

Group IV

Multi Touch Poker Table_{MTPT}

Final Presentation

Nathaniel Boucher
Christopher Herod
Raeginald Timones

Project Description

- Multi-Touch screen to allow four users to enjoy a game of Texas Hold'em

Project Description

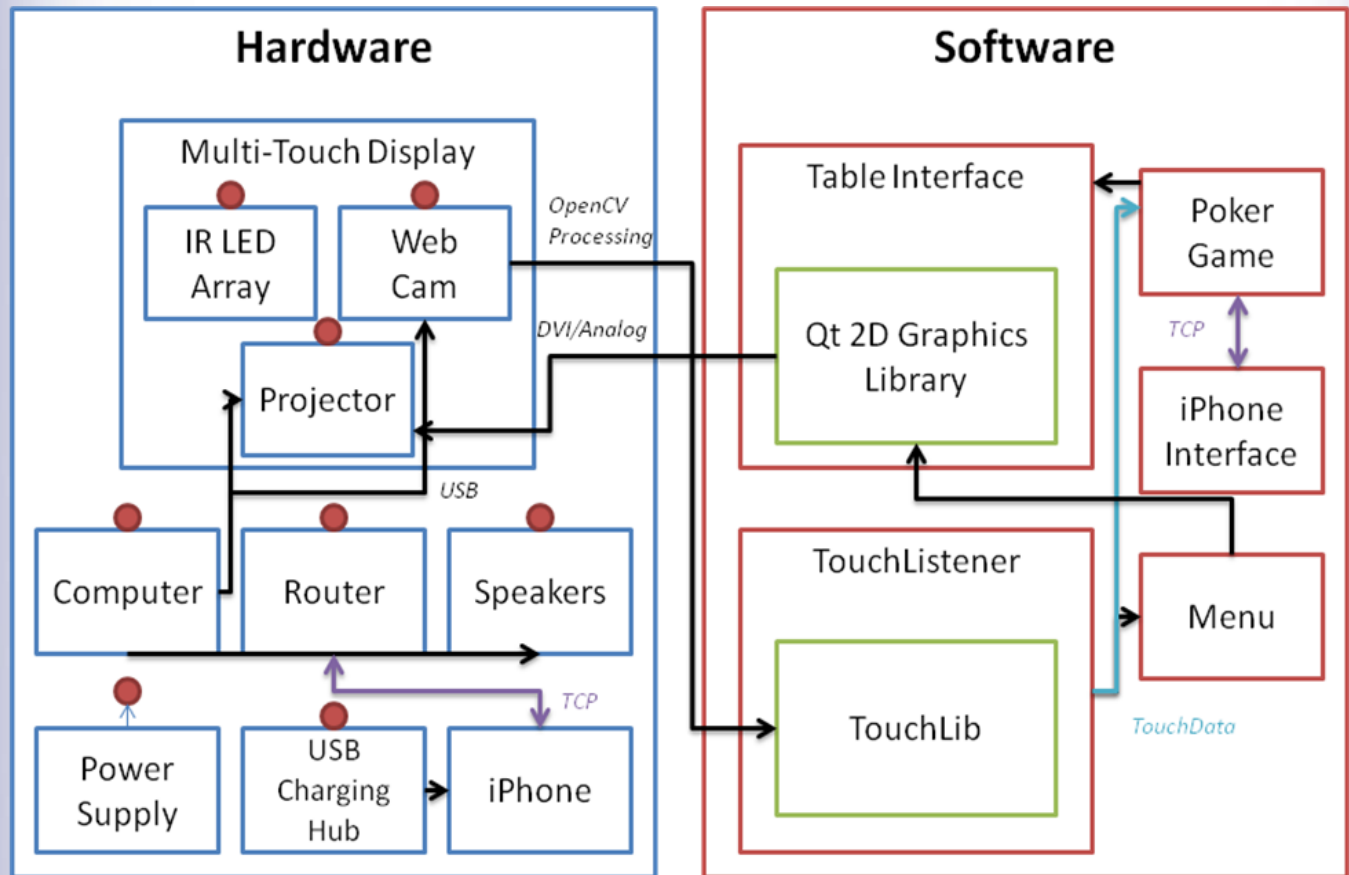

- Two cards will be sent to the players iPhone/iPod Touch application
- Players can then fold using application or bet using the touch screen table.

