

ASLBoT

Assisted Sign Language Bot Translator

Group #14

Gustavo Camero - CpE

Luis Hurtado - EE

Michael Loyd - EE

Jared Spinks - CpE

Assigned Professor

Dr. Samuel Richie

Advisor/Client

Dr. Chung Yong Chan

Motivation

- Member works at a clinic
 - Noticed a lack of efficient translation
 - Looking for standardized language interpretation
 - No support for sign language
- Classroom Setting
 - Interpretation Services are not adequate
 - Use of ASL Translators is expensive

Motivation (cont.)

- No current marketable product
 - Sign language machine translation still in research phase
 - No open-source large corpora for English to ASL
 - No standardized training framework

Goals & Objectives

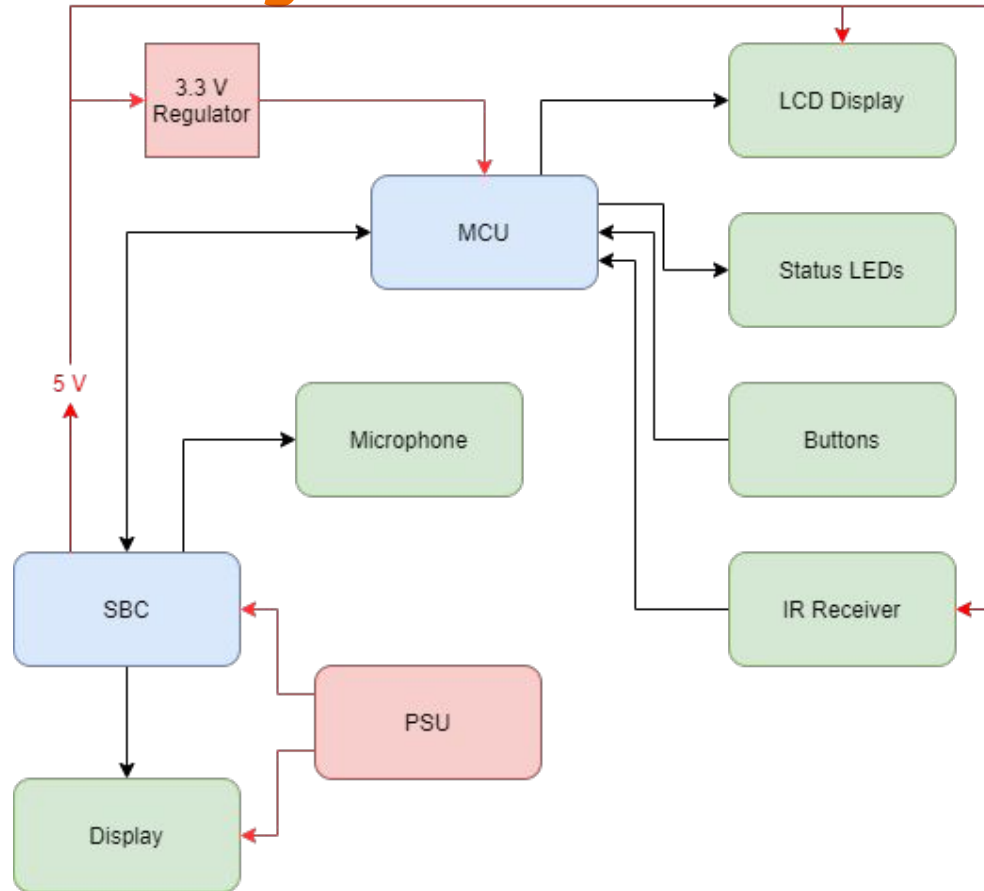

- Translate English speech into American Sign Language.
- Use small corpora to achieve ASL translations using a training framework
- Perform speech-to-text and speech-to-ASL language translations.
- Indicate various statuses of the device via LEDs.
- Capture audio at frequencies around natural human pitches that can be translated into text via speech-to-text algorithms.
- Display responsive high-quality animations of sign language gestures.
- Receive manual inputs from the user such as start/stop recording.

