Hardware components selected for our design.

3

## Administrative

Day-to-day activities that are related to financial planning, record keeping & billing.

● Part 1 ●

# Project Overview

---

A summary of our project management plans.

# Motivation

Porch pirates have become public enemy number one.

- In today's world, ordering packages and food from the internet is a way of life.
- Here in America, it turns out, 36% of people have experienced package theft.
- Many of these deliveries are stolen from front porches and building lobbies.

# Solution

Success Always Belongs For Those Who Are Prepared

- The application will be able to log authorized packages into S.M.A.C.'s database, unlock it from a remote location.
- S.M.A.C is designed to provide peace of mind for homeowners from package thieves.
- When the delivery is made, the delivery driver simply scans the item and places the item in the box, then closes the lid.
- S.M.A.C will integrate a lot of security and smart features to add value to the box.

# Team Members

Success Always Belongs For Those Who Are Prepared

**Shane Bramble-Wade**  
(CpE)

PCB, Lock, Barcode Scanner

Shane has a strong passion for computer hardware. He will be specializing in creating the PCB.

**Ty**  
**Rothenberg**  
(CpE)

MCU, Camera,  
Fingerprint Sensor

Ty has a passion for embedded systems. He will be working on the microcontroller and sensors.

**Andre Villaran**  
(CpE)

Power Systems, UV Light, Wi-Fi  
Module

Andre has a passions for network engineering. He will working on the different power systems and communication module.

**Tyler**  
**Guerrero**  
(CpE)

Mobile Application, RFID  
Sensor

Tyler will be creating the Mobile App to interact with our lock box.

# Goals and Objectives

Success Always Belongs For Those Who Are Prepared

**Security**

Packages will be locked and secure.

**Notifications**

A delivery notice will be sent to a user.

**Database Storage**

Database storage will be used for packages.

**Rigid**

Box will be bolted to the ground.

**Responsiveness**

Mobile app will interact with box.