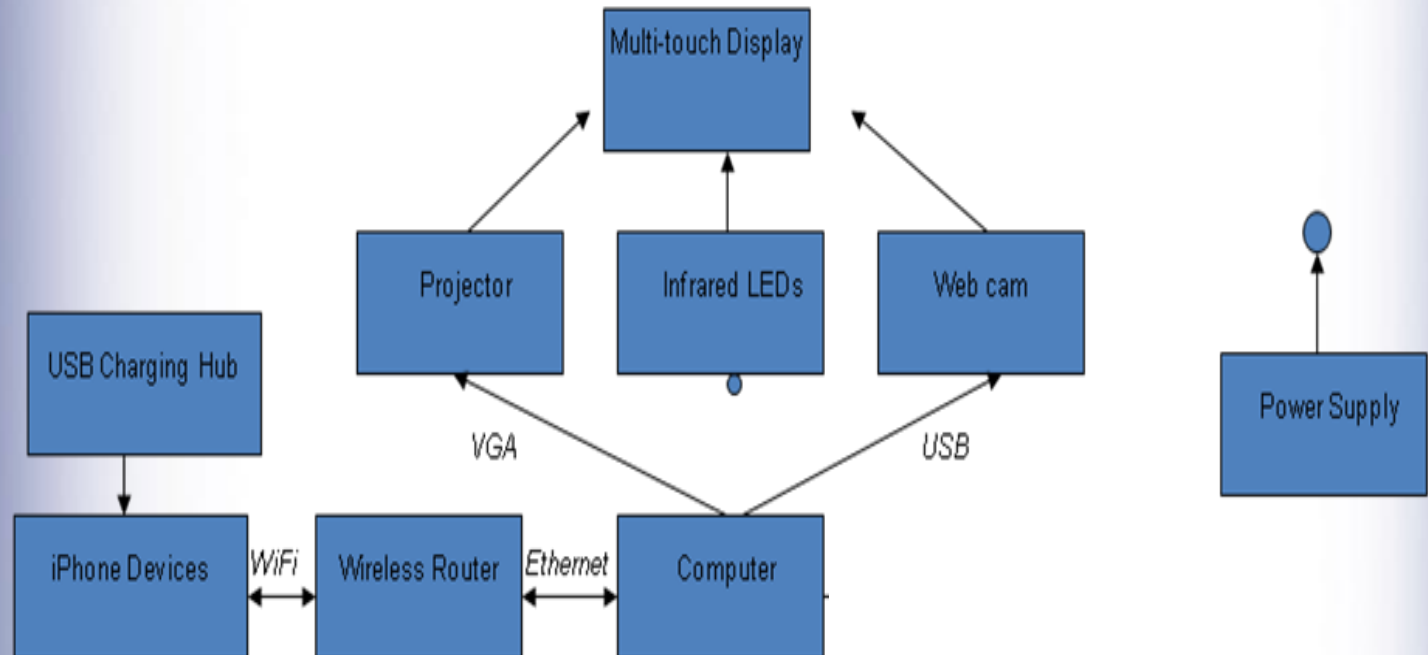

Goals and Objectives

- To explore alternative multi touch techniques
- To create an entity that will compliment a public environment such as a café or restaurant
- To learn basic constructs of iPhone development
- To become more proficient in C++ software development

System Block Diagram

Hardware Components

Framework

- GOALS
- Used in Coffee shop
- Phone holder with charging capability

- REQUIREMENTS
- 25" screen
- Height < 40"

Framework Build

- One 4'x8' sheet of Birchwood
- Two 1"x6" pieces of Pine

Multi-Touch Display

Goals

- High touch sensitivity
- Operation in bright and dark rooms
- Touch pressure sensitivity
- Low cost

Multi-Touch Technique

- FTIR
 - IR light flooded through Acrylic surface
 - High sensitivity
 - Long setup time

FTIR - Frustrated Internal Reflection

IR Camera

Display Build

- 70 IR LED's mounted in aluminum bracket
- 22"x17" acrylic sheet

IR Camera

- GOALS
 - Min. Touch response delay
 - High touch accuracy
- REQUIREMENTS
 - minimum resolution of 640x480
 - frame rate of at least 30 FPS
 - transfer data at a minimum of 480 Mbits/s

Product Description	Manufacturer/Website	Price \$	Procurement Status
Playstation 3 Eye, USB 2.0, 640 x 480 @ 60 fps 320 x 240 @ 120 fps	Dell	\$34.99	AQUIRED
Unibrai Fire-I digital camera, IEEE 1394 (FireWire), 640 x 480 @ 30 fps	Office Depot	\$104.99	
Xbox Live Vision Camera, USB 2.0, 640 X 480 @ 30 fps	Newegg.com	\$24.99	
Logitech Quickcam Communicate STX Web camera, USB 2.0, 640 x 480 @ 30 fps	Newegg.com	\$34.99	