Requirement Specifications

Component	Parameter	Design Specification
Microphone	Frequency Response	300 Hz to 3kHz
Memory	Size	32 GB
Power Supply	Power	32 W
System	Translation Accuracy	20% (BLEU Average)
System	Cost	\$500
System	Response	< 5 seconds
Vocabulary	Model Complexity	> 50 words
Neural Machine Translation	Size	< 1000 Entries

Hardware Components

Overall Block Diagram

MCU Selection

	GPIO Pins	ADCs	Communication Protocols	Cost
STM32L162ZDT6	115	12-bit/ 40 Channels	I ² C, I ² S, SPI, USART, USB	\$9.80
STM32L151RDT6TR	51	12-bit/ 40 channels	I ² C, I ² S, SPI, USART, USB	\$6.85
MSP430FR6922	46	12-bit/ 8 channels	I²C, SPI, UART	\$5.33
MSP430FR6989	83	12-bit/ 16 channels	I ² C, SPI, UART	\$7.86

MSP-EXP430G2 w/ MSP430G2553 on COM3
```

Code Composer Studio

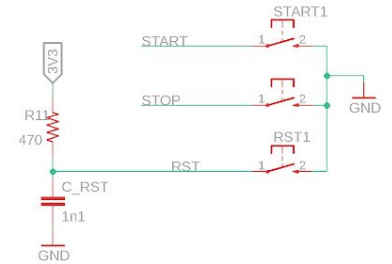

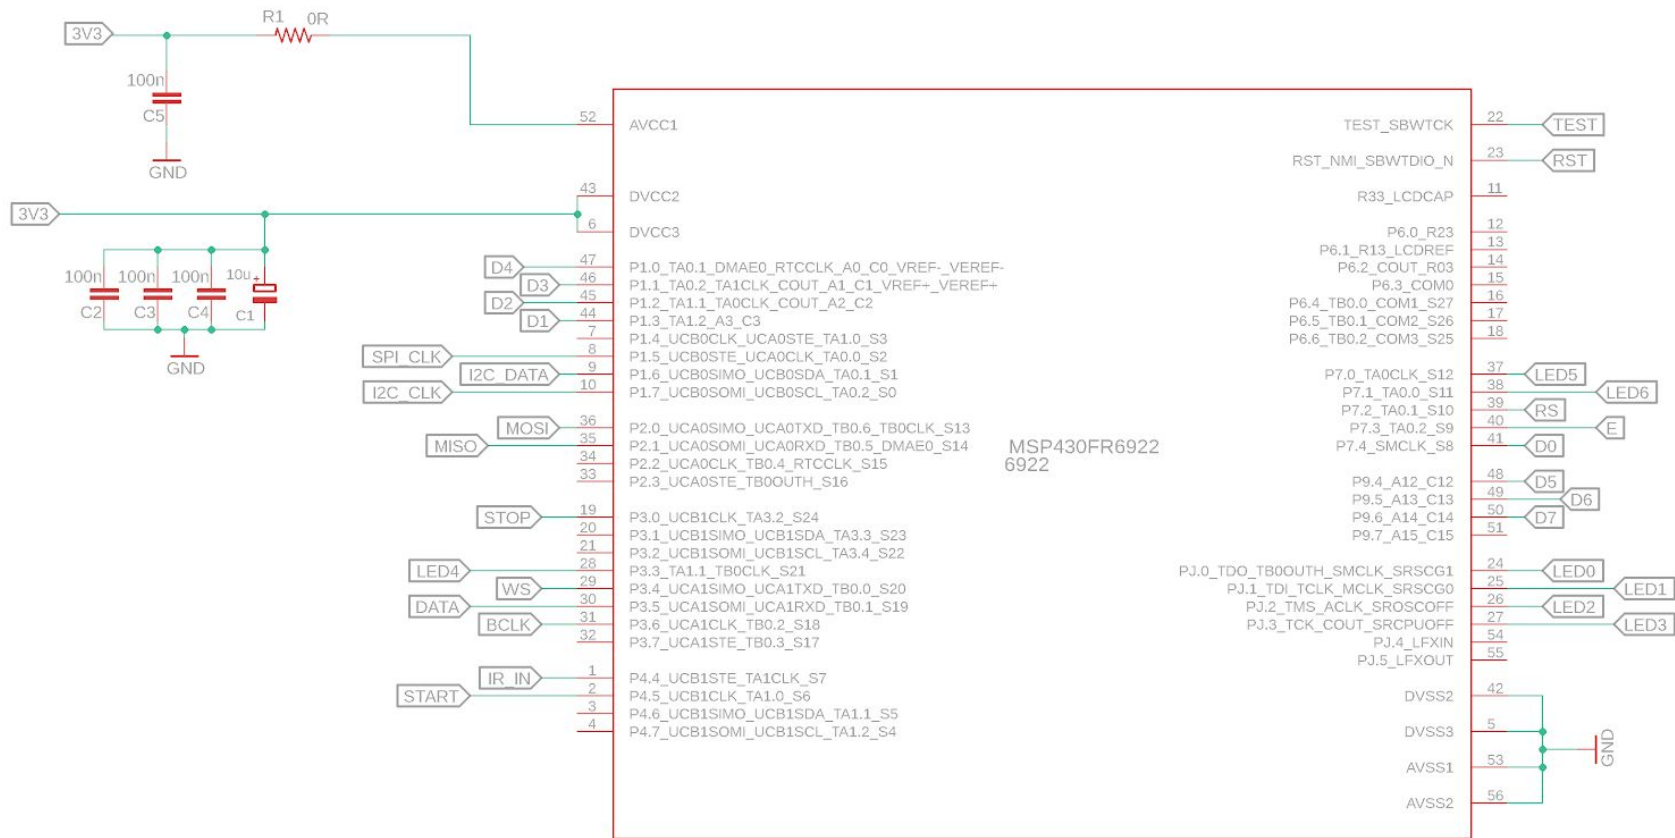

MCU Functionality

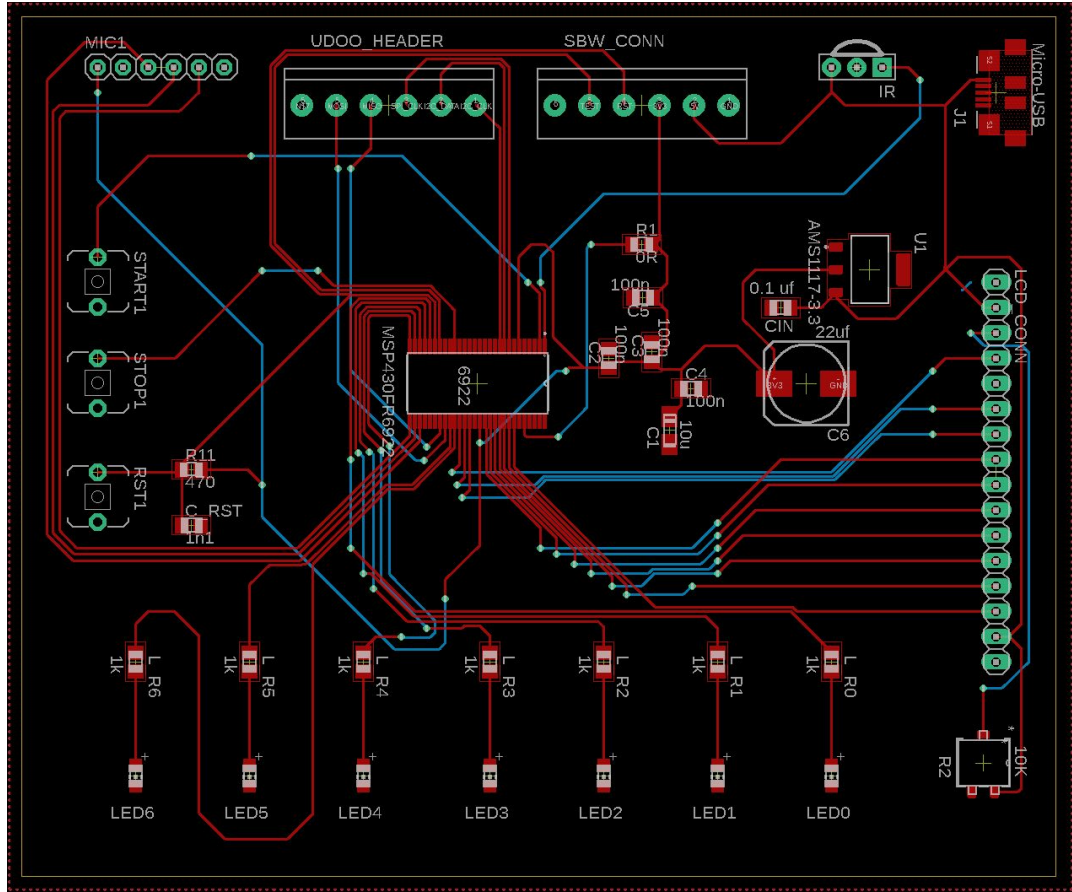

- Uses LEDs to indicate overall status of system
- Utilizes LCD to indicate recording status
- Communicates with SBC to send control signal and receive updates
- IR sensor for wake functionality
- On-board buttons to start and stop recording and reset

Hardware Diagram

Board Layout

Microphone Selection

	Frequency Range	Output	Interface	Cost
Mini USB Microphone	100 Hz - 10 kHz	Digital	USB	\$4.95
SparkFun MEMS Microphone (INMP401/ADMP401)	100Hz - 15 kHz	Analog	ADC	\$10.95
MEMS Microphone (SPH0645LM4H)	50 Hz - 15 kHz	Digital	I ² S	\$6.95
Blue Snowball	40Hz to 18kHz	Digital	USB	\$49.99

SBC Selection

	Architecture	Communication Protocols	OS	RAM	Memory	Cost