# Requirements Specifications

S.M.A.C Project Requirements

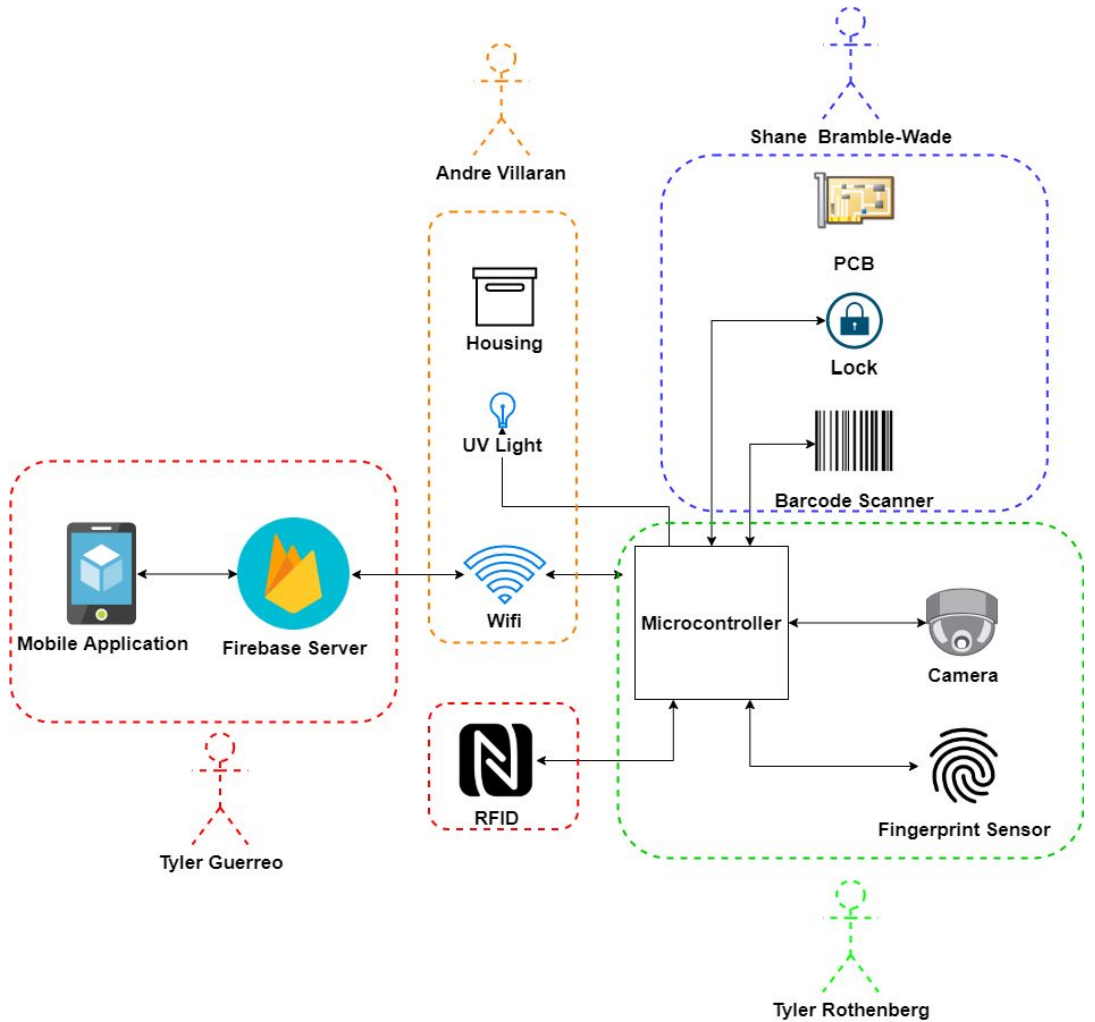

1. **Barcode Scanner Unlocks our S.M.A.C. system.**
2. **Unlocking our S.M.A.C. system via a RFID Card.**
3. **Unlock our S.M.A.C. system from a mobile application.**
4. **Enrolling and Unlocking our S.M.A.C. system via a Fingerprint Sensor.**
5. Using mobile application to take snapshot of scenery.

<b>Picture Format</b>	RAW RGB, RGB, YUV, YCbCr	RAW, YUV, RGB, JPEG	RAW, RGB, YUV
<b>Supply Voltage</b>	3.3V	5V	3.3V
<b>Size</b>	23.9 x 35.7 x 3 mm	34 x 24 x 3 mm	35.16 x 34.29 mm
<b>Manufacturer</b>	Waveshare	ArduCam	Waveshare
<b>Cost</b>	\$31.88	\$39.99	\$7.69

# Camera Selection - Ty

Camera will take a photo upon any unlock attempt

ArduCAM OV2640 Plus

Specifications	
Supply Voltage	5V
Operating Current	<140mA
Communication Interfaces	I2C & SPI
Max Resolution	1600 x 1200
Lens Size	¼"
Board Size	34 x 24 x 3 mm
Manufacturer	ArduCam
Output Format	•RAW •YUV •RGB •JPEG

ArduCAM OV2640 Plus Specifications

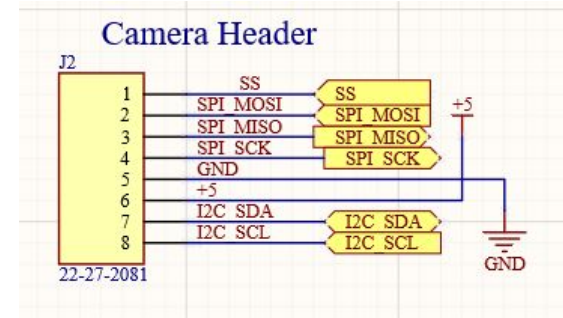

# Camera Schematic - Ty

Camera Pin header

Pin	Label	Type	Description
1	CS	Input	Slave select
2	MOSI	Input	Data output from master
3	MISO	Output	Data output from slave
4	SCK	Input	Serial Clock from master
5	GND	Ground	Power Ground
6	VCC	POWER	5V Power Supply
7	SDA	Bi-directional	Serial Interface Data I/O
8	SCL	Input	Serial Interface Clock