IR Camera(cont)

- PROBLEM
 - Web cams record in visible light spectrum
 - We need camera to record in IR spectrum
- SOLUTION
 - Disassemble Web cam
 - Remove IR Filter
 - Install Bandpass Filter (Exposed Film)

IR Camera Build

- 3 different filters tested (Mag. Tape, CT film, Film Neg.)
- 2 pieces of Film Negative used

Temperature Control

- Requirement = compartment Temp < 90°F
- 2 Yate Loon Fans (120mm, 1650rpm, .3A)

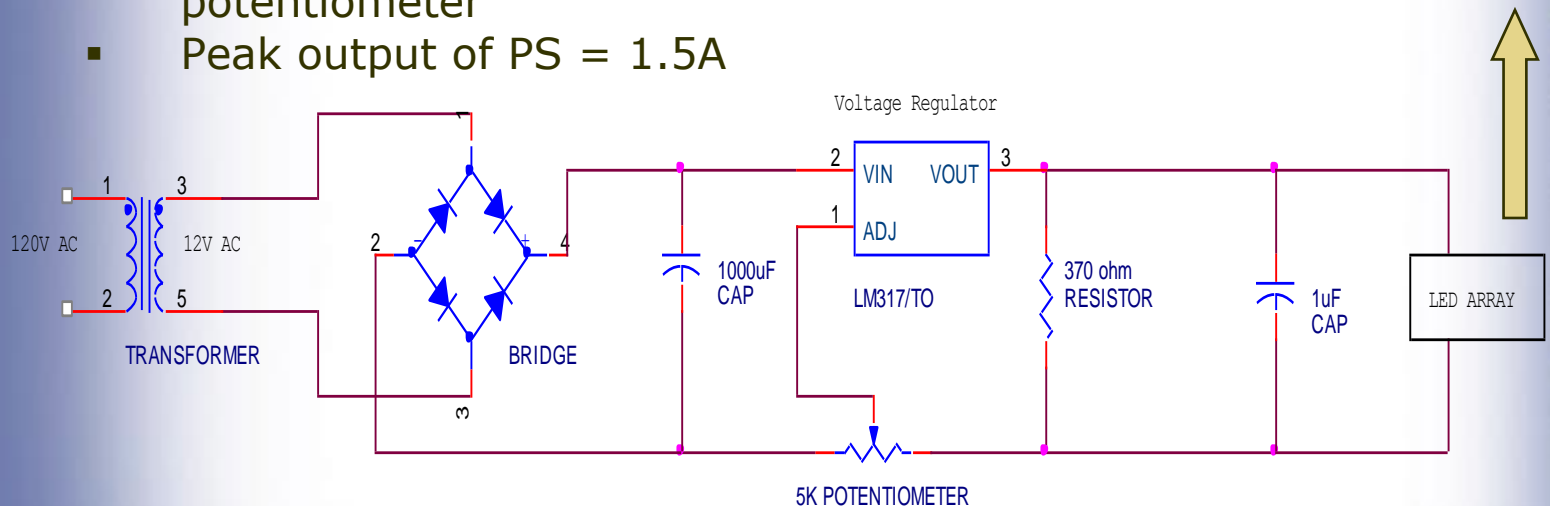

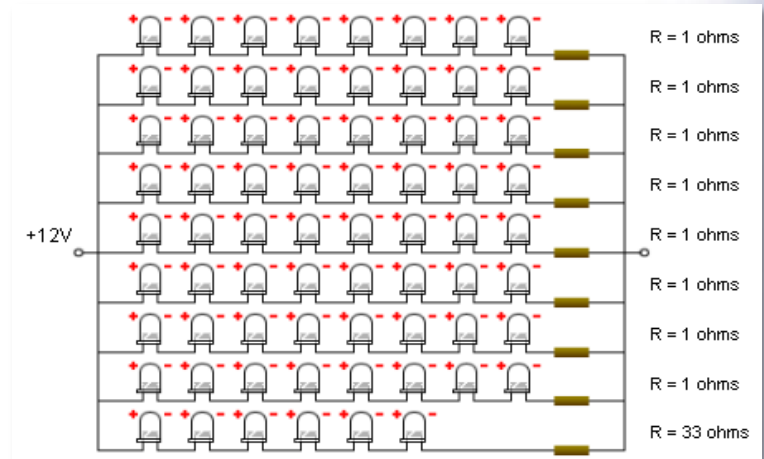

Temperature Control Build

- Originally grills were covered with speaker cloth
- Removed due to inadequate airflow