NVIDIA Jetson Nano	ARM64	I ² C, SPI, UART	Linux	4 GB	External Only	\$99.00
ASUS TinkerBoard	ARM64	I ² C, SPI, UART, I ² S	Linux	2 GB	External Only	\$70.00
UDOO x86 Advanced Plus	x86_64	I ² C, SPI, UART	Linux Windows	4 GB	32 GB	\$176.00

Machine Translations

Machine Translation

Rule-Based MT (RBMT)	Statistical MT (SMT)	Neural MT (NMT)
<ul style="list-style-type: none">• Large database of linguistic rules and millions of bilingual dictionaries.• For the use of RBMT in text to ASL text translation, a massive database with the rules and resources will need to be created.	<ul style="list-style-type: none">• Statistical models that have parameters based on the analysis of monolingual and bilingual corpora.• Relies heavily on existing corpora, minimum of 2 million words.• CPU-intensive	<ul style="list-style-type: none">• Uses neural networks with training sets to tune weights.• Examines entire sentence before translating, maintains the context of the sentence.• Training requires GPU• Large Training sets

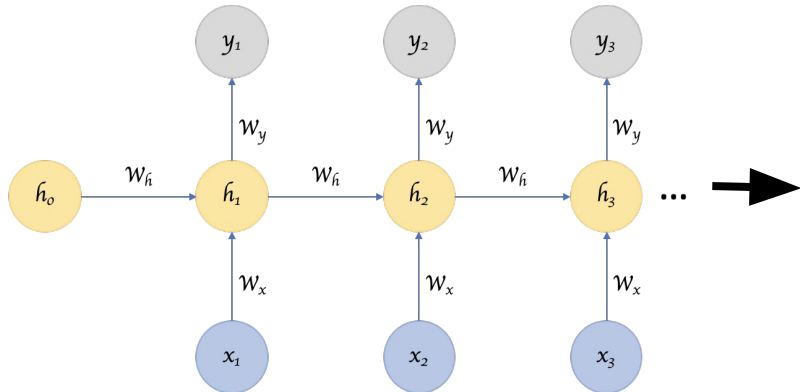

OpenNMT

Open source and user support
lacked in other systems

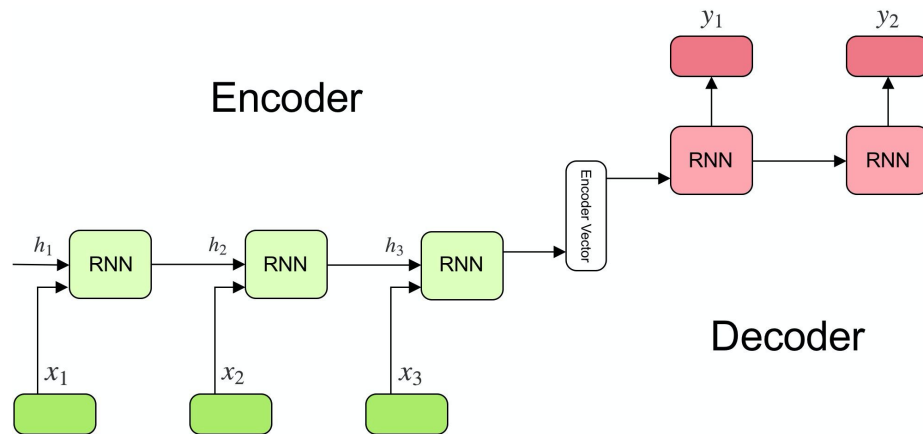

Provides Pytorch implementation

Based on seq2seq models that
allow robust translation

Recurrent Neural Network

Sequence-to-sequence

OpenNMT

NMT Issue	Requires GPU for training
------------------	---------------------------

Google Colaboratory (Colab)

- Allows users to write and execute Python code on google's servers
- Free available GPU for processing
- Zero Configuration required

