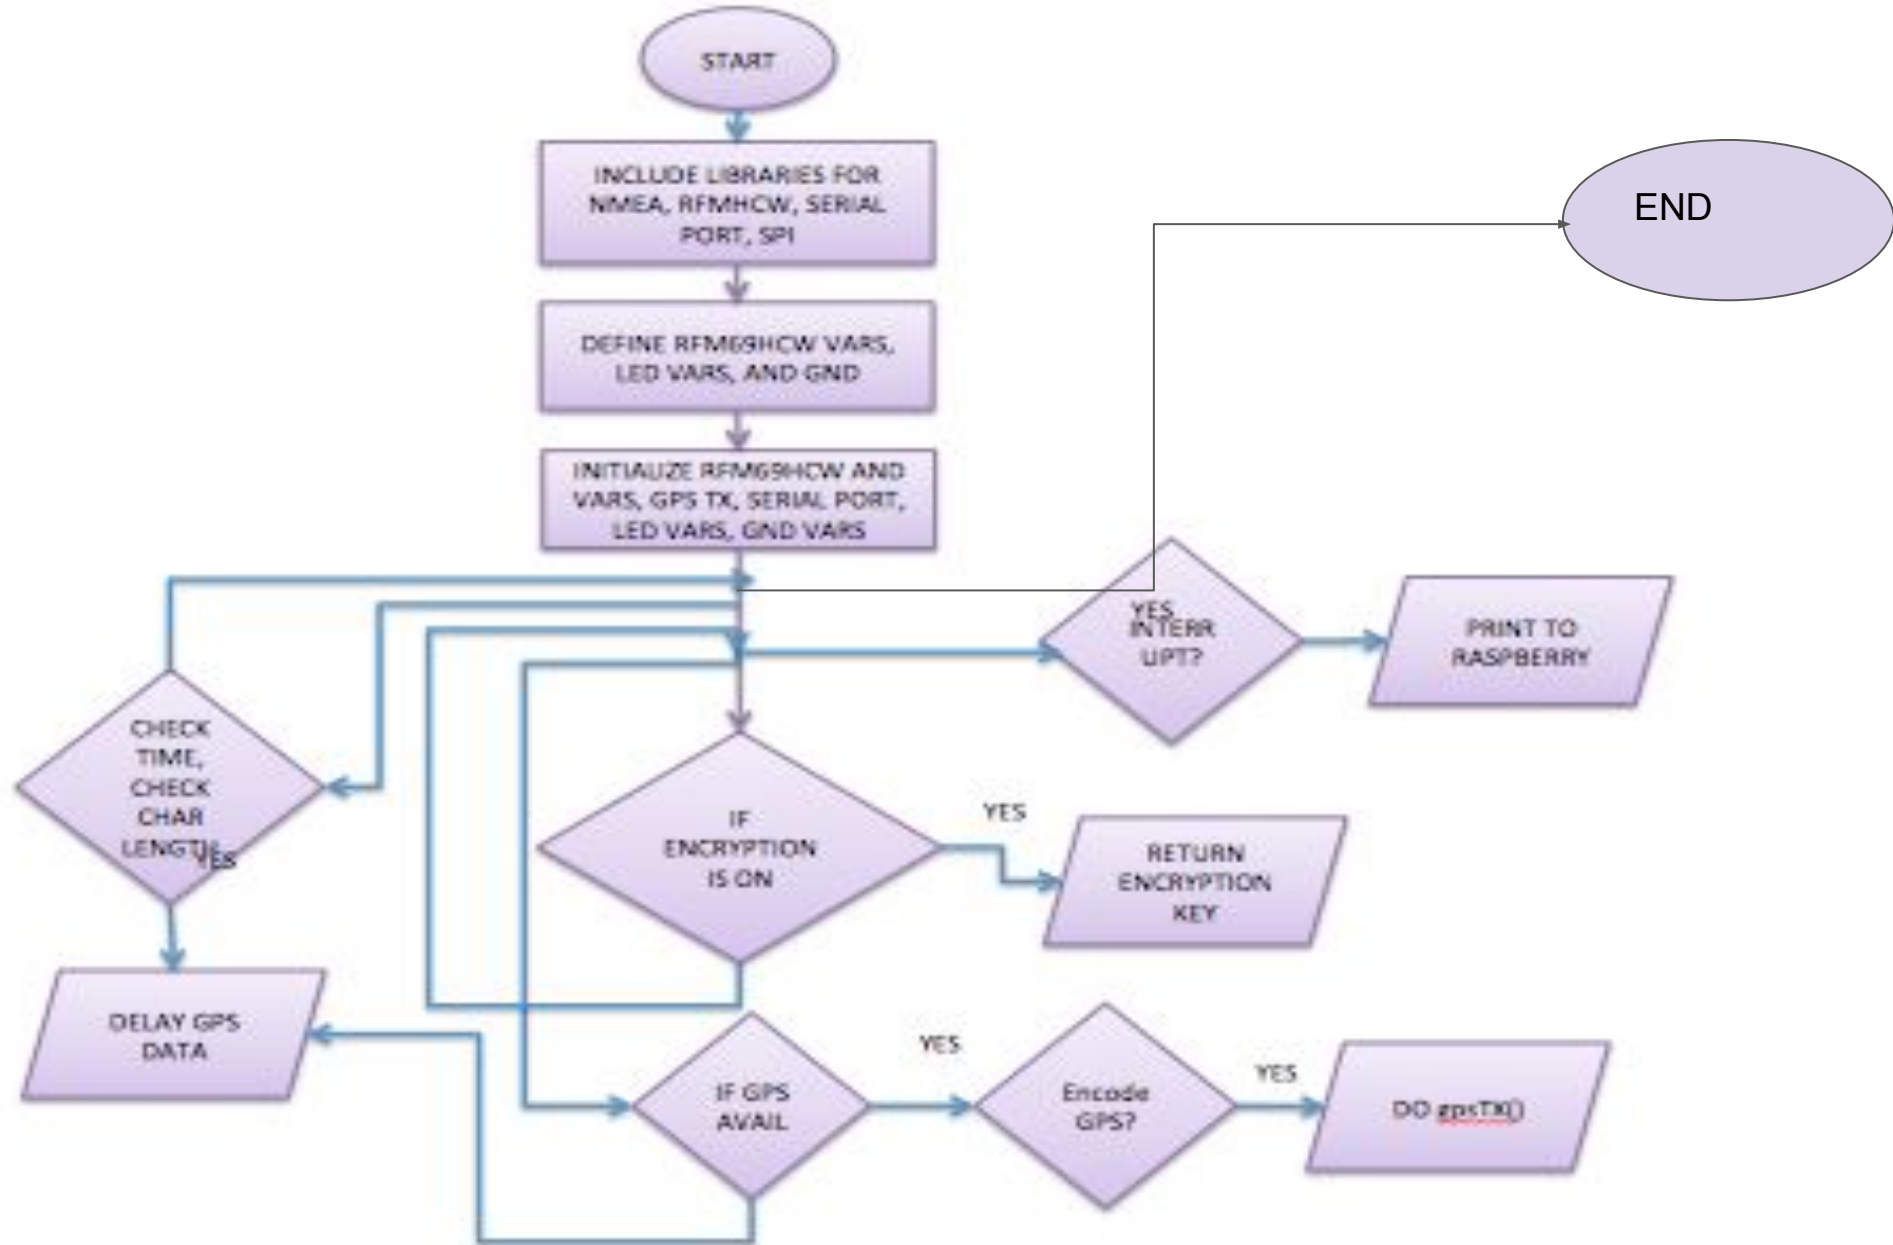

COMPUTER VISION LIBRARY

| LIBRARY | PROS | CONS |
|---------|---|---------------------------------|
| OpenCV | Documentation and large number of functions | Can be harder to learn |
| Mahotas | Easier to start than OpenCV | Fewer Optimizations than OpenCV |
| Skimage | Easiest option | Fewest Functions |