LED Power Supply

- 70 (100mW) IR LED's
- Using Ohm's Law and Voltage/Current divider
 - Total power dissipation = 10910 mW
 - Total current draw = 900 mA
- PS uses transformer, bridge rectifier, cap, voltage regulator, potentiometer
- Peak output of PS = 1.5A

Final Internal Layout

Software Requirements Specification Summary(updated)

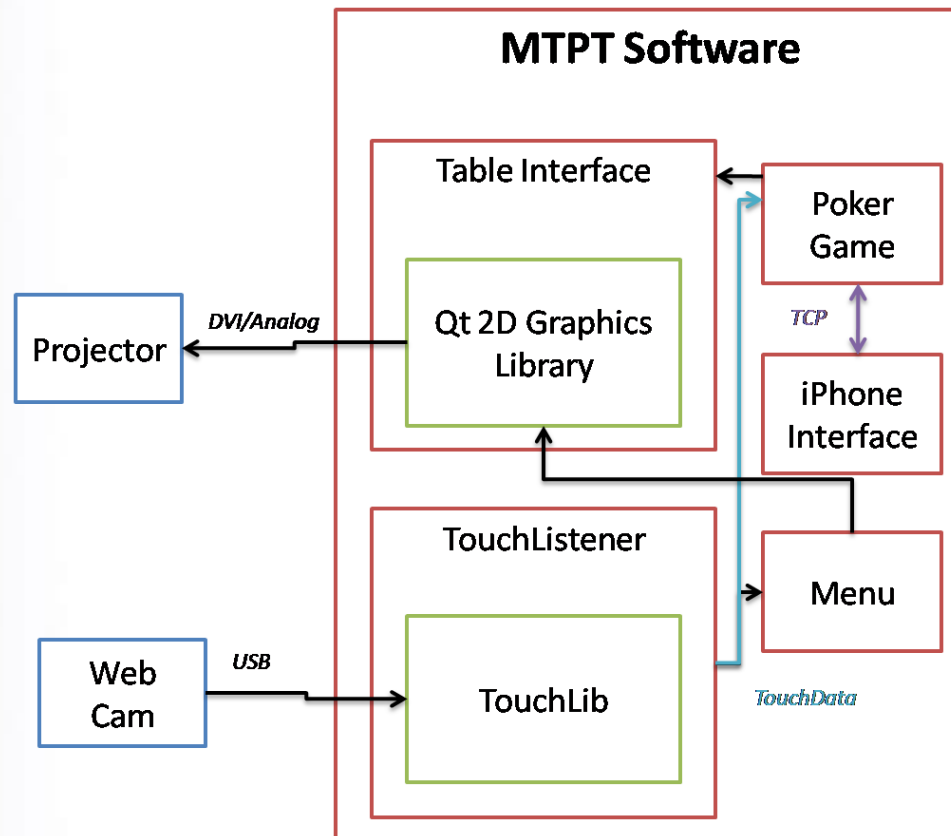

- Poker Game
 - The MTPT will support Tournament style No Limit Texas Hold'em Poker.
 - The game supports four players.
- Restaurant Menu
 - The menu can be viewed anytime during the game
 - Only one menu will be visible

Software Requirements Specification(cont.)

- Table Interface
 - Chips will be displayed on the table
 - Community cards will be displayed on the center of table.
 - The interface will display the game information during the course of the game
 - The interface will player actions with touch commands