The logo for Google Colaboratory, featuring the word 'colab' in a lowercase, rounded, orange font.

Training OpenNMT

Requirements:

- Source (English)
- Target (Sign language Gloss)
- Source Validation
- Target Validation

Source	Target	Source Validation	Target Validation
I know sign language	ME KNOW SIGN	I want to know sign language	ME WANT KNOW SIGN LANGUAGE

Training OpenNMT - Issue

NMT Issue	Requires large Corpora
------------------	------------------------

Two approach system:
<ul style="list-style-type: none">• Specific Domain• Redundancy

Training OpenNMT - Approach 1

Approach #1 Specific Domain:

- Limits variety of words used
- Corpora based on daily school

hurry we need to go now
on campus
I need to write this paper tonight
this project is due tomorrow
my lecture starts in five minutes
I am going to college this semester
what classes are you taking
I took that class last semester
I wanted to go to the student union
did you finish the paper last night
I was absent from class yesterday
Was the homework supposed to be done individually
I am making new friends in college
I made a friend yesterday
Do you want to be friends
there are a few ways to get to that building
why is the campus so large
the engineering building is very big
I need help because I can not find this classroom
I can't find this classroom
I need help making these signs
How many buildings are there on campus
How much did you write for the paper

Training OpenNMT - Approach 1 Results

- Improvement in translations
- Still very limited translations