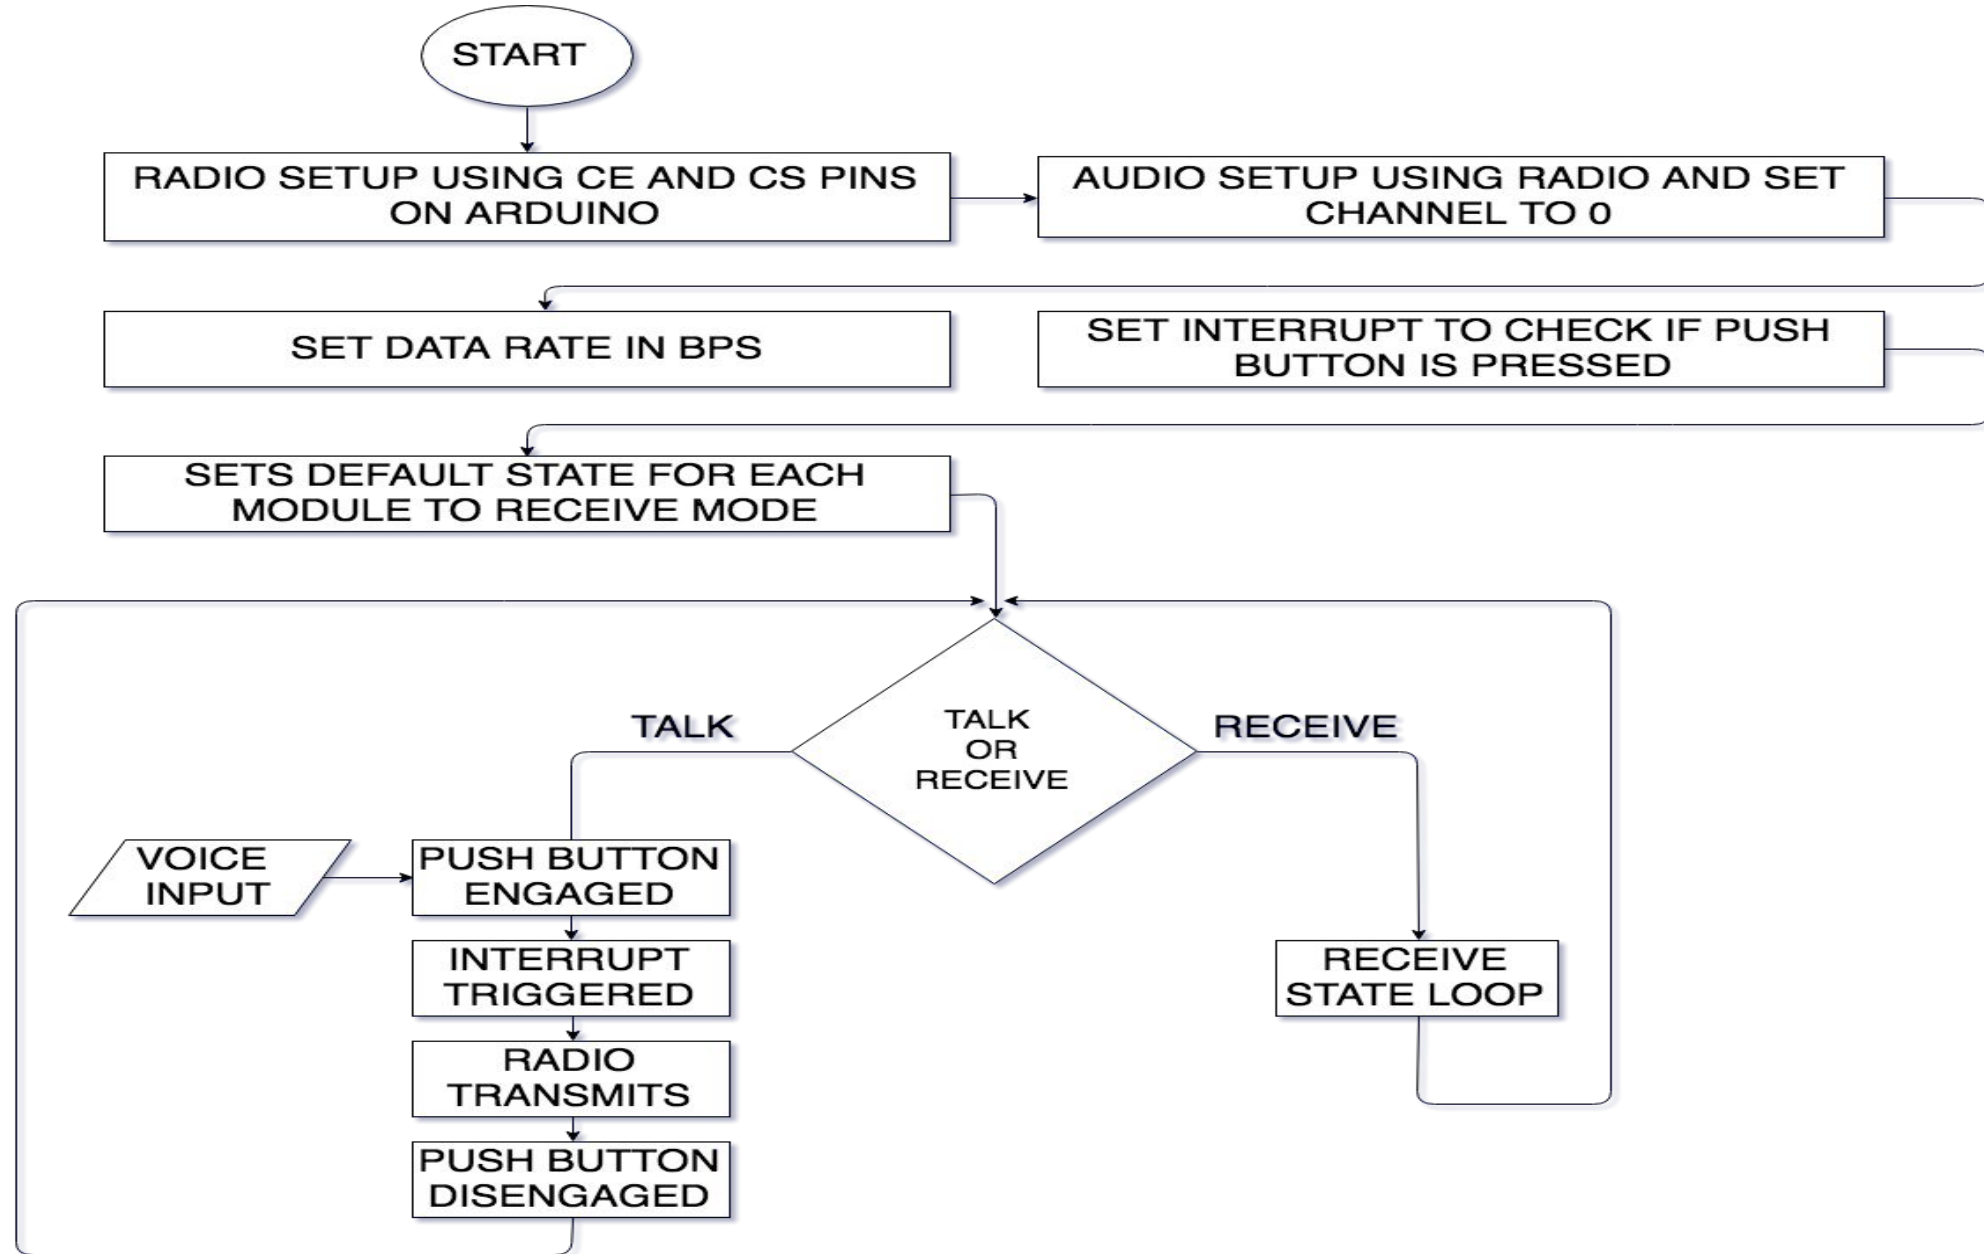

Version of OpenCV

| LIBRARY | PROS | CONS |
|---------|---|---|
| C++ | Original OpenCV library | C++ is not as easy to code in as Python |
| Python | Easier to use, uses the C++ code | Can be slower if code is not optimized |
| Java | Easiest to use for those familiar with Java | Slowest of the three |

Project Management Insight - Cost vs. Influence

Source: WBDG, www.wbdg.org

Minimum Viable Product(MVP)

Opportunity for Influence Insights:

- As the project gets closer and closer to construction, there is much less opportunity to influence changes in design

Cost of Changes Insights:

- As the project gets closer to the construction phase, the cost of changes to the design increase significantly

BUDGET

| Part Name | Quantity | Price Each | Price Total |
|--------------------------|----------|------------|-------------|