Software Block Diagram

- Input-Captured image from webcam
- Output-Graphics on touch screen

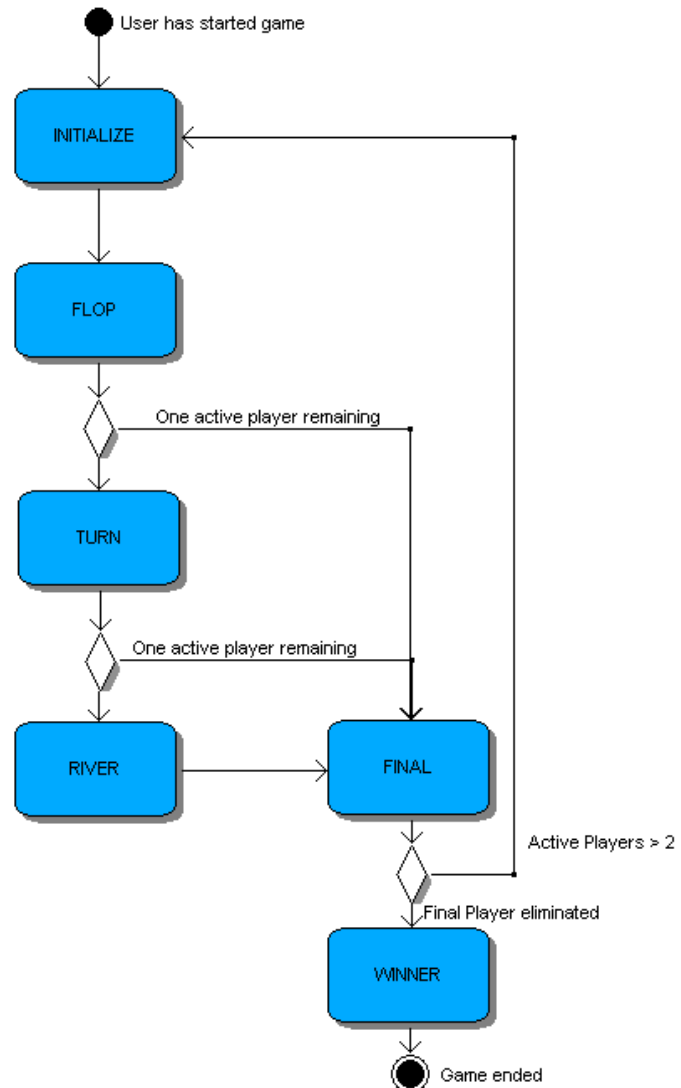

Software Libraries

- Qt (4.5.2)
 - Open Source C++ application and User Interface Framework
 - QGraphicsView, Threading, data types
- Touchlib
 - Processes input video from web cam
 - Sends touch events to application
 - E.g. “Finger Up, Finger Down”
- PokerSource
 - Poker card/hand representation
 - 64-bit Hand Mask
 - Poker hand evaluation

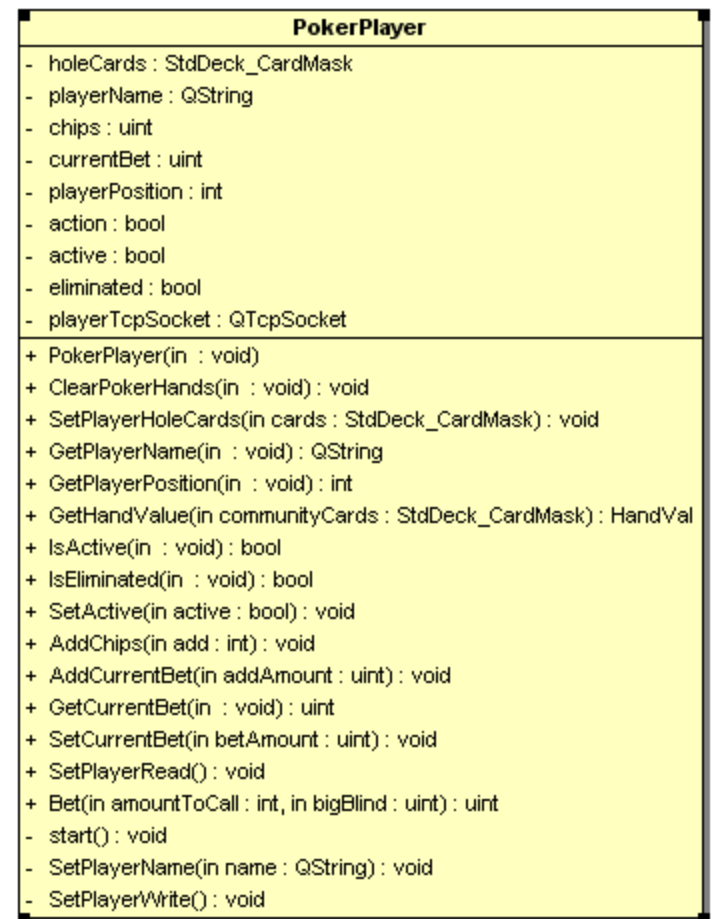

PokerExec Class

- State Machine
 - Used to control game state
 - Dependent on player actions
 - Runs per poker hand