*Detailed Pinout*

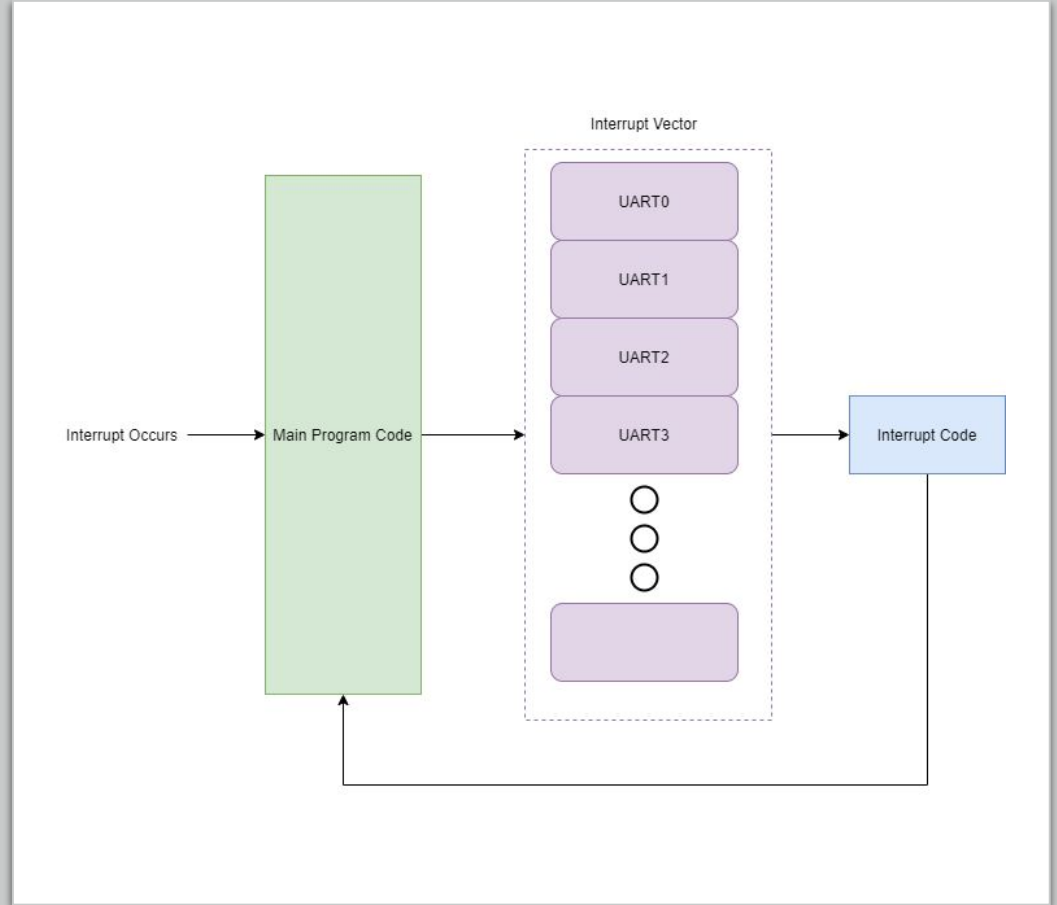

*Camera Pin Header*

# Arduino Software Design

Interrupts will be used throughout

- Working with many 3<sup>rd</sup> party libraries opens the door for compatibility issues
- Plan to use interrupts for our Components

# Barcode Scanner - Shane

Box will unlock when a valid package is scanned.

**DYScan DE2120**

**Waveshare Barcode Scanner**

**MG65 1D 2D Code Scanner**

Device	Voltage	Interface	Current	DOF	Price
<b>DYScan</b>	3.3V	UART	190mA	400mm	29.95
Waveshare	5V	UART	135mA	400mm	39.99
MG65	5V	UART	120mA	250mm	29.99

Left: 1D | Right: 2D

# Solenoid Lock - Shane

An electronic lock used to open or close our box.