```
SENT 1: ['where', 'can', 'I', 'find', 'the', 'classroom', 'building']  
PRED 1: ME NEED HELP MAKE SIGN SIGN  
PRED SCORE: -0.0293
```

```
SENT 1: ['I', 'need', 'help', 'finding', 'the', 'classroom']  
PRED 1: ME NEED HELP MAKE SIGN SIGN  
PRED SCORE: -0.0002
```

Training OpenNMT - Approach 2

Approach #2 Specific Domain + Redundancy:

- Continue to limit variety of words used
- Breakdown existing sentences
- Introduce similar sentences

the engineering building is big

the engineering building

engineering building

building is big

engineering building is big

when did you finish your homework

when did you finish

did you finish your homework

finish your homework

Training OpenNMT - Approach 2 Results

Model now better suited to translate English to Gloss

```
SENT 1: ['where', 'can', 'I', 'find', 'the', 'classroom', 'building']  
PRED 1: ME NEED HELP MAKE SIGN SIGN  
PRED SCORE: -0.0293
```

First approach

```
SENT 1: ['where', 'can', 'I', 'find', 'the', 'classroom', 'building']  
PRED 1: WHERE ME CAN FIND CLASSROOM  
PRED SCORE: -0.0006
```

+Second approach

```
SENT 1: ['I', 'do', 'understand', 'the', 'homework']  
PRED 1: ME NOT WANT KNOW  
PRED SCORE: -0.2670
```

First approach

```
SENT 1: ['I', 'do', 'understand', 'the', 'homework']  
PRED 1: ME UNDERSTAND HOMEWORK  
PRED SCORE: -0.0006
```

+Second approach

Training OpenNMT - Approach 2 Results

The model may still struggle with some translations:

```
SENT 1: ['I', 'want', 'to', 'make', 'friends', 'this', 'semester']  
PRED 1: ME WANT MAKE FRIEND AT COLLEGE  
PRED SCORE: -0.0245
```

```
SENT 1: ['I', 'need', 'help', 'with', 'the', 'homework', 'because', 'it', 'is', 'difficult']  
PRED 1: ME NEED HELP BECAUSE CANNOT FIND CLASSROOM  
PRED SCORE: -0.0050
```

BLEU Score

Benefits:

- Quick calculation
- Simple score calculation
- Language does not matter
- Widely adopted (documentation available)

Problems:

- Shorter sentences (even if accurate) get close to zero scores
- Score changes depending on the reference file

BLEU = 13.81 62.0/30.2/14.1/1.6

Game Engine

- Functions of the game engine:
 - Display animations
 - Integration of text-to-speech, speech-to-text, and (possible) audio-to-WAV API

	Minimum RAM	Compatible with Linux-based ARM64	Compatible with x86_64	Community Support for Programming
Unity	None	No	Yes	Full
Unreal Engine 4	8 GB	Yes	Yes	Limited
Godot	4 GB	No	Yes	None

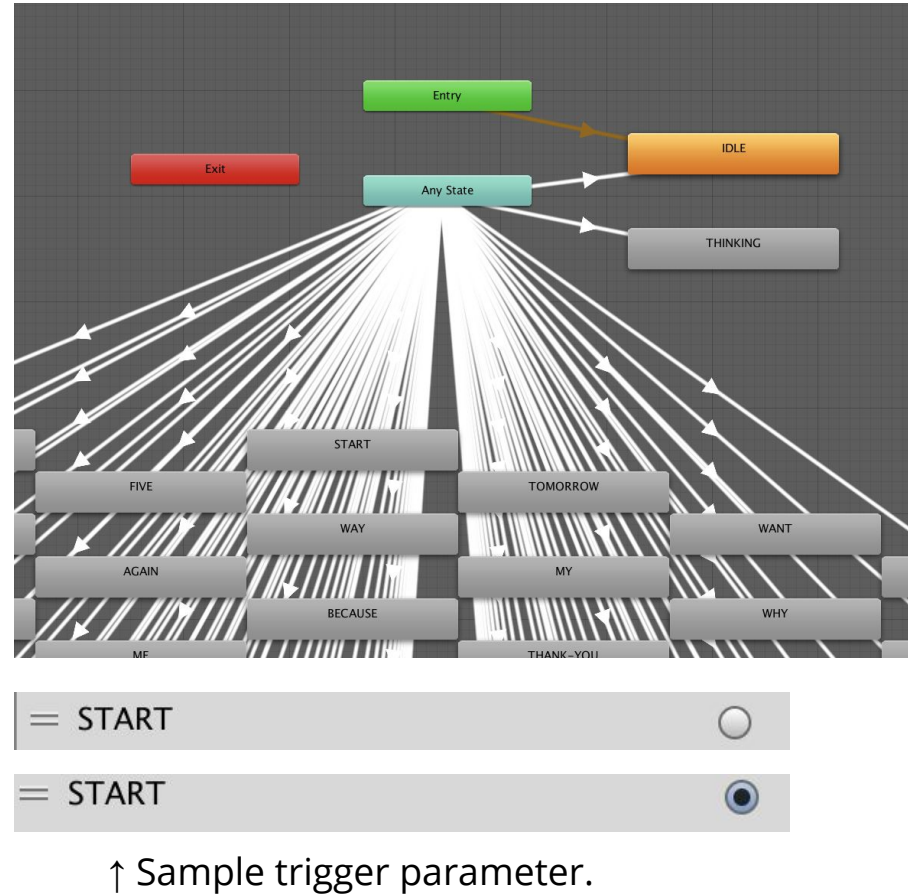

Video Rendering

- Dynamic state machine
- Hash Table used to map word as string to corresponding animation
- Trigger parameter used to start an animation

Video Rendering

- Dynamic state machine
- Hash Table used to map word as string to corresponding animation
- Trigger parameter used to start an animation

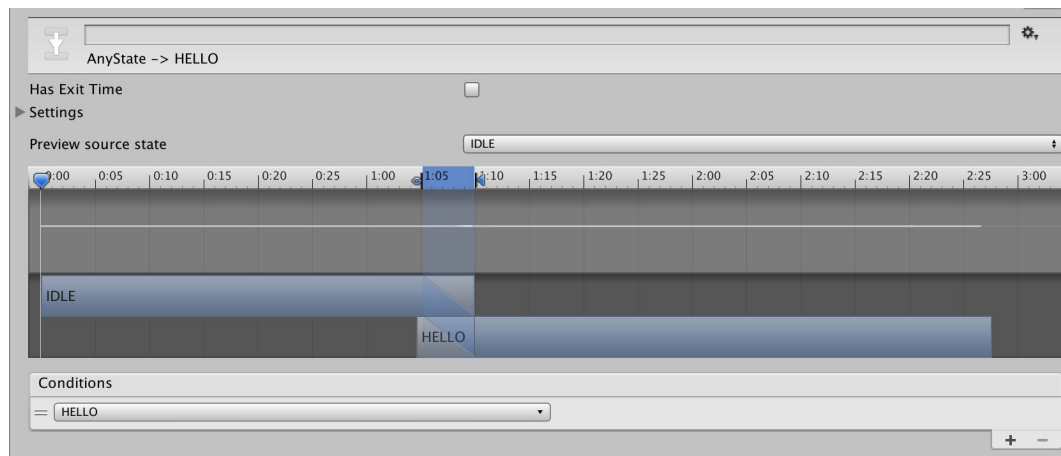

Video Rendering

- Dynamic state machine
- Hash Table used to map word as string to corresponding animation
- Trigger parameter used to start an animation

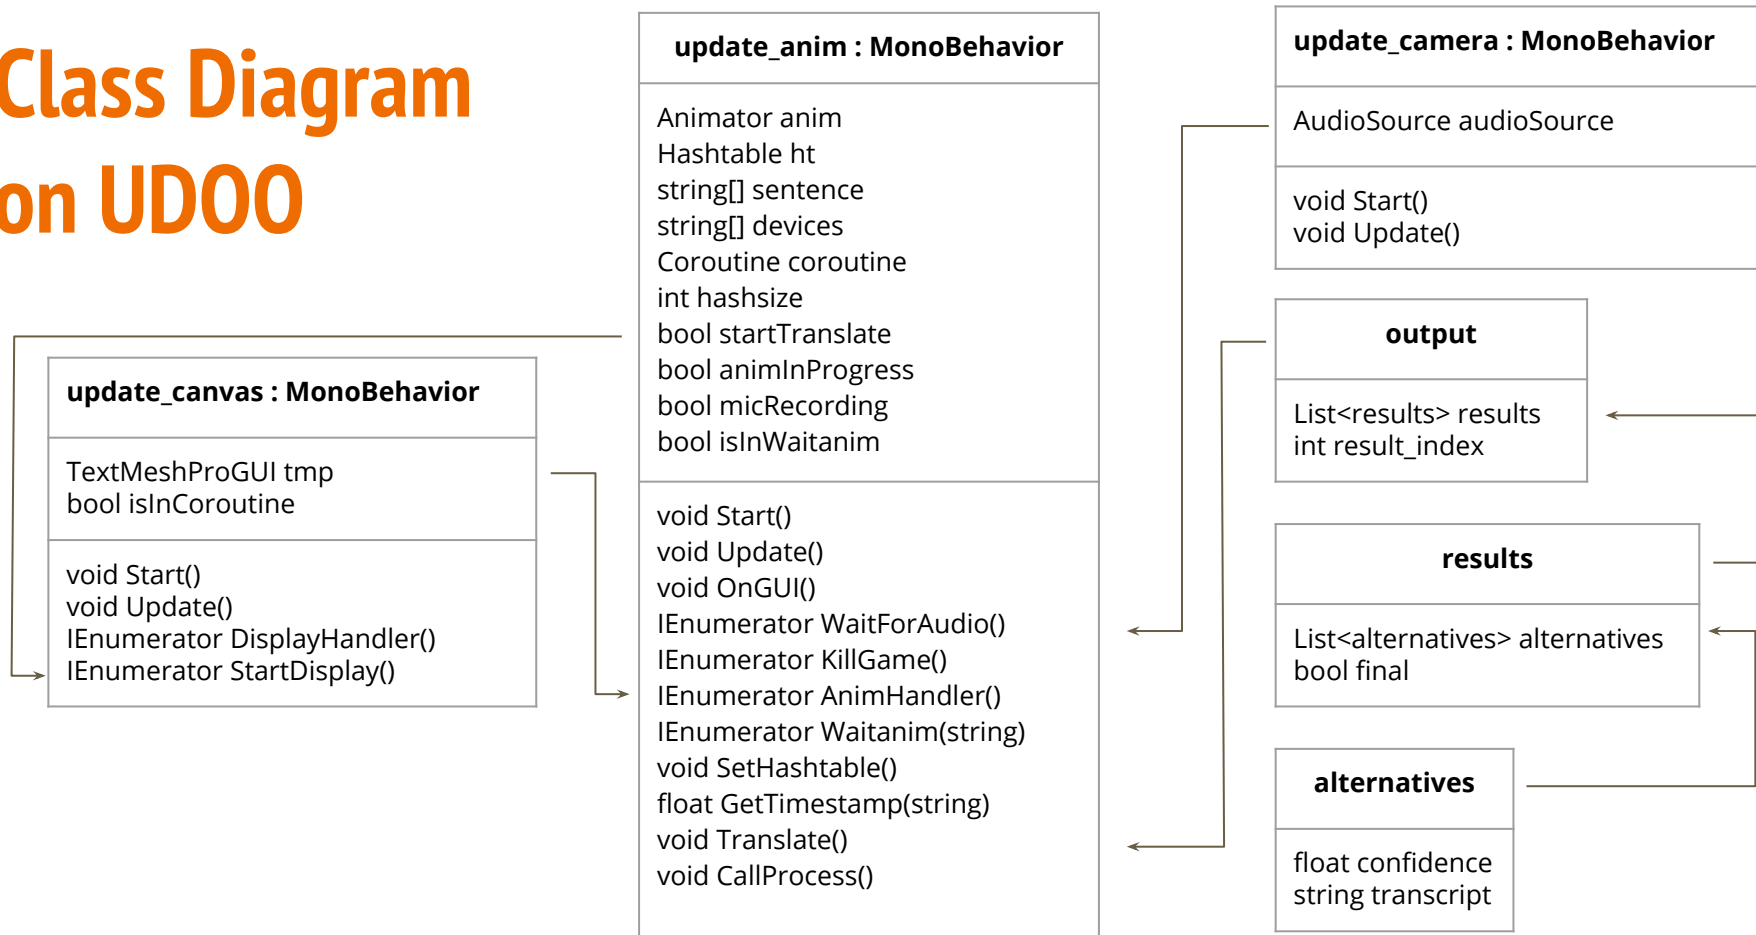

“IDLE” → <transition> → “HELLO”

Extra Internal Processes

- Vocabulary to Hashtable
 - To map each word to an animation.
- Microphone Module within Unity
 - To capture audio sounds from the microphone.
- Watson API request call for Speech to Text service
 - To generate a Speech to Text translation and store it in a JSON file.
- JSON Parsing
 - To transfer the translation from JSON to text file.
- OpenNMT Translation Call
 - To translate the translation from English to ASL.

Class Diagram on UDOO

Challenges & Issues - Hardware

- SBC architecture compatibility (**Solved**)
- FPGA - difficulty for soldering and programming given timeframe (**Solved**)
- USB Port (**Solved**)
- I²S compatibility for microphone (**Solved**)
- Lack of 3D printed enclosure
- Limited disk drive size

Challenges & Issues - Software

- Granularity-based OpenNMT (trial and error) (**Solved**)
- Bleu Score 3-/4- gram calculation (short sentences)
- Serial Communication between Udoo and Arduino (**Solved**)
- Utilization of command prompt within Unity (**Solved**)
- Finding compatible microphone software to interface with Unity (**Solved**)