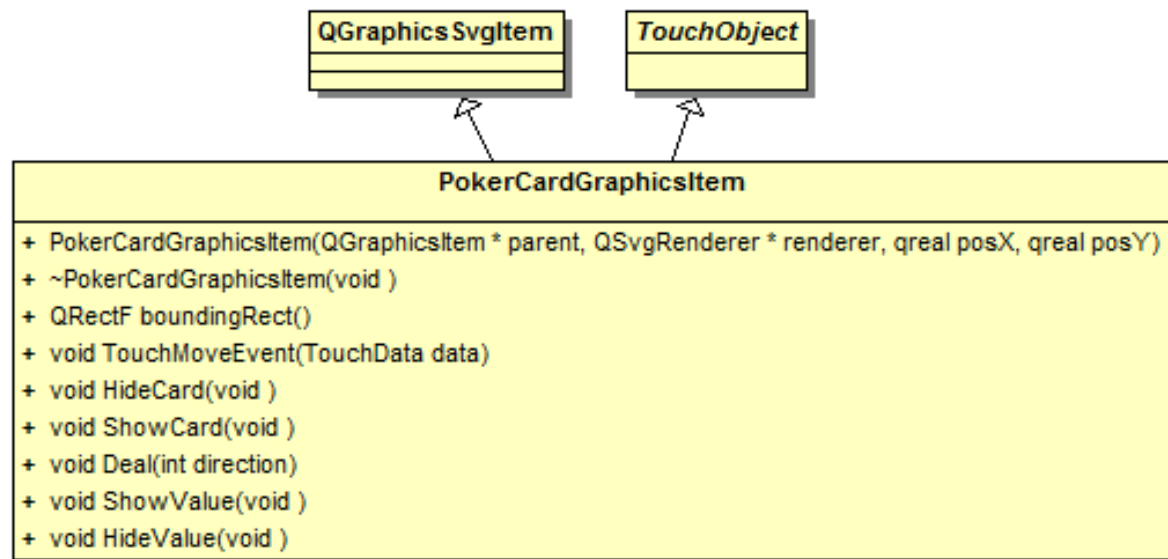

PokerPlayer Class

- Holds crucial game information for each player
 - Hole cards(value and graphics)
 - Total chips
 - Current Bet
 - State
- Four objects are implemented in PokerExec as an array of PokerPlayers
 - Index(0 to 3) will be used to keep track of positions

PokerCardGraphicsItem Class

- Originally planned to have card graphics as QGraphicsSvgItems(used on top of PokerSource types)
 - Particular can be called from the cards.svg file by passing a string(e.g. "queen_hearts")
 - Needed a better way to implement animations
- Main purpose of class is to animate dealt cards
 - player hole cards, community cards

TouchListener Class

- Implements Touchlib to handle touch events
 - fingerDown, Update, Up are virtual functions of ITouchListener
 - TouchData is passed to classes that implement the callback class TouchObject
 - TouchObject*'s are registered using RegisterTouchObject() function
 - Touches were handled in the fingerUpdate function as this was the most frequent function called during testing