Smartphone-controlled,  
Deadbolt Actuator

Smock

Morning Industry RF-01SN

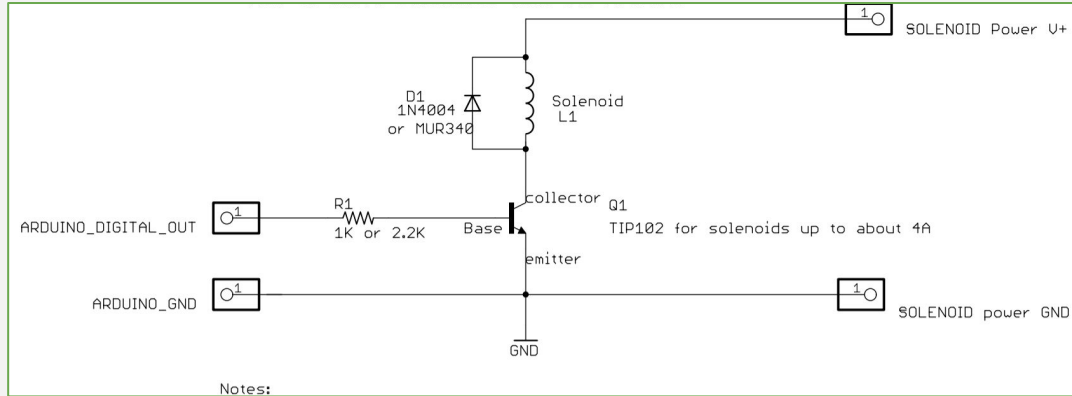

**AdaFruit Solenoid Lock**

- A supply voltage of 12V will be needed to energize our solenoid lock.
- A solenoid lock is commonly used in the tech field as an electronic lock, which provides a bunch of versatility and usability.

# Solenoid Lock - Shane

An electronic lock used to open or close our box.

Notes:

*Mechanism of Solenoid Lock*

- The lock solenoid draws 650 mA at 12V.
- For protection of the solenoid and other electrical components in our design, a Schottky diode is used.

# Solenoid Lock - Shane

An electronic lock used to open or close our box.

*3.3V Power Line*

*Spike generated after unlock on 3.3V power line*

## Power System Requirements - Andre

S.M.A.C. requires multiple components to work in harmony with a constant and steady voltage and current source to operate efficiently and securely. It also required a mix of multiple voltages to operate its plethora of devices. S.M.A.C. required the following voltages and currents to operate:

- 110-120V Power
- 12V
- 5V
- 3.3V
- Total of about 2A

# Power System Design -Andre

- With the many different voltages and extensive constant power requirement. It was decided to use an AC power source and convert the voltage to a DC source accordingly. satisfying our reliable and constant inflow of power.
- The design was simple 120V AC source would be turned into 12V 2A power source then stepped down to a 5V 2A power source and from the 5V we would use a step down converter to 3.3V.
- This design will give ease of use and constant security for the box. Which would accomplish its main goal.

## Communications Design - Andre

Communication was a huge part of the project. It had to allow for our device to have remote access and update its database remotely for ease of use and complete functionality of the box itself. The medium chosen is Wi-Fi as it allowed for remote and long range communication. The ESP32 was chosen for the following capabilities:

- 802.11 b/g/n
- SPI/UART/I2C/I2S
- 3.3V
- 150mbps
- Programmable

## UV light - Andre

UV light's functionality comes from the programming of the relay. The light was going to be controlled by a relay module attached to the power source making it a "smart" light. The UV light itself still needed to meet some criterias as there are ranges of UV lights that work for different uses. The following were the requirements:

- 184-254 nm wavelength
- UVC
- Cold cathode
- long lifespan

## Housing Inspiration - Andre

## Housing Goals - Andre

Housing was one of the most important aspects of the project. It would not only protect the boxes it would receive but also protect all its components that made it work. The following is a short list of goals the box needed to accomplish:

- Fit most boxes
- Secure
- Malleability
- Weatherproof
- Long lasting

## Housing Choices - Andre

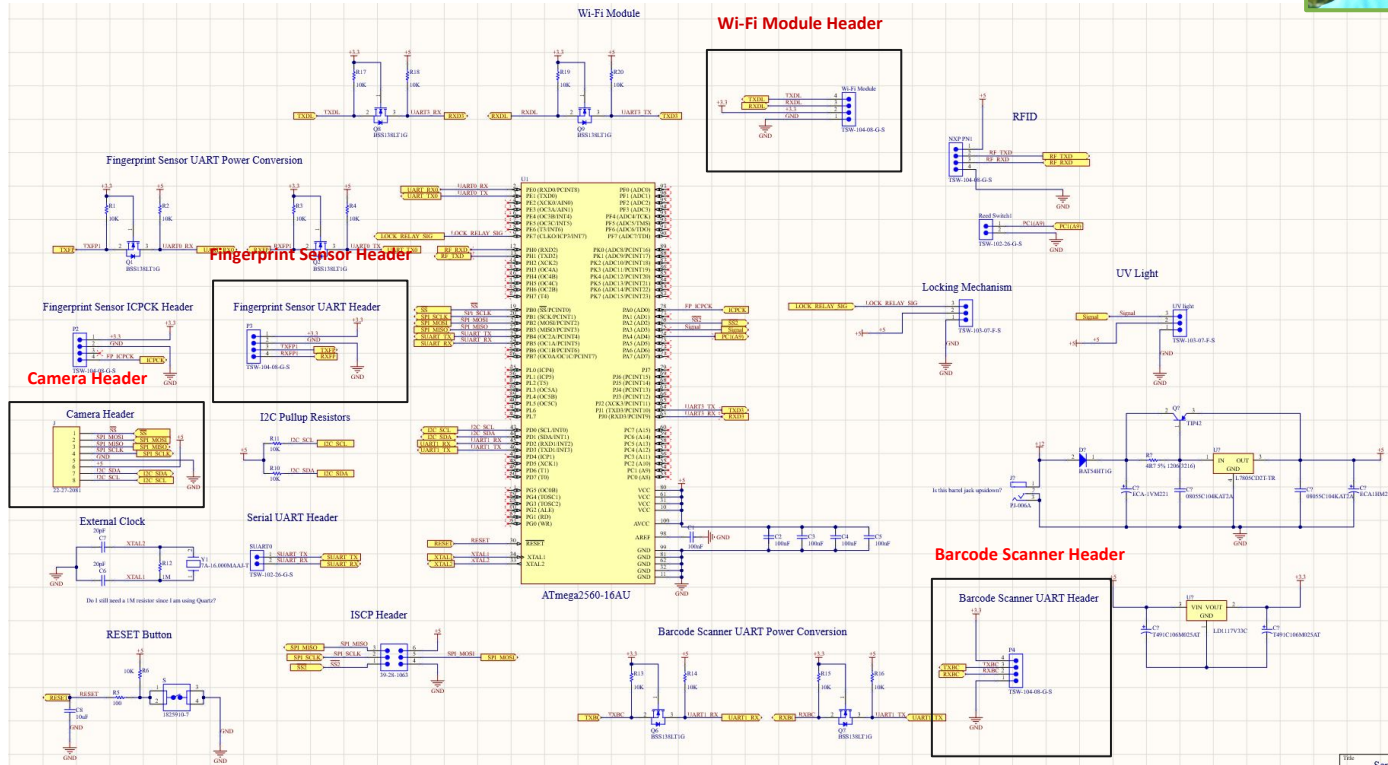

To accomplish all our goals extensive research had to be done to get the right dimensions and material to make the box. Research narrowed on a dimensions that would accommodate most boxes in the shipping industry. The material choice came down to how easy it would be to incorporate into the environment and malleability to work with. The narrowed specifications were as followed:

- Material: Wood
- Dimensions: 28 x 18 x 15

# Altium PCB Schematic

*Final PCB*

# Android Operating System

- An open source Linux-based operating system that was released on November 5, 2007
- With Android you can either choose kotlin or java, we chose java.
- Java is one of the most used programming languages, so the resources to develop with Java are immense, which makes the process to develop smooth.
- With android development it provides a multitude of reasons to use it, some of the following below are the reasons we valued the most.
  - Zero/negligible development cost
  - Open Source
  - Multi-Platform Support

android 

## Login Graphic User Interface

## Register Graphic User Interface

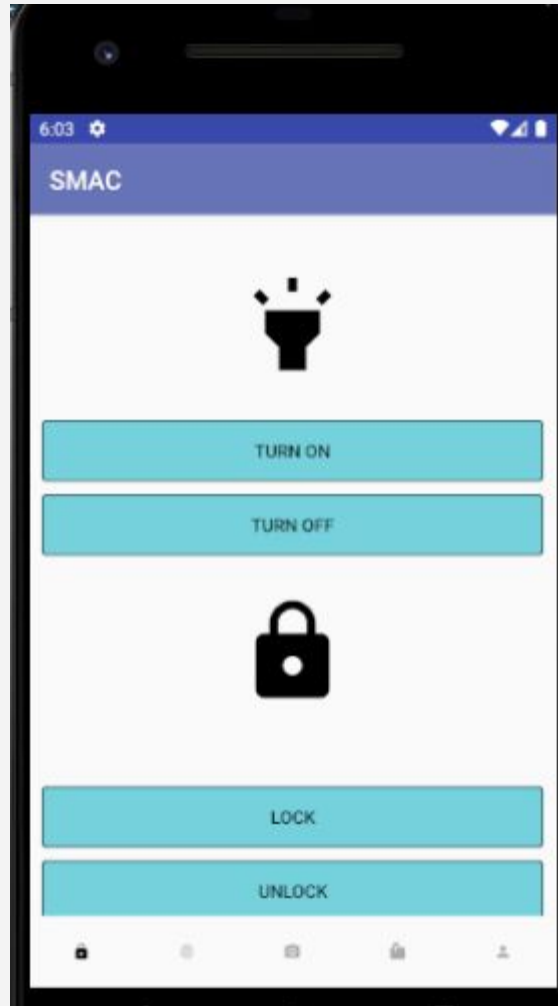

The image shows a mobile application registration screen. At the top, the status bar displays the time 4:43, a settings icon, and signal/battery indicators. Below the status bar is a purple header with the text "SMAC". In the center of the screen is a black icon of a person with a box. Below the icon are seven light blue input fields, each with a label: "Username", "Phone Number", "Email", "Password", "City", "State", and "Address". At the bottom of the form is a light blue button labeled "REGISTER". Below the button is the text "Already a user ? Login".

## Mobile Application Features

- Delivery Log
- Profile
- Lock/Unlock your SMAC
- See a Photo capture after the box was unlocked
- UV Light

# DataBase Diagram

# Use Case Diagram

# FireBase Cloud Functions

- A serverless framework that lets you run your backend code with responses from your databases and HTTPS request.
- In SMAC we used this framework to mainly communicate when a user would send request to our ESP32 or when we would want to send a response to our user.
- Our javascript server side code was stored in google cloud servers and was maintained and ran by google. We just used the platform to use their services

Cloud Function  
for Firebase

# Rest API

- For our project we create REST API's for all our features to properly communicate with our ESP32 to our app.
- With doing a REST API it provided us powerful functionality that made it possible to do the features we did.
- For example we used HTTP request to send our image byte array to upload it to firebase storage to display it on our app.
- For our Unlock/Lock, BarCode Scanner, RFID, and our camera they all had individual REST API's for proper communication between the app and the ESP32.