| Other components | varies | varies | ~\$208.24 |
| PCB | 1 | \$54.88 | \$54.88 |
| ATMEGA328P | 4 | \$2.14 | \$8.56 |
| POWER | | | |
| Batteries | 4 | \$5.95 | \$46.56 |
| Battery chargers | 8 | \$0.60 | \$4.80 |
| Regulators | 6 | \$5-10 | \$24.00 |
| Breadboard testing parts | varies | varies | ~\$60.00 |

FINAL BUDGET: ~\$1500

| Part Name | Quantity | Price Each | Price Total |
|-----------------------------|----------|------------|------------------|
| COMMUNICATION | | | |
| n24L01+ transceiver | 2 | \$3.50 | \$7.00 |
| RFM69HCW transceiver | 2 | \$5.95 | \$11.90 |
| Headphones | 1 | \$5.99 | \$5.99 |
| VISION | | | |
| Raspberry Pi | 2 | \$35.00 | \$70.00 |
| Camera | 2 | \$40.00 | \$80.00 |
| Screen | 2 | \$19.99 | \$39.98 |
| LOCATION | | | |
| GPS | 2 | \$49.00 | \$98.00 |
| MEMS Motion Tracking Device | 2 | \$15.00 | \$30.00 |
| Total Price | | | ~\$763.90 |