TouchListener Implementation

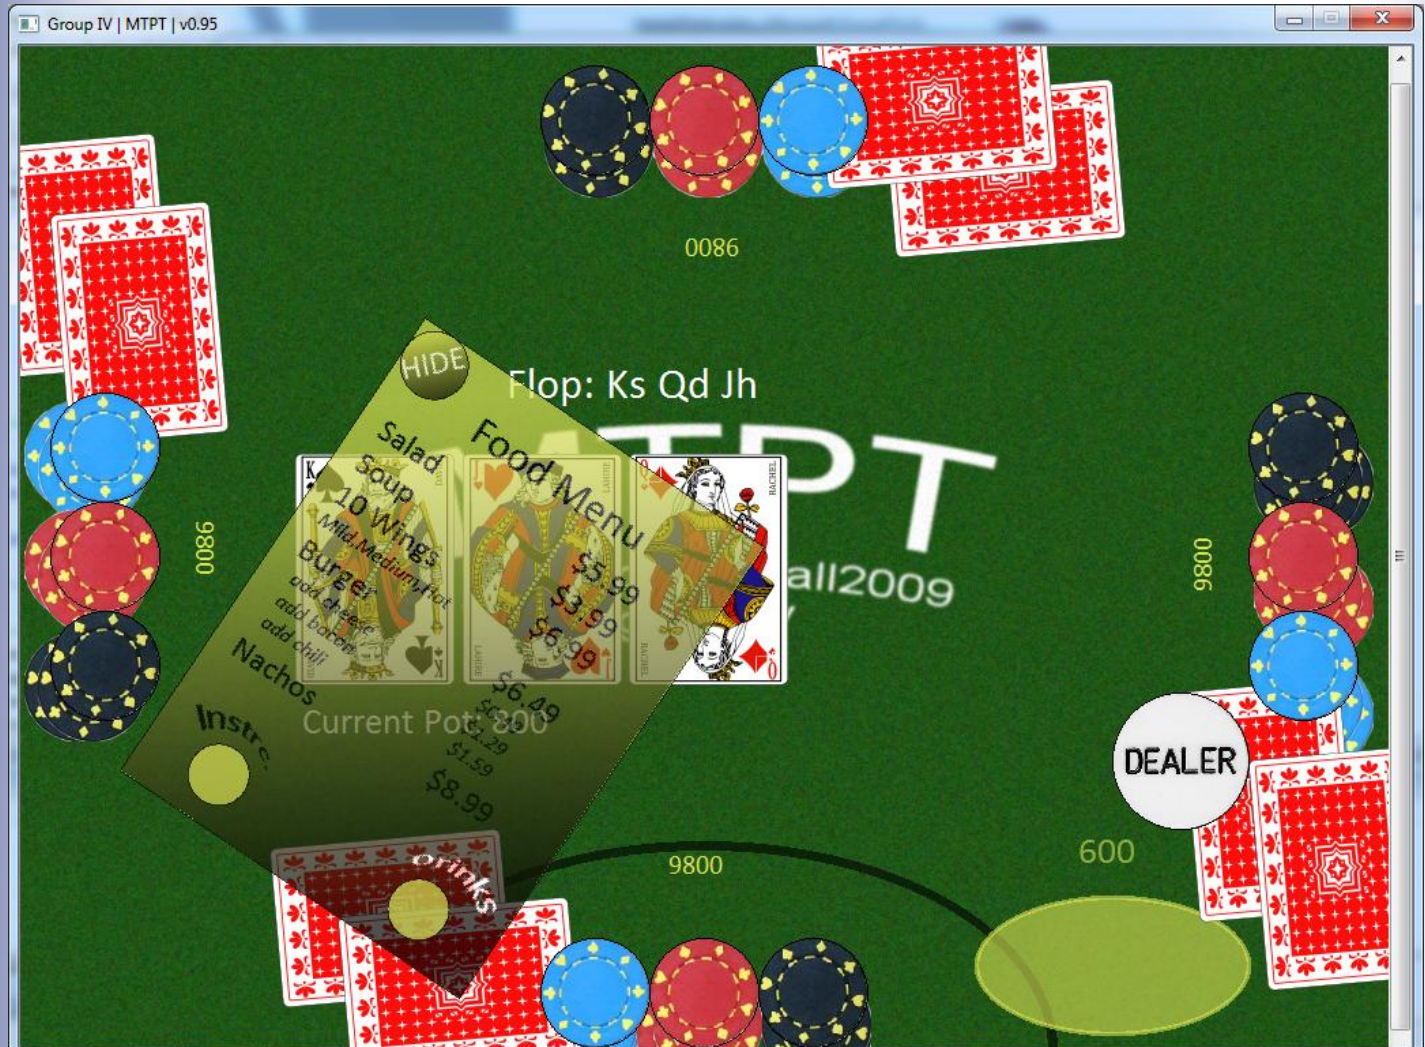

- Objects that wish to receive touch events inherit TouchObject interface class
 - One member, QRectF touchArea and pure virtual function TouchMoveEvent()
- TouchListener checks all registered TouchObjects and if the current touch is in bounds, the callback is called

<i>TouchObject</i>
+ QRectF touchArea
+ void TouchMoveEvent(TouchData data)

Software Development

- MTPT Software was developed using waterfall with prototyping after requirements and initial design in Senior Design I
- Prototyping was done throughout because of user interaction and uncharted territories(QGraphicsView and Touchlib)
- Software was developed in C++ using Visual Studio 2008

MTPT Interface

Player Interface

- Black outline is visible when the player is set to act
- Initial design wished the user to manually drag chips into yellow region, difficulty caused group to 'flick' chips to increment current bet
- Cards can be 'peeked' by touching

Software Issues

- Threading issues when hiding and showing QGraphicsItems manually
 - Solved by using Qt's SLOTS and SIGNALS
- Finding complete binaries of Touchlib that include both .dll and .lib
 - Older version was used
- Debugging with Touchlib
 - Web cam would not start process in Visual Studio debugger
 - If this were possible, group may have had better success in Touchlib integration

iPhone Development

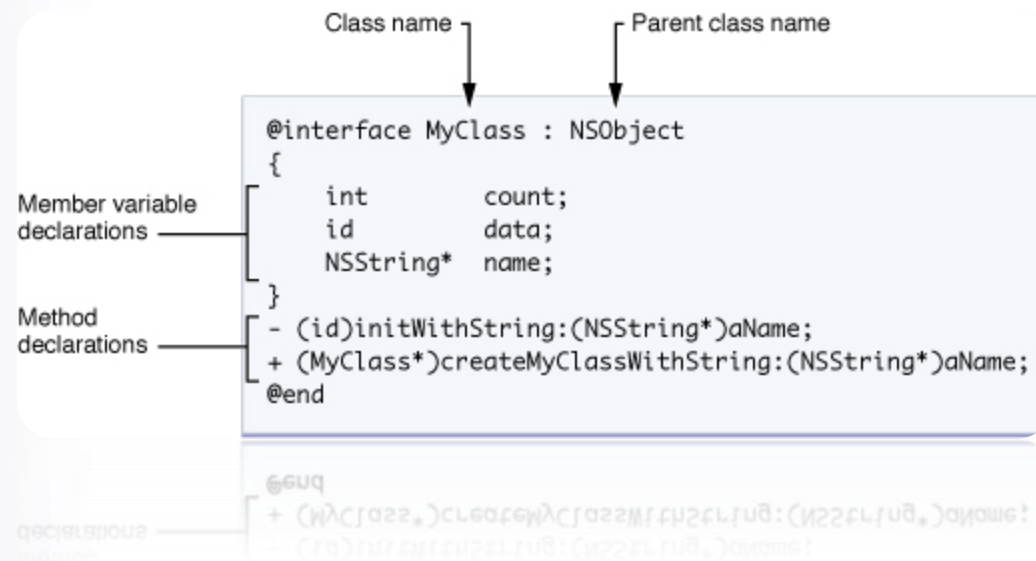

- Apple OS X 10.6 Snow Leopard
- XCode 3.1
- Objective-C 2.0

XCode Development

Objective-C 2.0

- Superset of ANSI C
- Adds objects and messaging

Communications

- Wireless
 - Router with DHCP
 - Not Ad-Hoc
- Connection Daemon
- Features
 - Location-based connection

iPhone Interface

iPhone Data Entry

Budget

- \$198 over budget due to projector
- Price per 100 units = \$69k

	QUANTITY	UNIT PRICE	TOTAL PRICE	BUDGET	OVER/UNDER
MULTI-TOUCH SCREEN					
DAP Silicione, 10.1fl oz.	1	\$4.50	\$4.50		
Rosco 20"x24"	1	\$12.00	\$12.00		
Acrylic Sheet, 17"x22"	1	\$63.90	\$63.90		
SUBTOTAL			\$80.40	\$100.00	-\$19.60
LED					
IR LED, 880nm	80	\$0.47	\$37.60		
SUBTOTAL			\$37.60	\$50.00	-\$12.40
INTAKE/EXHAUST FAN					
Yate Loon	2	\$4.99	\$9.98		
SUBTOTAL			\$9.98	\$10.00	-\$0.02
IR CAMERA					
Playstation 3 Eye	1	\$34.99	\$34.99		
SUBTOTAL			\$34.99	\$40.00	-\$5.01
POWER SUPPLY					
LED Power Supply Parts	1	\$5.00	\$5.00		
Perf Board	1	\$5.00	\$5.00		
Soder	1	\$3.00	\$3.00		
Power Cord Extention	1	\$10.00	\$10.00		
SUBTOTAL			\$23.00	\$10.00	\$13.00
PROJECTOR					
Mirror	1	\$5.00	\$5.00		
Projector Mount	1	\$25.00	\$25.00		
Optima EP719	1	\$300.00	\$300.00		
SUBTOTAL			\$330.00	\$150.00	\$180.00
FRAMEWORK					
Birchwood 4'x8'	1	\$39.00	\$39.00		
Wood Glue	1	\$3.00	\$3.00		
Pine 1"x6"	2	\$19.25	\$38.50		
Nails	1	\$2.00	\$2.00		
Screws	1	\$2.00	\$2.00		
Wheels	4	\$2.00	\$8.00		
SUBTOTAL			\$92.50	\$50.00	\$42.50
TOTAL			\$688.87	\$410.00	\$198.47
			x100		
Cost of 100 Units			\$68,887.00		

MTPT Demonstration
